ARISTOTLE'S ETHICS.

VOL. I.
THE

ETHICS OF ARISTOTLE

ILLUSTRATED WITH

ESSAYS AND NOTES.

BY

SIR ALEXANDER GRANT, BART., M.A., LL.D.

PRINCIPAL AND VICE-CHANCELLOR OF THE UNIVERSITY OF EDINBURGH; HON.
MEMBER OF THE DEUTSCHE MORGELANDISCHE GESELLSCHAFT; SOMETIME
DIRECTOR OF PUBLIC INSTRUCTION IN THE BOMBAY PRESIDENCY;
AND FORMERLY FELLOW OF OXFOR COLLEGE, OXFORD.

THIRD EDITION, REVISED AND PARTLY REWRITTEN.

IN TWO VOLUMES.

VOLUME THE FIRST.

LONDON:
LONGMANS, GREEN, AND CO.
1874.
Harvard College Library
June 29, 1897
From the Estate of
Prof. G. M. Richardson.

(I, II)
PREFACE

to

THE THIRD EDITION.

In the present Edition the following alterations occur:

Essay I. has been rewritten, chiefly in reference to the Authorship of the Eudemian Ethics, and of Books V. VI. VII. of the Nicomachean Treatise.

Essay II. has received additions and modifications, especially in reference to Grote's paradox—that the Sophists were not sophistical.

The account of Plato's Ethical system in Essay III. has been somewhat expanded.

The beginning and the latter part of Essay IV. have been slightly changed.

Several additions have been made to Essay V.

The Author's theory of the Semitic origin of Stoicism has been more fully drawn out in Essay VI.

Essay VII. has been rewritten, and some reference made in it to contemporaneous speculations in Ethics.
Appendix B has been written anew, in answer to the monograph of Dr. Bernays on ‘The Dialogues of Aristotle.’

The Notes to the Nicomachean Ethics have been completely revised.

The Second Edition of this work was under considerable obligation to John Purves, Esq., Fellow of Balliol College, Oxford, who, in the Author's absence, carried it through the press, introduced some minor improvements into the Notes, and added Indexes II. and III.

It may be mentioned here that the Index Verborum to the Nicomachean Ethics given in Vol. II. is the work of John Keble (author of the Christian Year), having been made by him for Cardwell's Edition (Oxford, 1828).

Edinburgh:

November 16, 1874.
CONTENTS OF THE ESSAYS.

ESSAY I.

On the Nicomachean Ethics, in relation to the other Ethical Writings included among the Works of Aristotle.

Results of Modern Criticism on the 'Works of Aristotle' .................................................. 1
Chronology of the Life of Aristotle ......................................................................................... 2
Incompleteness of his Writings ............................................................................................... 4
Strabo's Story of the Fate of his Writings .............................................................................. 5
Examination of this Story ....................................................................................................... 6
The Recension of Andronicus ................................................................................................. 8
The Catalogue of Diogenes Laertius ...................................................................................... 9
The Peripatetic School after the Death of Aristotle .............................................................. 11
Works forged to bear his Name ............................................................................................ 14
His lighter Works lost ......................................................................................................... 15
Principles on which the Edition of Andronicus was made .................................................... 17
The Four Ethical Treatises among the 'Works of Aristotle' ................................................... 18
The Theory of Spengel as to their respective Authorship ......................................................... 19
The Nicomachean Ethics a Genuine Work ........................................................................... 20
Characteristics of the Eudaimian Ethics ............................................................................... 22
Ancient Authorities as to their Authorship ......................................................................... 30
Characteristics of the Great Ethics ....................................................................................... 33
The Tract On Virtue and Vices ............................................................................................ 38
Origin of the Names Nicomachean, Eudaimian, and Great Ethics ........................................ 39
Traces of an Editorial Hand in the Nicomachean Work ........................................................ 42
This Work not a Congeries of Smaller Treatises ................................................................. 45
Mode of its Composition ....................................................................................................... 46
CONTENTS OF

Authorship of Books V. VI. VII. .................................................. 49
Supposed References to them in other Works of Aristotle ........... 51
Their Correspondence with the Eudemian Ethics ......................... 56
Casaubon's Theory of Book VII. .................................................. 63
Fritzsch's Theory of Book V. ..................................................... 64
The Eudemian Ethics not a Parallel to the Laws of Plato ............... 68
The Nicomachean Ethics an Unfinished, or Mutilated, Treatise
supplemented by the Peripatetic School ................................... 69
Order of Aristotle's Writings ..................................................... 70

ESSAY II.

On the History of Moral Philosophy in Greece previous to Aristotle.

Aristotle himself gives no History of Moral Philosophy .......... 72
Sketch given in the Great Ethics ............................................ 73
Three Eras of Morality .......................................................... 74
The First or Unconscious Era .................................................. 77
General Characteristics of the Hellenic Morality ..................... 80
Elements of the Popular Moral Teaching in Greece ................. 81
The Morality of Homer .......................................................... 83
The Morality of Hesiod .......................................................... 85
The Seven Wise Men ............................................................. 88
The Morality of Solon ............................................................ 89
General Character of the 'Gnomes' ......................................... 90
Theognis of Megara ............................................................... 91
Simonides of Ceos ................................................................. 94
The Morality of Pindar ............................................................ 96
The Morality of the Attic Dramatists ..................................... 98
Influence of the Mysteries ..................................................... 99
General Conceptions of the Good ............................................ 101
Moral Opinions of the Pythagoreans, Heraclitus, and Democritus ... 102
Second Era of Morality, the Sophists .................................... 103
Grote's Defence of the Sophists ............................................. 104
History of the word 'Sophist' ................................................ 105
General Opinions entertained of the Sophists in the 4th Century, B.C. ..... 112
The Sophists as Teachers ..... 117
Their Teaching for Money ..... 118
The Sophists as Authors of Rhetoric ..... 121
The Schools of Rhetoric among the Sophists ..... 122
The 'Greek' School of Rhetoric—Protagoras, Prodicas, and Hippias ..... 122
The 'Sicilian' School—Gorgias, Polus, and Alcidamas ..... 124
The Place of Rhetoric historically ..... 126
Internal Character of Rhetoric ..... 126
The Fallacies of the Sophists ..... 128
Change in Plato's Mode of representing the Sophists ..... 129
The Earlier Sophists Rhetorical, the Later Ones Eristical ..... 131
The Eristic of the Sophists ..... 132
The Philosophy of certain Sophists—Protagoras ..... 133
The Philosophy of Gorgias ..... 136
The Sophists in relation to Ethics ..... 141
Their Teaching Virtue ..... 143
The Fable of Prodicas ..... 144
The Moral Teaching of the Sophists either Rhetorical or Sceptical ..... 145
Casuistry of the Sophists ..... 147
Their Opposition of 'Nature' and 'Convention' ..... 148
History of this Doctrine ..... 149
Application by the Sophists of this and other Principles ..... 150
Aristotle's View of the Sophists ..... 151
Summary with regard to the Sophists ..... 152
Third or Conscious Era of Morality ..... 154
Uncertainty about the Doctrine of Socrates ..... 154
Personal Traits of Socrates ..... 155
His 'Supernatural' Element ..... 155
The 'Irrity' of Socrates ..... 156
The Statements of Aristotle regarding him ..... 157
Aristotle's Account of his Method ..... 158
Was Socrates the 'First Moral Philosopher'? ..... 159
Did he divide Science into Ethics, Physics, and Logic? ..... 160
Did he believe in the Immortality of the Soul? ..... 161
CONTENTS OF

Socrates as a Teacher of Youth .......................... 163
His Doctrine that Virtue is a Science ............... 164
His Want of Psychology .................................. 167
His Moral Paradoxes ...................................... 168
His Dialectic contrasted with that of the Sophists .... 169
The Socratic Schools ...................................... 170
Relation of the Cynics and Cyrenaics to Socrates .... 171
Spirit and Doctrines of the Early Cynics ............. 172
The Cyrenaic System of Ethics ......................... 173
The Cyrenaic Doctrine of Pleasure .................... 174
Relation of the Doctrine to Plato and Aristotle ...... 175
Influence of the Cyrenaic School ....................... 176

ESSAY III.

On the Relation of Aristotle's Ethics to Plato
and the Platonists.

Importance of Plato in the History of Philosophy .... 178
Characteristics of the Dialogues of Plato ............ 179
Aristotle as the Successor to Plato ................... 181
The Ethics of Plato .................................... 182
His Contribution to Psychology ....................... 183
His Doctrine of the Unity of the Cardinal Virtues .... 184
His Identification of Vice with Ignorance .......... 186
His Eschatology ......................................... 187
General Advance upon his Doctrines made by Aristotle 188
Doctrines in the Ethics of Aristotle that are borrowed from Plato:
  (1) On the Nature of Politics ......................... 189
  (2) Of the Chief Good ............................... 190
  (3) Of the Proper Function of Man ................ 191
  (4) Of the Divisions of the Mind ................... 192
  (5) Of the Mean' ................................... 192
  (6) Of 'Thought' in relation to the Moral Nature .... 192
  (7) Of Pleasure ..................................... 194
  (8) Of Friendship ................................... 196
  (9) Of the Relation of Ignorance to Vice ........... 196
  (10) Of the Excellence of Philosophy .............. 197

ESSAY I.

On the Nicomachean Ethics, in relation to the other Ethical Writings included among the Works of Aristotle.

The question of the genuineness and of the literary character of each of the several works which have come down to us under the name of Aristotle, has been mooted and discussed with increasing earnestness during the last half century. By the diligence of modern critics, for the most part Germans, the whole field of Classical, Patristic, Alexandrian, Byzantine, Arabian, Jewish, and Scholastic literature has been searched, and every fragment, reference, allusion, or mention, however incidental, everything in short bearing even remotely on the question, has been carefully collected and brought to light. Of all this labour we may say, in brief, that the general outcome and result has been to show: first, that external authorities are seldom in themselves decisive, but require to be checked in comparison with each other, and to be weighed against internal evidence; secondly, that many of the problems which have been started about Aristotle and the Aristotelian writings cannot be resolved with certainty, and must be left in the region of the indeterminate; thirdly, that these problems are for the most part comparatively unimportant, as for instance those relating to the character of the ‘lost writings’ of Aristotle, or to the
ESSAY I.

genuineness of some of the smaller treatises or of particular portions of works otherwise acknowledged to be genuine; *fourthly*, that a general consensus ratifies, and nothing seriously impugns, the belief, that in the leading portions of the great treatises which make up 'our edition' of Aristotle we possess the thought of the philosopher pretty nearly in the form under which it came from his own mind and was given originally either to his own disciples or to the world.

The several ethical treatises which we find included among 'the works of Aristotle' exemplify in a remarkable way the above-stated conclusions, and an examination of them, with the assistance of all available clues whether internal or external, serves to throw an interesting light upon the philosophical history of the Peripatetic School. But, in order to the due conducting of such an examination, it will be necessary beforehand to briefly sum up and set forth the results of such parts of the controversy upon the writings of Aristotle in general as bear upon the special questions, with reference to the ethical treatises, which we shall find before us.

With regard to the personal life of Aristotle, it is enough for present purposes to observe that we know with tolerable certainty two points,—namely, that Aristotle died O. 114. 3 (B.C. 322), being about 63 years old, and that for 13 years previous to that date he had held a school in the Lyceum at Athens.1 Holding to these points we may for the present leave in abeyance the various questions which have been

---

1 See an extract from the Chronology (Χρονολογία) of Apollodorus, given by Diogenes Laertius (v. i. 9). This Apollodorus has been generally considered a trustworthy authority, but of late doubt has been thrown upon his statements regarding Aristotle by Valentine Rose, who treats all the dates given by him, except those above mentioned, as the mythical filling in of what was really blank. (*V. Rose de Aristotelis librorum ordine et auctoritate*. Berlin, 1854.)
mooted about other parts of the life of Aristotle, as for instance whether he passed an irregular or a steady youth; whether he began the study of philosophy early or late; whether he was really a disciple in the school of Plato for twenty years, or for a shorter period, or was only a reader and critic of Plato's writings and an occasional hearer and personal friend of Plato himself; whether he 'tried his 'prentice hand' in philosophy by writing dialogues\(^2\) in somewhat weak imitation of Plato's manner of writing, and whether the dialogues of this kind which Cicero read and admired were really written by Aristotle, or were all forgeries. These and other questions of the kind might all be answered either one way or the other without affecting our judgment on the ethical treatises which have borne the name of Aristotle.

With regard to the literary career of Aristotle we may admit that we have no certain information. But the general opinion has been that those of his works which have been preserved were all composed during the last 13 years of his life, when he was holding his philosophical school in the Lyceum. And, with regard to the great majority of the extant writings of Aristotle, internal evidence is not opposed to this view. For these books may be stated broadly to be quite homogeneous. They belong to one period of the philosopher's mind. Though most of them have all the freshness of original speculations and enquiries, still they are expressed in a settled and peculiar terminology, which must have been beforehand gradually formed and adopted by their author during a long life of thought. It is only in minute points that a development of ideas or of modes of expression can be traced by comparing different

\(^2\) On this point a word or two will be said in Appendix B.
parts of these works with each other. And another argument for the same hypothesis is to be found in the unfinished character of so much that bears the name of Aristotle.

If we could fancy that Thucydides, instead of writing the history of the Peloponnesian War alone, had undertaken to narrate a dozen different periods in a dozen totally separate works, and had left these at his death almost all unpublished and in different stages of completion, but all indicating by their several openings the grasp which their writer had attained over each of the periods to be treated, we should conceive of such a result in history as would have been analogous to the actual result in philosophy exhibited by the works of Aristotle. We see here vastness of conception, organic distribution of human knowledge into its various departments, the ground plan laid for the complete exposition of each of these several departments, and then the indications of premature arrest stamped upon many of these great designs. But in one point our imagined parallel would fail. For Aristotle must not be represented as a man of letters, composing books within his own study; rather we must picture him as a teacher, all whose multifarious activity, all whose enquiries and conclusions, original and tentative as they often were, all whose summing up of the results of knowledge and thought, were in relation with the daily life of a school engaged in prosecuting under their master’s guidance the same lines of philosophical speculation. To remember that Aristotle, during his great period of productiveness, was not only writing but teaching, and that his school was probably meant to be associated, and actually to some extent took part, in the composition of his works, will be an important element towards estimating the character of his remains. We shall return to this consideration, but
in the meantime certain data of external evidence have to be examined.

The first of these is the celebrated story of the fate of the writings of Aristotle, given first by Strabo, and afterwards repeated by Plutarch. This story is as follows:—The library and MSS. of Aristotle came, at his death, into the possession of Theophrastus (who continued for 35 years chief of the Peripatetic School at Athens), and when Theophrastus died, the whole joint collection containing the original works of both philosophers, and all the books of others they had respectively bought, went by bequest to Neleus, a philosophical friend and pupil of Theophrastus, and were by him carried off to his own home at Seepsis. A generation after this occurrence, the kings of Pergamus began collecting books for their royal library, and the heirs of Neleus, in order to save the precious collection which was in their possession, but of which they themselves could make no use, from being seized and carried off to Pergamus, concealed it in a cellar, where it remained, a prey to worms and damp, for nearly 150 years. At the end of that time, the Attalid dynasty at Pergamus was at an end (the last of these kings, Attalus, having died in 133 B.C., bequeathing his kingdom to the Romans). The then possessors of the Aristotelian and Theophrastean libraries, having no longer anything to fear from royal requisitions, brought out the MSS. from their hiding place, and sold them for a large sum to Apellicon of Teos, a wealthy man, resident at Athens, and attached to the Peripatetic sect. The precious rolls were now transferred, about the year 100 B.C., to Athens, after having been lost to the world for 187 years. They were found to be in very bad condition, and Apellicon caused copies of

---

3 Strabo, xiii, i, 418. 4 Plutarch, Vit. Sullæ, c. 26.
them to be taken, himself filling up on conjecture the gaps which now existed in the worm-eaten text. His conjectures, however, were infelicitous, as he was more of a bibliophilist than a philosopher. Soon after his death, Athens was taken by Sylla (86 B.C.), and the library of Apellicon was seized by him and brought to Rome. It was there preserved under the custody of a librarian, and various literary Greeks resident at Rome gained access to it. Tyrannion, the learned friend of Cicero, got permission to arrange the MSS.; and Andronicus of Rhodes, applying himself with earnestness to the task of obtaining a correct text and furnishing a complete edition of the philosophical works of Aristotle, arranged the different treatises and scattered fragments under their proper heads, and getting numerous transcripts made, gave publicity to a generally-received text of Aristotle.

The above story comes mainly from Strabo, who gives it in his geographical book as a local fact in connection with the town of Scæpsis; he however mentions only Tyrannion as having taken the MSS. in hand. Plutarch repeats the tale in his life of Sylla, and adds the important fact of the recension made by Andronicus. Porphyry, in his life of Plotinus, carries this information still further by stating that Andronicus had ‘divided’ the works of Aristotle and Theophrastus into systems (πραγματείας), bringing together under common heads the speculations that properly belonged to the respective subjects.

These various statements seem in their origin to start from the very fountain-head of contemporary authority. For

---

5 Ό έτι τὰ Ἀριστοτέλους καὶ Θεοφραστοῦ εἰς πραγματείας διείλε τὰς οἰκειας ἐπομενεις εἰς πάνταν συμφωνεῖν. Porphyry says that he himself copied this procedure, in editing the works of Plotinus, and that he thus with regard to them substituted a logical for a chronological arrangement of the writings.
Strabo was a pupil of the learned Tyrannion, in Rome, about the year 70 B.C., or a little later. There must then, beyond all doubt, be an element of historical truth in the account which he gives of the library of Apellicon, and which he must originally have got from Tyrannion himself. But still the exact accuracy of all which Strabo says on this subject cannot be depended on. In the first place, even Tyrannion only knew the relations of Apellicon to the MSS. which he had bought in Scæpsis, or the amount of alteration introduced by Apellicon into them, by a hearsay tradition going back for a period of at least 30 years. Secondly, Strabo probably wrote his account of all these matters many years later, without any notes of what he had heard in his youth, and his memory may in some points have played him false. Thirdly, it seems a striking instance either of this kind of forgetfulness, or else of a want of thorough knowledge as to what had been done for the Aristotelian text, that Strabo should have omitted all mention of the recension of Andronicus, of which such striking affirmation was afterwards made.

Tyrannion was the friend of Cicero, and it is remarkable that Cicero should never in his works have referred to so curious a literary anecdote as that of the finding of the Aristotelian MSS., and their ultimately being brought to Rome. But Cicero evidently knew very little of Aristotle. He had in the library of his Tusculan Villa* some of the works of Aristotle as we at present possess them, probably copies of the recension of Andronicus, but he had not really studied them. When his friend Trebatius asks him what the *Topics* of Aristotle were about, he advises him ‘for his own interest’ to study the book for himself, or else consult

---

* Cicero, *Topics* 1. i. *De Finibus*, v. v. (written 45 and 44 B.C.)
a certain learned rhetorician. Trebatius, however, is repelled by the obscurity of the writing, and the rhetorician, when consulted, confesses his total ignorance of Aristotle. Cicero thinks this no wonder, since even the philosophers know hardly anything about him, though they 'ought to have been attracted by the incredible flow and sweetness of the diction.' He then proceeds to give Trebatius a summary of a few pages out of the Topica of Aristotle, which he had apparently read up for the occasion. Cicero's remark about the 'sweetness' of Aristotle's diction entirely refers to the rhetorical Dialogues which existed in considerable numbers under the name of Aristotle, and which Cicero often quotes. Whether all or any of these were genuine, may be a question; but at all events they bore no relation whatever to the real philosophy of Aristotle. Cicero referred to by name, and probably possessed, the Nicomachean Ethics;—he doubted whether they were by the father or the son; but he misquotes them, and has only superficially studied them, for he praises them as making happiness independent of good fortune. When a man, accomplished in Greek literature, and to a certain extent in philosophy, as Cicero was, could write in this way, it becomes evident that the Aristotelian writings, on being brought to light, had to win their own way afresh in an unappreciative world.

The testimony which Plutarch gives as to the earnestness with which Andronicus had laboured in obtaining a correct text of Aristotle, dates at about the end of the first century of our era, perhaps 150 years after the recension was actually made. Then Porphyry, nearly 200 years later than Plutarch, records the method which Andronicus had adopted in his editorial work, and professes to imitate that method. Böe-thius, born 470 A.D., speaks of Andronicus as 'exactum diligentemque Aristotelis librorum et judicem et repertorem.'
But none of the great Greek commentators or scholiasts betray any knowledge of the story about the library of Apellicon, or of the recension of Andronicus. This, then, is the sum of the external evidence which we possess for the hypothesis that about 50 years B.C. Andronicus produced the first edition of the collective works of Aristotle. Nothing, however, contradicts this hypothesis, and all internal evidence leads to the belief that 'our Aristotle,' as Grote\(^7\) expressed it, is the Aristotle of the recension of Andronicus.

'Our Aristotle' stands in contrast with 'the Aristotle of the Catalogue'—namely, the catalogue of the Aristotelian writings given by Diogenes Laertius in his *Lives of the Philosophers* (v. i. 12). Of the age of Diogenes Laertius nothing certain is known; he was at least as late as the end of the second century A.D., and may have been considerably later. But internal examination of his work shows him to have been a mere thoughtless compiler from the works of others, without criticism or sufficient knowledge for his task. His 'Life of Aristotle' consists of a farrago of gossiping statements; of some dates from the Chronology of Apollodorus (which are really valuable); of fragments of verse attributed to Aristotle; of a chapter of *Aristoteliana* or pithy sayings of the philosopher, which have nothing Aristotelian about them; of the celebrated Catalogue; and of an attempt at a sketch of the philosophy of Aristotle—full of the most ludicrous misrepresentations. Diogenes says that Aristotle composed an extraordinary number of books, the titles of which he has determined to transcribe, on account of their author's excellence in every subject. He then gives his catalogue, enumerating 146 distinct titles of works, divided into about 400 'books' or sections. The 'Aristotle' with which we are acquainted

\(^7\) *Aristotle*, by George Grote, &c., 1872, vol. i. p. 45.
consists of about 40 works, and these are not only fewer in number than, but also apparently different in kind from, the works specified in the catalogue. We only know Aristotle as the author of systematic treatises (πραγματεία) on the great branches of philosophy—logic, physics, metaphysics, politics, ethics, natural history, &c. These are massed together in continuous systems, just as we are told by Porphyry they came forth from the editorial hand of Andronicus. But the ‘Aristotle of the Catalogue’ appears as the author of a great number of smaller works discussing special questions, rather than as the composer of great philosophical systems. Again, a large number of the works in the catalogue are evidently quite different in form from the writings which we are accustomed to attribute to Aristotle. For instance, such names as ‘Nerinthus;’ ‘Gryllus, or on Rhetoric;’ ‘Sophist;’ ‘Menexenus;’ ‘Symposium;’ ‘The Lover;’ ‘Alexander, or on Colonies,’ &c., remind us at once of the dialogues of Plato, and we see that here are enumerated some of those half-rhetorical writings, which—whether they were forgeries, or were really the crude philosophic essays of Aristotle written in popular and dialogic form—were certainly read and admired under the name of Aristotle by some not very discriminating generations of antiquity.

When we ask, what is the origin and authority of the catalogue of Diogenes? it seems not unwarrantable to believe, with Grote, that this catalogue contains the titles of the books existing under the name of Aristotle in the Alexandrian Library during the third century B.C.; that it was originally made by Callimachus, the chief librarian at Alexandria, or by his pupil Hermippus, between the years 240–210 B.C.; that it found its way into some biography of Aristotle, and was thence mechanically copied by Diogenes, in ignorance or disregard of the edition of Andronicus. If
THE PERIPATETIC SCHOOL.

this hypothesis be sound, the catalogue becomes very interesting as indicating the sort of works which passed current as the writings of Aristotle just a century after his death.

Applicable to this very period is the story of Strabo, who relates, as we have seen, that 35 years after the death of Aristotle all his works, except a few of the more popular treatises (ὁλως—τὰ βιβλία πλὴν ὀλιγον καὶ μάλιστα τῶν ἐξωτερικῶν), were lost to the world, being buried in a cellar in Asia Minor, until they were brought back to Athens about 100 B.C.

What then were all these rolls with 146 separate titles, in the Alexandrian Library, if all the works of Aristotle, except a few, written in more popular style, were at the time shut up out of sight? Only conjecture can answer this question, and towards forming, or judging of, any conjecture on the point, some consideration of the character and fortunes of the Peripatetic School after the death of Aristotle will be in the first place necessary. Strabo adds to his narrative a statement, which must be considered as an inference from it, drawn either by himself or by his informant. 'Hence,' he says, 'it came about that the earlier Peripatetics, being deprived of all the really philosophic works of Aristotle, were reduced to rhetorical essay-making; and the later ones, when the books came again to light, were generally compelled to resort to a conjectural interpretation of them, owing to their corrupt condition.' Plutarch, in repeating the story, gives this corollary in an emphasised form, saying expressly that it was from no want of personal zeal or ability, but from the want of the original writings, that the Peripatetic School had previously declined.

In these statements, however, cause and effect appear to
be transposed. It was rather the apathy of the Peripatetics which caused the great works of Aristotle to be forgotten, than that the loss of those works caused the paralysis of the school. It must be remembered that for 35 years after the death of Aristotle all his works are acknowledged to have been accessible to his pupils, many of whom, such as Theophrastus, Eudemus, Phanias, and Straton, were engaged partly in editing some of them (as for instance the *Metaphysics*), partly in making these works the basis for fresh treatises of their own. In this considerable period, added to the 13 years of Aristotle's own oral teaching, surely, if there had been any vitality in the school, it would have so grasped the leading and organic ideas of the Aristotelian system as to render it impossible that they should fall into oblivion. The school had, at all events nominally, a continuous life, Andronicus himself reckoning as the eleventh scholarch from Aristotle, and it ought to have had a continuous tradition. Can we fancy them, even after the loss of their school-library, forgetting the syllogism, and the categories, and the principles of logical division, and the four causes, and the distinction of the potential from the actual—and relapsing into mere smooth moral platitudes, so as to be contrasted, as they were by Cicero, with the logical severity of the Stoics—unless they had dwindled down and degenerated through the utter want of personal ability among themselves, so as really to have no pretence to be Aristotelians except in name?

Had the earlier Peripatetics sufficiently cared for and cherished the great works of Aristotle, they would doubtless have multiplied and retained copies of these among themselves. But the Peripatetics showed from the very outset a tendency to abandon what was deepest, most systematic, and most philosophical in the thought of Aristotle, and to go off
in various directions of more popular and easy modes of thinking. Thus they followed out Aristotle's inductive impulse into many fields of enquiry, without much reference to a central philosophical point of view. They collected 'problems' with their answers, such as could be given; and they contributed monographs on special questions. The *Charactères* of Theophrastus himself, Aristotle's first successor, are an instance of observation without philosophy. Some of the school were content with producing compendia of Aristotle's treatises. Others resorted to the rhetorical sermonizing attributed generally to the sect by Cicero and by Strabo. There seems every reason to believe that after the death of Theophrastus the Peripatetic School had comparatively poor and unworthy adherents, while in the meantime all the philosophic ability round the Ægean Sea was throwing itself into following the fresh impulse of either the Stoic or the Epicurean tenets. The later Peripatetics cannot be justified by the theory of Strabo any more than the earlier ones. In the first place, the greater works of Aristotle, as we know them, do not exhibit any decided traces of those *lacunae* caused by worms and damp which Strabo attributed to the MSS. rescued by Apellicon. In the second place, if the Peripatetics at Athens were unable to restore, or properly understand, the text when brought to light, how was it that Andronicus some 50 years later was able to bring out a lucid and trustworthy recension? Either he must have had other copies of the Aristotelian writings at his command (which the Peripatetic School might equally have obtained) to collate with the MSS. of Apellicon; or else, he was an able man competent to edit a system of philosophy, the other professed adherents of which had lost all hold of it and all power of understanding it.

The latter seems the more probable hypothesis. In
accordance with the narrative of Strabo (which we may accept as distinguished from the deduction which he endeavoured to draw from it), it may be believed that the purchase made by Apellicon in Asia Minor was indeed the means of bringing back to the world unique copies of, at all events, several of the great works of Aristotle. The catalogue of Diogenes seems to bear out this view; it indicates the tendencies followed by the Peripatetic School after the death of their master. We need not go so far as to say, with Valentine Rose, that all the works enumerated in this catalogue and all the so-called ‘lost works’ of Aristotle were forgeries. Many of them were probably monographs executed during his lifetime by his disciples; others may even have been earlier and more popular philosophical essays by himself; still more probable is it that a large proportion were small works, either epitomizing separate parts of his system, or stating separate ideas belonging to his system in rhetorical and sometimes in dialogic form, which were composed after his death, and which in good faith, or at all events in unconsciousness of fraud, were inscribed with the name of Aristotle by his well-meaning followers. It seems to be indicated by the catalogue that such as these were the kind of writings which the Peripatetic School, before Aristotle had been dead for 40 years, had come almost exclusively to care for. Thus copies of them were multiplied and became available for the Alexandrian Library; and as they were a class of literature comparatively easy of imitation, a considerable crop of pure forgeries may very likely have grown up and have gone to swell their number. Hence Aristotle’s reputation with the ancients as a most voluminous writer,—the author of 400 books! And if these suppositions be well-grounded, we see how nearly, in the case of Aristotle, the favourite dictum of
Lord Bacon came to pass:—That 'Time, like a river, bringing down to us things which are lighter and more inflated, lets what is more weighty and solid sink.' If it be true, as it well may have been, that Apellicon's library contained unique copies of all that we know as the works of Aristotle, it is clear that the merest chapter of accidents led to their coming under the appreciative and competent hands of Tyrannion and Andronicus, and thus being brought back to the cognisance of the world. Almost any change in the actual circumstances might have consigned them to perpetual oblivion. In which case much of the history of the middle ages and of modern civilisation would have been altered, and many of the modes in which we habitually think and speak would have been different from what they are.

But the tables have been completely turned; Lord Bacon's aphorism has, in this case, been directly belied. For, if there ever was anything 'lighter or more inflated' among the genuine productions of Aristotle, it has all sunk out of sight, while what was 'more weighty and solid' among his works has alone come down the stream of Time. Not a single one of the dialogues and exoteric works mentioned in the catalogue and often quoted by the ancients, now remains. The specimens of these writings which exist in quotation seem to show that in losing them we have lost what was of comparatively little worth. One question of interest is, what were the causes that produced their complete extinction? And, in answer to this, it seems a highly probable conjecture to attribute that result in the first place to the entire exclusion of the whole class of exoteric writings by Andronicus from his edition of the works of Aristotle. If our edition of Aristotle corresponds with that made by Andronicus, it is clear that these writings were excluded, and it is a remarkable fact that this should have been the
case. Plenty of the so-called 'Dialogues of Aristotle' existed in the time of Andronicus and long after him. Cicero, the friend of Tyranion, speaks of them with enthusiasm and quotes them. And yet Andronicus, when endeavouring to form a complete edition of the works of Aristotle, appears sternly to have excluded them all. If it was the fact that he did so, his motive for doing so must have been one of two things: either his critical judgment led him to set down these writings as forgeries, or else, his philosophic taste condemned such merely rhetorical productions, even if by Aristotle himself, as unsuitable to form part of an edition which was to comprise only systematic treatises. However this may have been, it seems credible that the edition of Andronicus had a great deal to do with the preservation of all the works that were included in it, and with the loss of all those that were not so included. Perhaps copies of the entire recension of Andronicus, stamped with his authority, were placed not only in the libraries of the Peripatetic schools, but also in great public libraries and in the private collections of rich men. A cohesive permanence would thus be given to this edition as a whole, it would come to be identified with Aristotle, while the outlying and scattered copies of the dialogues and other smaller works inscribed with his name, would be left exposed to diverse and uncertain fate, without sufficient prestige and guarantee to keep them in existence.

Even if the hypothesis be admitted as probable that unique copies of the great treatises of Aristotle, found in the library of Apellicon, formed the basis of the edition of Andronicus, still it does not follow that Andronicus was confined to the use of the MSS. which had belonged to Theophrastus and which had been for so long shut up at Scepsis. To admit this might lead to the inference that
nothing appears in our edition of Aristotle, which was not written within 35 years at most after the date of Aristotle's death. Internal considerations are, however, too much opposed to such a view. And it must be remembered that among the contents of the library of Apellicon the 'book-collector' there were not only the Theophrastean MSS., but also, doubtless, a mass of other Peripatetic and miscellaneous writings, got together from various sources. Such of these as were rhetorical, or not in strictly expository form, Andronicus seems to have rejected. But there is reason to believe that he admitted and incorporated with the genuine works others which, though composed long after the death of Aristotle, were yet written in close approximation to his philosophical style and manner. We have, of course, no means of knowing whether Andronicus, by including in his edition such works as that On the Universe and the Great Ethics, meant to stamp them, under the guarantee of his own critical authority, as genuine writings of Aristotle,—or whether he admitted these and many other books and portions of books merely as containing Aristotelian thought and as suitable complements of a system which in its exposition had been left incomplete. If we take up the former supposition, we have then to make allowance for a considerable element of conjectural criticism in the procedure of Andronicus, and we must admit that his authority on such questions is not decisive. But the latter seems the most credible of the two alternatives. We know from Porphyry that Andronicus dealt somewhat freely with the Aristotelian writings, re-arranging them and bringing together under their proper heads discussions which before existed separately. In several of the important treatises probably no such treatment as this was required. But still we must be prepared to find traces of the editorial hand almost everywhere. For instance, it is a question how far
the references from one part of the works to another which appear ever and anon, are to be attributed to the editorship of Andronicus, and to his desire to give solidarity to the system as a whole. And at all events, such works as the Problems seem to exhibit decisively signs of having been put together editorially out of partly Aristotelian and partly un-Aristotelian materials. In short, it appears most probable that Andronicus in his edition aimed at giving the system of Aristotle set forth in a clear recension of the genuine systematic writings of Aristotle himself, slightly re-arranged and perhaps interpolated with references, but also complemented with some of the more valuable remains of the earlier Peripatetic School.

From these more general considerations we now turn to the ethical treatises which are found placed among the 'Works of Aristotle.' These are 4 in number: the Nicomachean Ethics, the Eudemian Ethics, the Great Ethics, and the treatise On Virtues and Vices. It may perhaps be most convenient to state at once the literary conclusions which have been arrived at with regard to these several works, and afterwards to show the grounds for them. The conclusions then are, first, that the Nicomachean Ethics are, as a whole, the genuine and original work of Aristotle himself, though some special parts of them are open to doubt. Second, that the Eudemian Ethics are the work of Eudemus, the pupil of Aristotle, written either during his master's lifetime or shortly after his death; that they are based entirely on the Nicomachean Ethics, being a re-writing of the system contained in the former treatise with some modifications and additions. Third, that the Great Ethics are the compilation of some considerably later Peripatetic, who had before him the Ethics both of Aristotle and of Eudemus, and who gives a sort of abstract of the results of both, but
on the whole follows Eudemus more closely than Aristotle. Fourth, that the little tract *On Virtues and Vices* is a specimen of those lighter Peripatetic productions, which probably formed the great bulk of that collection which went under the name of the 'Writings of Aristotle' in the Alexandrian Library.

The first point to be established is one on which general external consent entirely coincides with internal probability — namely, that the *Nicomachean* treatise is to be preferred above the *Eudemian*, as well as above that called the *Great Ethics*. Neither by the Greek scholiasts, nor by Thomas Aquinas, nor by any of the succeeding host of Latin commentators has either of the two latter treatises been deemed worthy of illustration, while the *Nicomachean Ethics* have been incessantly commented on. This tacit distinction between the three works was the only one drawn till the days of Schleiermacher, who mooted the question of their relation to each other. He at once pronounced that they could not all belong to Aristotle, but by the irregularities which were plain enough in the *Nicomacheans* and *Eudemians* he was unfortunately led to consider the *Great Ethics* to have been the original work and the source of the other two. This conclusion, however, was set aside by the deeper criticism of Spengel, who, by arguments drawn from internal comparison of the three treatises, vindicated for the *Nicomachean Ethics* the place of honour, as having been the direct production of Aristotle, while the other two works he showed to be respectively a copy, and a copy of a copy, of the *Ethics* of Aristotle. The question is not one of a mere difference of style; indeed, the Peripatetic School had been

---

so thoroughly imbued with the peculiar mannerisms of their master that it would be hazardous to pronounce upon grounds of style alone whether any particular paragraph or section of all that appears in our edition of Aristotle came from his pen or not. But in comparing the three Ethical treatises with each other, we consider the organic structure of each work as a whole; we see the radical difference between them in structure and aims, and then there comes to light a number of minor characteristics attaching to each, and reasonably to be connected with what we are led to conceive must have been the original character of each, of the three works in question.

The *Nicomachean Ethics* naturally take their place beside the great philosophical treatises of Aristotle. This work at its outset shows the true Aristotelian *note* in the shape of a proem. The Peripatetic writers in composing their monographs, or their compilations from Aristotle with a foregone conclusion, were accustomed to plunge at once *in medias res*, without preface, and without any general statement of what it was which they were about to discuss, and without any gradual leading up to their subject. But with Aristotle it was different; we see in him a tendency, more or less carried out in all his undoubted writings, to commence each exposition of a fresh branch of philosophy with the announcement of some pregnant universal principle, appropriate to the speculations which are to follow, and containing the germ of many of them within itself. See, for instance, the first sentence of the *Metaphysics*, 'All men instinctively desire knowledge;' or of the *Later Analytics*, 'All teaching and learning by way of inference proceed from pre-existent knowledge.' The same manner appears in the pregnant opening of the *Nicomachean Ethics*: 'Every art and science, each action and purpose, seems to have some
good as its object.' This universal proposition is the first step in an elaborate argument which resolves everything practical into means or ends and identifies the Chief Good, or Happiness, with the end, or final cause, of life. This all-important conception of the final cause of life is then proposed for consideration, and the question arises—What science is to treat of it? The answer is given tentatively that it must be treated of by 'a sort of Politics' since the end for the individual and for the state are identical. This answer belongs to the Platonic point of view, and shows that ethics had as yet not acquired an independent position as separate from politics. The qualification however here introduced by the words 'a sort of politics' shows Aristotle in the act of working his way towards the conception of a separate science of ethics. Having posited his main question and the science which is to treat of it, he now proceeds to discuss to some extent the method to be employed, the amount of exactness to be expected, the kind of evidence to be adduced—in short, the logic of quasi-political, or ethical, science. And in so doing he follows the course elsewhere practised by him, in commencing his treatises by remarks on the logic of the different sciences; as, for instance, see especially the introduction to his work On the Parts of Animals. All then in the commencement of the Nicomachean Ethics is systematic, original, and thoroughly Aristotelian in character. By regular and methodical development the ground plan of the whole of the rest of the treatise is prepared in Book I. How that plan was actually filled up we shall come back to consider more particularly hereafter. In the meantime we turn from the great Aristotelian prelude of the Nicomachean Ethics to examine in comparison with it the characteristics of the other two Peripatetic systems of ethical philosophy.
The Eudemian Ethics commence, without any scientific preface, but rather in the form of a literary essay, with the sentence: 'In the temple of the God at Delos, some one, to show his own opinion respecting the good, the beautiful, and the sweet,—that these are not predicates of the same subject,—has inscribed the following verses on the vestibule of the shrine of Latona:

'Beautiful 'tis to be just; and best of all things to be healthy;
'Yes, but the sweetest for man is to obtain his desires.

'But we cannot agree with this person; for Happiness is not only the most beautiful and the best, but also the sweetest of all things.' The Eudemian writer then goes on to say, 'Some questions are practical, others are merely speculative.' The latter must be reserved for their own proper occasion. This is the essential principle of our method. The great question for us at present is, In what Good Living consists, and how it is to be obtained, whether by nature, learning, or chance?' Very evidently in this exordium there is the beginning, not of any original philosophical investigation, but of the exposition of foregone conclusions derived from the Ethics of Aristotle. The idea of Happiness, as the chief good for man, and as the leading topic for ethical enquiry, its identification with Good Living, and the predicates to be attached to it,—are here simply taken over, as established results, from Aristotle who had worked them all out separately by argument. We recognise the quotation which is here put so pompously in the fore-front, as having occurred in Eth. Nic. I. viii. 14. There, however, 'the Delian inscription' is only mentioned in passing as one of the common sayings with which Aristotle compares his definition of the chief good. But here the writer, using the couplet with more circumstance, seems pleased to be able to add particulars
about the place where it was inscribed. This kind of amplification is very characteristic of the *Eudemian Ethics*, which often play a useful part in furnishing learned references and more explicit quotations for the *Nicomacheans*. For instance, they give in amplified form the saying of Anaxagoras on Happiness, and of Heraclitus on Anger; and a corrected statement of the doctrine of Socrates on Courage. What was of little moment to Aristotle, carelessly introducing a quotation to illustrate some argument, became of importance to a writer who was reproducing in slightly altered arrangement the contents of an Aristotelian treatise.

For this is in effect the nature of the *Eudemian Ethics*; they are essentially a re-writing of the *Nicomachean* work, so that—

Books I. and II. correspond with *Eth. Nic.* i.—iii. v.

Book III. corresponds with *Eth. Nic.* iii. vi.—iv.

Books IV. V. VI. are word for word identical with *Eth. Nic.* v. vi. vii. (a circumstance to be considered hereafter).

Book VIII. is a mere fragment, of which both the beginning and the end are apparently lost. It contains entirely new matter, namely some difficult questions (*ἀπορλαί*) on the possibility of misusing virtue, and as to the nature of good fortune; and a discussion upon the highest state of human excellence, which is here styled *καλοκαγαθία*, or the union of internal and external well-being.

---

Books I.—VII. of the Eudemian treatise generally coinciding with Books I.—IX. of the Nicomachean (or as we may say, the Aristotelian) treatise, and only the last fragmentary Eudemian book showing a decided divergence from its prototype,—it remains to be seen (leaving aside for the moment the three books common to both) what internal variations and differences between the two treatises can be pointed out. In the first place, then, the point of view is different; the Eudemian writer is not so much an investigator and discoverer, proceeding analytically, as an expositor, synthetically stating conclusions previously arrived at. His subject is Happiness, and he discusses this by means of materials collected from Aristotle’s Ethics, but in so doing he deserts the Aristotelian, or scientific point of view; he does not regard ‘Happiness’ as a mere word to be explained by arriving at a conception of the τελειότατον τέλος or ultimate final cause of human life,—by which alone life can be explained, just as every other existence must be explained by its final cause. Nor does he remain true to the Aristotelian conception of ἐνεργεία, by which Happiness or the chief good is to be explained as the development into actuality of what is potential in man. He indeed uses these formulae (Eth. Eud. i. viii. 17—19. ii. i. 2—9.), borrowing them from Aristotle, but the conceptions do not influence his work throughout, as they do that of Aristotle. Hence he is not led, like Aristotle, to identify theoretic thought with the highest good for man.

In the second place, the Eudemian writer having separated his subject from the metaphysical and logical grounds on which it had been based by Aristotle, separates it also from that wider view under which it had been placed, as belonging to politics, or the science which treats of man not as isolated, but as by nature the member of a community. Thus, in
borrowing from Aristotle the saying that the chief good 'falls under politics' he modifies this (Eth. Eud. 1. viii. 17.) by adding 'and economics and practical thought,' calling these 'states of mind,' and thus showing that he had a quite different conception from that entertained by Aristotle—of politics as the master-science for things practical. In fact, with this writer πολιτικὴ appears rather as the art of government, than as a science in the proper sense of the term. With all the borrowed plumes of philosophy which he so often displays, this writer evidently treats of Happiness not in a strictly philosophical or scientific, but in an empirical, spirit. He represents in fact the first step of that course of decadence which led the Peripatetic School ultimately, as Strabo says, to mere moral essay-making devoid of all philosophy. This writer has indeed taken merely the first step, he is himself far from being devoid of philosophy, only he is not able to keep up to the level of Aristotel. He is a very keen and penetrating man, and the author, as we shall see, of many curious investigations, so that he carries many matters in ethical enquiry farther than they had been carried by Aristotle; yet still he represents the commencement of decline. The next thing to be remarked about him, which is all in accordance with the preceding, is, that while less philosophical, he is more moral and more religious in tone than Aristotle. An instance of the manifestation of that tone may be found Eth. Eud. 1. v. 10, where in discussing (after Aristotle) the different lives that men lead, he says 'the political man, truly so called, aims at noble actions for their own sake.' This moral connotation given to the term πολιτικὸς does not seem to be based on anything Aristotelian. But the most striking feature of the Eudemian system occurs in Eth. Eud. 11. v. 1. as compared with the
conclusion of the fragmentary Book VIII. The writer appears dissatisfied with the vagueness of Aristotle's formula for the mean 'according to the right law and as the thoughtful man would define.' He says, 'this is not explicit enough,' 'we require something definite (δρον) to which to look.' And he announces this in the last sentences which have been preserved of his work, 'Whatever choice and possession of the natural goods, whether bodily goods, or riches, or friends, or whatever else, best promotes the contemplation of God, this is best; and by no nobler standard can goods be judged. But if any choice or possession, either through deficiency or excess, hinders us from serving and contemplating God, it is bad. The same rule holds for the soul, and this is the best standard for the soul, that she should as little as possible be cognisant of her animal half, in its animality. So far then for the standard of perfection, and the object of this world's goods.' This elevated passage, which brings religion into contact with human life, and identifies it with morality, enters upon a subject not discussed by Aristotle.

The words 'serving God' (θερμαντέων τον θεόν) imply a different conception of the Deity from what we are accustomed to find in Aristotle, and the connection here made between moral virtue and theological contemplation is opposed to the broad distinction set up by Aristotle between speculation and practical life, and is more like Platonism. The writer elsewhere entertains the conception of the personality of God more unreservedly than Aristotle. See Eth. Eud. vii. x. 23, where it is said that 'God is content if he receives sacrifices according to our means.'

It may have been one object in re-writing the Ethics of Aristotle—to bring them rather more into harmony with popular religious views; but another object certainly was that the writer might graft on to them additions and im-
provements of his own. In several points these additions are very evident and we see a distinct advance beyond the theory of Aristotle. The most conspicuous instance of this kind is to be found in all that relates to the moral will, which is evidently a favourite subject with the Eudemian writer, and the questions relating to which he had worked out further than the point arrived at in at all events the earlier books of the Nicomachean Ethics. This writer's forte is psychological observation, which is quite in accordance with the known tendencies of the Peripatetic School. The study of the phenomena of incontinence, or the wavering of the will, has great attractions for him. Even leaving in abeyance the question of the authorship of what stands as Eth. Nic. Book VII., we find the subject of incontinence constantly brought in throughout the Eudemian Ethics in connection with other matters, from which it is kept separate by Aristotle. In Eth. Eud. ii. xi. 1-6 we find characteristic remarks on the distinction to be made between virtue and continence, and, on the province of the former to give or preserve a conception of the end to be aimed at in action, of the latter, to give or preserve a conception of the means towards that end. In iii. i. there is an excellent re-statement of the doctrine of Courage, with some interesting after thoughts, e.g. 'If the brave man does not feel the danger there is nothing very grand in his enduring it.' III. ii. improves the discussion on Temperance (1) by indicating two separate meanings of the word ἀκόλαστος, 'uncorrected' and 'incorrigible;' (2) by connecting the subject with the discussion which appears in Eth. Nic. vi., and thus not leaving the ἀκόλαστος of the table of the virtues quite cut off from the ἀκόλαστος of the moral will; (3) by the remark that among the pleasures not leading to intemperance may be reckoned Platonic love
(τὴν διὰ τῆς ὧψως ἡδονῆς τῶν καλῶν ἀνευ ἐπιθυμίας ἁφροδισίων). III. v. describes Great-souledness (μεγαλοψύχα) as a correct judgment about the great and small in all matters, whether of danger, or expense, or what not, so that it implies all the virtues. This is to the effect that independence of character includes all kinds of goodness—a view similar to that contained in Emerson’s essay on Self-reliance. Besides Great-souledness and its two extremes a fourth character is here added,—that of the plain man, who, not having much merit, neither underrates nor overrates the merit which he has. VII. v. 5 introduces a refinement on Aristotle’s doctrine of Friendship. Here it is said that in friendship the opposite qualities to one’s own are sometimes loved for the sake of the mean. In which case men love the opposite per accidens, the mean essentially. Book VIII. gives some interesting remarks on Good-luck, which it divides into two kinds: In the one case the man is unconsciously inspired by God, and thus acts on a right intuition; in the other case he blunders into success and succeeds against reason. Finally, however, chance is eliminated, and all choice of the right in us is attributed to God. How, it is asked, can we begin to think or resolve? thought or resolution cannot furnish the beginning to itself,—this must come from God. The whole of this last book is very religious. We have seen above how the writer describes his culminating quality of καλοκαγαθία, or human perfection, as the sum of internal and external well-being, all tending to the service and contemplation of God.

These are some specimens of the sort of variations from and additions to the Ethics of Aristotle, which were introduced by the Eudemian writer. With regard to his style and manner, we notice in the first place a very close approximation to the writing of Aristotle. And this is easily
THE EUDEMIAN ETHICS.

explainable; a strongly mannered style like that of Aristotle, in which there was no attempt at elegance of form, and which was full of his own peculiar terminology, was certain to take hold of the minds of his school, and was much more likely to be exactly reproduced by them than a style of lucid beauty, like that of Plato, would have been. For the sake of illustration, if we imagine a set of thinkers and writers to have been trained to think and express themselves after the manner of Mr. Carlyle, it is very easy to believe that the writings of such a school would only have been distinguishable from those of their master by a difference in the intrinsic force and value of the thoughts expressed by them. And so it was with the Peripatetic School. The Eudemian writer is more distinguishable from Aristotle by the contents and character of his thoughts, than by his mode of expressing them. He shows indeed a proclivity to indulge in abundance of literary quotations, and he quotes more fully and explicitly than Aristotle; and he is remarkable, throughout his work, for the constant introduction of logical formulæ. The term ἐπος to denote definition, differentia, or standard of reference is a peculiar favourite with him. The terms δὴ λοι ν ἐνά τῆς ἐπαγωγῆς to denote an appeal to observation, and the phrase ἀλήθεια μὲν οὖθεν δὲ σαφὲς ('this may be true, but it is not explicit') are of frequent recurrence. But these are small marks. The writing is certainly less clear than that of Aristotle; in many places the compression is excessive and goes beyond the compression of Aristotle. And looking at each book, or section of the subject, as a whole, we miss anything like clear plan and lucid arrangement. Aristotle was remarkable for the separate treatment he gave to each particular topic, working out each head, such as Virtue, the Voluntary, Friendship, Pleasure, and Happiness,
by itself, almost without reference to the rest. But his follower very naturally brings together results that Aristotle had left separate. This would have been a considerable merit had the writer possessed the power of creating a clear impression. But this he had not, and therefore we cannot wonder that this second-hand and touched-up system of Aristotelian ethics should never have shown any tendency to supersede the original work.

We have hitherto seen the sort of grounds which there are for believing that the *Eudemian Ethics* were at all events not written by Aristotle himself, who, indeed, with all that he had upon his hands, was very unlikely to have rewritten his own treatise in this way. We shall now see that there is a certain amount of external authority, as well as of general probability, in favour of the hypothesis that this work was, as its name would imply, actually written by Eudemus of Rhodes, the chief disciple of Aristotle after Theophrastus. Of the particulars of the life of Eudemus little is known, but Simplicius has preserved an important notice of him in the shape of a passage from the work of Andronicus Rhodius (the great editor) on Aristotle and his writings, which contains a fragment of a letter from Theophrastus to Eudemus, in answer to a request for an accurate copy of a MS. of the 5th Book of Aristotle's *Physics*. This MS. was probably required by Eudemus in course of writing his own book on the same subject. Aselepius records that Aristotle himself had committed his *Metaphysics* in an incomplete state to Eudemus, who was dissatisfied with the form of the work, by which its publication was delayed, and it was ultimately completed out of the other works of Aristotle by his sur-

11 Ib. p. 519, b. 39.
vivors. Ammonius\(^{12}\) says that 'the disciples of Aristotle, Eudemus and Phanias and Theophrastus, in rivalry with their master, wrote Categories, and On Interpretation, and Analytics.' Simplicius\(^{13}\) on the Physics says that 'Eudemus, almost paraphrasing the words of Aristotle, lays it down, &c.' Of the writings of Eudemus the following are mentioned by ancient Greek authorities: On the Angle, A History of Geometry, A History of Arithmetic, A History of Astrology, Analytics, On Diction, On Physics, and perhaps a work On Natural History.\(^{14}\) We have abundant traces, then, of Eudemus working both as an editor of Aristotle and as a quasi-original author, partly paraphrasing Aristotle, and partly writing in contravention of Aristotle’s views. As to the authorship of the Eudemian Ethics the testimony of the ancients is divided. Some authorities, perhaps misled by this work having been placed by Andronicus in his edition of Aristotle, speak of it simply as 'Aristotle’s.' Thus Atticus Platonicus\(^{15}\) (who lived in the 2nd century), adversus Aristot. apud Eusebium Propar. Evang. xv. 4, says, 'The treatises of Aristotle on these subjects—the Eudemians and Nicomacheans, and those entitled the Great Ethics—all contain a petty, a mean, and a vulgar conception of virtue.' Porphry, in his Prolegomena, enumerates the ethical writings of Aristotle as 'those addressed to Eudemus his disciple, those addressed to Nicomachus his father (the Great Nicomacheans), and those addressed to Nicomachus his son (the Little Nicomacheans).’ This view, that 'Ἡθικὰ Εὐδημίου

\(^{12}\) Brandis, Scholia in Aristot., p. 28, note.
\(^{13}\) Ib. p. 431, a. On the other hand, Simplicius, on the Posterior Analytics, often quotes Eudemus as differing from Aristotle.
\(^{14}\) The authorities for these works are given by Fritsche in his edition of Eth. Eud. (Ratisbon, 1851). Prof. p. xv.
\(^{15}\) Simplicius (on the Categories, fol. 43, b.) in just the same way refers to what 'Aristotle says in the Eudemian Ethics.'
or Ἐὐδημον) meant *ethics addressed to Eudemus*, has been sometimes followed in later times; thus Casarius, in his *Bibliotheca Arab. Hist.* i. p. 306, mentions ‘ethicorum questiones minores Eudemo inscriptæ;’ and Samuel Petit thought that this Eudemus was probably not the disciple of Aristotle, but one of the Archons of Athens. Porphyry’s explanation of the name ‘Great Ethics’ as ‘the Ethics addressed to Nicomachus the greater,’ that is, to the father of Aristotle, as opposed to the ethics inscribed to Nicomachus the son, was probably a mere conjecture, based on the assumption that ‘Eudemian’ and ‘Nicomachean’ meant ‘to Eudemus’ and ‘to Nicomachus.’ There is however no good instance to justify this interpretation of such adjectives. And it need hardly be said that there is nothing in the books themselves which at all bears out the idea of their having been so addressed or inscribed. Such dedication was alien from the mode of writing which we find in Aristotle. And he would hardly have inscribed to his son a book upon a subject of which he says (*Eth. Nic.* i. iii. 5) that a young man is not a fit student.

On the other hand, Aspasius (On *Eth. Nic.* fol. 141, a.) speaks of Eudemus as an original writer on ethics. He says, ‘Both Eudemus and Theophrastus tell us that unequal, as well as equal, friendships are contracted for the sake of either pleasure, utility, or virtue.’ The reference, so far as Eudemus is concerned, is, to *Eth. Eud.* vii. x. 9. And a notable Scholium discovered by Brandis in the Vatican (see *infra* note on *Eth. vii.* iii. 2) conjecturally attributes the discussion on Pleasure which follows that on Incontinence to Eudemus, as differing essentially from the doctrine of Aristotle. These are, it must be confessed, meagre testimonies in favour of assigning to Eudemus the *Ethics* which bear his name. But, after all, there is no one else to whom they
can with any probability be assigned. To have any external authority whatever in favour of an hypothesis so strongly supported, as this is, by internal evidence, is a great matter, since it is clear that the world in general, during the first centuries of our era, accepted whatever they found in the edition of Andronicus as being the work of Aristotle.

We will now glance at the treatise entitled Ἡθικὰ Μέγαλα—Magna Moralia, or Great Ethics. The exordium of this work does not give a high expectation of what is to follow; the writer says: 'Since we purpose to speak on ethics (ὑπὲρ ηθικῶν), we must first consider of what the moral character (ἡθος) is a part. In a word, then, it seems to be a part of naught else but politics. For it is not possible to act in political matters without exhibiting some moral quality, as, for instance, goodness. Now goodness consists in possessing the different virtues. And one ought, if one is to act in political matters, to be good in character. Therefore the scientific consideration of human character (ἡ περὶ τὰ ηθὴ πραγματεία) would seem to be a part, and in fact the beginning, of politics.' This passage exhibits what may be called the etymological fallacy, for the writer, taking up the etymology of the word ἡθικά, goes on to misapply it, and to speak as if first the moral character, and secondly the scientific consideration of character, were identical with ethics. Passing this over, we see that the intention is, though feebly executed, to reproduce the Aristotelian idea of the hierarchy of the practical sciences, which Eudemus had endeavoured to modify by giving to ethics a more independent position. But the statement here is both shallow and confused; no real reason is adduced to prove that ethics

---

16 His argument seems also to confound political matters (τὰ πολιτικά) with the science of politics (πολιτική).

VOL. I.
is a subordinate branch of politics; and we do not find any
further carrying out of this idea in subsequent parts of the
work.

This writer frequently employs formulae which would
imply a claim to independence of thinking, such as δοκεῖ ἐ
μοι, &c. At other times he speaks as if representing the
Peripatetic School, as, for instance, i. xxxv. 26, ἀλλὰ βέλτιον
ὡς ἡμεῖς ἀφορίζομεν. But on examination his work presents
uniformly the appearance of a résumé of foregone conclu-
sions drawn from both the Nicomachean and the Eudemian
Ethics. The writer, however, appears to have had not only
these two treatises before him, but also some of the ethical
writings of Theophrastus. At least it seems reasonable to
suppose that there was some such source for the not unfre-
quent novelties which occur ever and anon throughout the
work, and which we shall now specify, together with a few
other points which strike one as characteristic in reading
through the Great Ethics. In i. i. 4–8 we find a jejune
summary of the previous history of moral science; in
i. i. 10, ii. 7–11, an expanded statement of the import of
the word τιγχαθν, which in its arid logical clearness forms a
sort of scholium upon Aristotle. In i. iv. 9–11 a restricted
moral meaning is put upon the term ἐνέργεια, as if implying
self-determination and will (ἐρρη). It is said, that a fire
will burn if supplied with fuel, but has no power of taking
fuel for itself; therefore it has no ἐνέργεια, and the same is
the case with the nutritive part of the soul. From the
same restrictive point of view it is said, i. v. 3, that no one
is praised for being wise or philosophic, in short, that the

17 Referred to by Aspasius, see
above p. 32, and also by Ciceron, De
Familias, v. 5. Why these writings,
if, as seems probable, they survived
to the time of Andronicus, were not
included by him in his edition of the
Aristotelian works, we have no means
of knowing.
intellectual qualities are not virtues (which is in direct opposition to *Eth. Nic.* 1. xiii. 20). I. ix. 8–xi. 5 asserts free will against the doctrine of Socrates, and argues that though you cannot will to be best, you can always will to be better than you otherwise would have been. I. xxi. 12, following Eudemus, lays it down that a man is not courageous unless he *fears* while enduring. I. xxxv. 26 gives a formula slightly different from that found in the two former treatises, ἀλλὰ βέλτιστον ὑσ ἡμεῖς ἀφορίζομεν, τὸ μετὰ λόγου εἶναι τὴν ὀρμὴν πρὸς τὸ καλὸν. This shows that the Peripatetic School had by this time adopted the word ὀρμῆ, denoting 'impulse,' 'inclination,' 'act of the will,' and we find this word in constant and characteristic use throughout the *Great Ethics.* II. iii. 3–20 moots some new difficulties (άπορια) on the nature of Justice and Virtue, namely: Does the just man award his due to every one in *society* (τὴν εὐτείχειαν)? This is rather the part of the flatterer. If the unjust man injures others knowingly, he must *know the good,* and therefore must be thoughtful (φρόνιμος), which he is not. Can we be unjust towards a bad man, in depriving him of rule and authority, since he is not fit to possess them? If we cannot be just and brave at the same time, which should we select? Answer, φρόνησις will tell you, arbitrating between the φυσικά ὀρμαί. Can we have too much virtue? Answer, virtue is μεσότης, we cannot have too much moderation. The account of pleasure in II. vii. is taken from the treatise in Book VII. of *Eth. Nic.* but improved from the treatise in Book X. Some of the arguments on pleasure are verbal, e.g., worms and beetles are φαῦλα (lower creatures); pleasure is a return to one's nature; therefore their pleasure must be a return to φαῦλη φύσις and therefore bad. The argument here turns on the word φαῦλος, used equivocally. To say that pleasure is a
return or restoration (κατάστασις) was Aristotle’s earlier and less scientific view. II. vii. 21 contains a novel illustration: Those who do not know nectar think wine the sweetest of all things; so also those who have only known sensual pleasure. II. vii. 23 says that it is jealousy to wish to keep a thing all to oneself, therefore we must not argue against pleasure on account of its being shared by all. The account of good-luck in II. viii. is taken from Eudemus, but is less theological than his view. The author here distinguishes objective from subjective good-luck; making the first an unexpected turn in external things, the latter a blind ὀρμή within the soul to take the course which will turn out best. Arguing against what Eudemus had said, he excludes the idea of Providential interference from good-luck as being beneath the notice of the Deity. In II. ix. he borrows the summing up of the virtues in καλοκαγαθία from Eudemus, adding the definition that the καλὸς καὶ ἀγαθὸς is he to whom the goods of the world (τὰ ἀπλῶς ἄγαθα) are really goods and whom they do not corrupt. In II. xv. 3–5 he takes (against Eudemus) a positive view of theology, dismissing as beyond solution the question whether God contemplates Himself.

In all this and in the Great Ethics generally we see, with some exceptions, a nearer affinity to the point of view of Eudemus than to that of Aristotle. In detail, that is to say in the order and manner of treating the different subjects, the writer follows the lead of Eudemus, from whom he draws most of his conclusions, appearing to use Aristotle rather as an authority of appeal and a source from which to correct Eudemus. At the beginning of Book I. indeed he seems about to follow Aristotle, but afterwards he changes and adheres closely to Eudemus. He certainly exercises his own judgment throughout in selecting between these two,
and also in drawing from that other third source which it appears probable that he had before him. He is, as we have seen, less religious than Eudemus, but, like Eudemus, he is more practically moral and less philosophical than Aristotle. A striking instance of this is in i. i. 4–8, where he wishes to confine the term ἐνέργεια to functions implying moral consciousness and an act of the will. He uses new psychological terms to express the phenomena of volition, and asserts free will more dogmatically than Eudemus had done. These characteristics reflect the position of the Peripatetic School at the time when the work was written. The evidences of decline in philosophy are manifold, but in this respect it must be remembered that the Peripatetic School of this period shared in a general change which was passing over the mind of Greece (see infra, Essay VI.). The transition to the modern point of view, in which the moral ego was to be made the central consideration, was now taking place. Zeno arrived at Athens not long after the death of Aristotle, and it is not impossible that by the time when the Great Ethics were written, even the Peripatetics had to some extent felt the influence of his spirit. In fact, Spengel points out that in the Great Ethics, ii. xi. 7 we find a distinction which was unknown to Aristotle and first introduced by the Stoics, namely, that between φιλαρτόν and φιλήτοιν, βουλητόν and βουλητέα, &c.18 This leads to the consideration of the time when the work was written, but for even an approximate answer to this question there are no data.
general structure and manner of the whole shows that the work is a compendium later than the time of Aristotle, to which small points of usage, such as ἐπὶ ἡθικά, bear witness; but, so far as the writing goes, it need not have been much later than Theophrastus. Spengel, however, thinks that the Great Ethics stand on the same level of data and manner as the treatise On the Universe, which was probably a comparatively late composition. One final remark must be made about the Great Ethics, namely, that if they were written more than 35 years after the death of Aristotle, that is, after the carrying off of the library of Theophrastus to Asia Minor, copies both of the Nicomachean and the Eudemian treatise must have been still available to the Peripatetics, else this dry compilation, based on the two, could never have been written.¹⁹

Besides the three treatises on Ethics, we find also among the 'Works of Aristotle' a little tract On Virtues and Vices. Whether this was included by Andronicus in his edition, and if so, why? we cannot tell. It is a pleasing but decidedly un-Aristotelian production. In it the names of the chief virtues and vices are borrowed from Aristotle's list (Eth. Nic. ii. vii.), but they are not explained as mean states and excesses; there is nothing said about their formation; they are regarded externally, and their chief marks are noted in an inductive or observant spirit. The whole tract is in its aims and manner a good deal similar to the Characters of Theophrastus, and shows the same tendency of the Peri-

---

¹⁹ It is used to be fancied that in one place (i. v. 4) the Great Ethics quoted the Nicomachean. 'Ορι δὲ ἡ ἡθικὴ καὶ ἡ ἡθικὴ φύσεως, τοῦτ' ἐνοῦ ἐκ τῶν ἡθικῶν. Spengel, however, acutely conjectures that the true reading must be ἐκ τῶν αἰθήμων, which is confirmed by Stobæs, who says, with regard to the Peripatetic ethics, πρὸς δὲ τὴν ἡθικὴν τοῦτον τοῖς ἐκ τῶν αἰθήμων μαρτυροῦσα χρῆται. This writer then in the above passage is only paraphrasing, not quoting, Eth. Nic. ii. ii. 6.
patetic School to desert philosophy for physiognomical observation.

Plato's division of the soul into reason, spirit, and desire being accepted, it is here said that Thought (ϕαντασία) is the virtue of the first; Mildness and Courage of the second; Temperance and Continence of the third. Other virtues are then enumerated without reference to this classification. It is said that of various kinds of Justice the first is towards the gods, the next towards demons, the next towards fatherland and parents, the next towards the dead. The Liberal man is described as clean in his garments and his house, given to collect curiosities and to keep animals which have something peculiar or remarkable about them. Small-souledness (μικροψυχία) is well characterised as easily elated, as well as easily depressed; as petty, complaining, despondent, and abject. Virtue in general is said to create a good disposition of the soul, which feels quiet and orderly emotions, is in harmony with itself, and is the type of a well-ordered State. Such are the most noticeable features of this little essay, which gives a specimen of the aftermath of Aristotelian ethics, not necessarily later than the time of Theophrastus.

From these inferior Peripatetic works we may now turn back to examine the structure of that great treatise, which is our immediate concern, and which comes to us entitled Nicomachean Ethics, or Ethics of Nicomachus. Of Nicomachus himself scarcely anything is known. Eusebius (Prosp. Evang. xv. 2) quotes the following notice from Aristocles\(^{20}\) the Peripatetic: "After the death of Pythias,

\(^{20}\) This Aristocles is reputed to have been the teacher of Alexander Aphrodisias, in which case he lived at the beginning of the 3rd century A.D. Among other works he appears to have written a History of Philosophy. But his authority for facts about Aristotle and his son must be considered very slight.
the daughter of Hermias, Aristotle married Herpyllis of Stageira, by whom was born to him a son—Nicomachus. This son is said, when left an orphan, to have been brought up by Theophrastus, and while still a youth to have died in war.' The tradition, however, of the early death of Nicomachus, 'in war,' is not consistent with the notice of him by Suidas (sub voce), which speaks of him as a philosopher, the scholar of Theophrastus, and the author of six books of Ethics, and of a commentary on his father's physical philosophy. These 'six books of Ethics' may in all probability be a confused reference to our Nicomachean treatise. In Diogenes Laertius also the title of this work seems to have caused a confusion with regard to the authorship. See Diog. Laert. viii. viii. 2. 'Nicomachus, the son of Aristotle, says that he (Eudoxus) considered Pleasure to be the chief good,' where the reference is to the mention of Eudoxus, Eth. Nic. x. ii. 1. Cicero (De Finibus, v. 5) says, 'Let us hold fast to Aristotle and his son Nicomachus, whose scientific treatise on morals is said indeed to have been the work of Aristotle, but I do not see why the son should not have been a match for the father.' 21 This passage is very valuable, not for the opinion of Cicero, which is worthless, but for the evidence which it affords that during or just after the process of recension by Andronicus, Cicero had heard the Ethics 'of Nicomachus' talked of by name, and also attributed to Aristotle. This one fact seems sufficient to dispel the notion which was apparently started at a far later and less well-informed period (see above, page 31) that the Nicomachean Ethics were 'addressed to Nicomachus.' In this matter we

21 'Quare tenesmus Aristotelem et ejus filium Nicomachum; eujus accurate scripti de moribus libri dicuntur illi quidem esse Aristotelis; sed non video cur non potuerit patri similis esse filius.' This judgment of Cicero's is not based on critical examination, for he here is referring to the Nicomachean Ethics for a doctrine not to be found in them, so that it is probable he only knew the character of the work by hearsay.
may safely go back to the belief entertained in the age, and we may even say in the circle, of Tyrannion and Andronicus, that the title of the work indicated that it was written by Nicomachus, but that it was really by Aristotle. We may safely adopt this belief of a particular period of antiquity, because it is so thoroughly borne out by internal evidence. None among all the works of Aristotle is more definitely marked with all the signs of genuineness than the greater part of this treatise. We have here all the qualities of an original work, the merits and faults of a fresh enquiry; style, manner, the philosophy, the relation to Plato, all bespeak for this book the actual composition of Aristotle himself, except in certain disputed portions. The question then arises, why it was entitled *Ethics of Nicomachus?* to which only a conjectural answer can be offered. The simplest explanation is that this was originally a mere name of contradiestinction. The *Ethics of Eudemus* were probably so called because they were actually written by Eudemus, either during the lifetime of Aristotle, or soon after his death. The *Great Ethics* may have been so entitled from the vanity of their author, who fancied that he had achieved a combination which united all the merits of the other two treatises. The genuine work of Aristotle may have been placed by Theophrastus into the hands of Nicomachus for such amount of editing and arrangement as may have been required for a probably not altogether finished and complete treatise; and then to distinguish it from the *Eudemian Ethics*, perhaps by this time already written, the name of the son who edited the book may have been used to designate it, while the name of the father, who had written it, was superseded. In short, it may not improbably have been the exigencies of the Peripatetic school-library, and the necessity of distinguishing by

---

22 In the list of Diogenes we find enumerated *Great Posterior Analytics* (ἀναλυτικών εὐγενέστερον μεγάλου α', β').
some external mark first two and afterwards three rolls on
the same subject, and not much differing in size, that led
to the particular naming of the three treatises. This, how-
ever, is mere conjecture. We shall now endeavour to see
what traces of an editorial hand the *Nicomachean* treatise
exhibits.

Leading straight on with this object in view, we arrive
at the end of Book IV. without having our suspicions
aroused, or our attention arrested, by any symptoms of inter-
polation. All might very fairly be considered to have been
written consecutively by the same hand. But in the last
chapter of Book IV. we come to a check. This chapter
ought to have treated of the two virtuous feelings, Modesty
and Indignation. But the latter of these is left out, and the
discussion on the former is unfinished. What is apparently
an ingenious editorial interpolation of two lines and a half
serves here to wind up Book IV. and to connect it with
Books V. and VII. After the statement that Modesty can-
not be considered, strictly speaking, a virtue, it is here added:
‘Neither is Continence a virtue, but a sort of mixed quality.
We shall treat of it subsequently; at present let us speak of
Justice.’ And then Book V. opens with the sentence:
‘But about Justice and Injustice we must consider with
what sort of actions they are concerned, and what sort of a
mean state is Justice, and between what extremes the Just
is a mean.’

The three books, V., VI., VII., which follow are common
to both the *Nicomachean* and the *Eudemian* treatise, and
their authorship is a question to be discussed presently; but
looking at the composition of the three books externally
there is nothing *prima facie* to prevent us believing that
they were written consecutively, though it is true that a piece
either of mal-arrangement or of unskilful editorship shows
itself in the last chapter of Book V., which appears to be superfluous.

Book VII. ends with a piece of editorial joining: 'We have treated of Continence and Incontinence, Pleasure and Pain; it remains for us to speak of Friendship.' Book VIII. begins: 'Next in order after the foregoing would come the investigation of Friendship.' And then Books VIII. and IX. are consecutively written down to the last line of the latter book, which looks as if it had been interpolated by the editor:—'On Friendship, then, we have said our say; the next point to discuss will be Pleasure.' For Book X., which is consecutive and complete in itself, ignores the previous ending and commences with the words: 'Perhaps it follows next to treat of Pleasure.'

These collisions, or repetitions, where the last sentence of one book is ignored or repeated by the first sentence of the succeeding book, are not only in themselves highly inartistic, but they are not in the manner of Aristotle. In the Eudemian Ethics the same sort of collision occurs between Books I. and II., Books III. and IV., and Books VI. and VII. But in none of these cases is the awkwardness quite so glaring as in the transition between Books VII.—VIII., IX.—X. of the Nicomacheans. It seems, however, allowable

---

23 No instance of this sort of thing occurs all through the Organon, the Physics, the treatise On the Heavens, that On the Soul, that On the Generation of Animals, or the History of Animals,—that is to say, all through the more finished of Aristotle's compositions. In the Metaphysics, which are known to have been left incomplete, there is a repetition in the beginning of Book VI. of the words at the end of Book V. In the Politics (also unfinished) the beginning of Book II. repeats to some extent the end of Book I. And in the Rhetoric, the third book of which seems incomplete, the opening of that third book repeats a long sentence from the end of Book II. We cannot say that in either of these cases the writing had received the last hand of Aristotle. He probably, in each case, began the latter book in forgetfulness of the end of the former one, and never revised the writing as a whole.
to conjecture that Eudemus first set the example of this mode of writing, according to which each book or section of a treatise takes, as it were, a fresh start, and recapitulates in its opening sentence the point in the discussion which had been arrived at. This looks very like a reminiscence of oral lectures. Supposing a book to coincide in matter and in length with an oral lecture on the same subject, it is easy to suppose the lecturer concluding his address for the day by saying: 'I have now given you my views on Friendship, the next subject in our course will be Pleasure;' and then the following day he would quite naturally open his lecture with the words, 'The next subject in our course is Pleasure.' And it is comprehensible that the disciples of Aristotle, accustomed to oral endings and beginnings of this kind, should have inappropriately applied them to the divisions of literary composition. Eudemus having exhibited this practice, Nicomachus (or the unknown editor, whoever he was) appears to have adopted it with the view of giving unity to the different parts of the treatise put together by him, or arranged, or revised.

If these joinings at the ends respectively of Book IV., Book VII., and Book IX. be considered to be editorial interpolations, they would appear to indicate that the Nicomachean Ethics are made up of four separate portions, written at different times from each other, and yet having all a common scope and a reference to a common ground plan previously sketched out for a system of morals in which each portion was (more or less roughly) adapted to find its place. At one time, indeed, there was a theory—but this has been now abandoned—that the work was resolvable into small isolated tracts, whose names appear in the Catalogue of Diogenes, and which had been amalgamated by an editor into the treatise as we now possess it. Such names as the follow-
ing suggested this hypothesis: Περὶ δικαιοσύνης δ', περὶ ἡδονῆς α', περὶ τάξινου γ', περὶ φιλιᾶς α', ἡθικῶν ε', περὶ ἡδονῆς α' (repeated). περὶ ικουσίου α', θέσεως φιλικά λ', περὶ δικαίων β'. Some colour was given to the notion that these separate works, or opuscula, were the materials out of which the Nicomachean Ethics were afterwards put together, by the peculiar separate treatment which Aristotle gave to the Voluntary, Friendship, and Pleasure, when dealing with these subjects in the course of his system. But the impression of organic unity which the work leaves upon the mind, dispels the idea that the parts can have been, in the way suggested, prior to the whole. We see that the plan of the whole was present to the author's mind at starting, and was carried out to the end, and that all the parts were worked out in subordination to this general plan. Of the works mentioned in the Catalogue we know nothing certain, but we have endeavoured (above, page 14) to form a probable conception of their nature. And it seems, on the whole, highly doubtful whether any of them correspond with any part of the writings which have come down to us under the name of Aristotle.

We give up, then, the attempt to resolve the Nicomachean Ethics into a congeries of minor works. But, at the same time, we may allow that there are internal reasons for believing that the work, though conceived as a whole, was not executed all together at one time. We have already seen traces of an editor putting together four separate portions: let us now examine these. The first portion (Books I.–IV.) starts the question, What is the End-in-itself or Practical chief good? gets an answer involving the term Virtue; then by the analytical process is led on to a theory of the function and nature of Virtue; then, as its definition brings in a term indicating deliberate action of the Will, this is analytically followed up, and a little treatise on the Voluntary in its
various forms (probably written for the place which it occupies) is introduced, and then the law of Virtue, as a state of balance, is exemplified in application to all the separate virtues, recognised as such by the Greeks. Thus far we see Aristotle to have written; if he wrote further his MS. at this point was mutilated, and something was lost. Or, he may, from some cause, have put aside his writing at this point, while, in the meantime, he took up the working out of his ethical system from another starting place. This first portion (Books I.-IV.) remained, at all events, analytically consecutive, and almost complete in itself—with the exception that in four places it postponed certain matters for future enquiry; namely, i. v. 7 defers the consideration of the philosophic life in respect of its capacity for producing happiness; i. vii. 7 promises a renewed discussion on the question within what limits a man’s independent happiness is affected by social relationships; ii. vii. 16 indicates that a separate disquisition is to be expected on Justice, divided into two species; ii. ii. 2 promises an account of the Right Law as given by the Intellect (ὁρθὸς λόγος) and its relation to the different virtues.

The unfinished last few lines of Book IV. are eked out by an editorial allusion, and then follow Books V., VI., and VII., of which we may say at once that they were either written at a later period, and in a different vein, by Aristotle; or else they were the work of Eudemus, in whose Ethics, verbatim, they reappear.

Leaving this question, for the moment, in abeyance, we proceed to the third portion of the Nicomachean Ethics, namely, the treatise on Friendship contained in Books VIII. and IX. The only evidence for this having been composed quite separately—that is to say, that Book X., commencing with the treatise on Pleasure, was not a consecutive part of
the same composition—is found in that little line which finishes Book IX., and which makes the beginning of Book X. read so awkwardly (see above, p. 43). But this by itself would not be sufficient to establish such an hypothesis, for the editor might have introduced this, out of mere false taste, into a perfectly consecutive writing of Aristotle’s, through unwillingness to see a Book concluded 24 with a fragment of poetical quotation, thus:—"Whence the saying,

"Good you will learn from the good."

And it seems not unlikely that the same editor introduced a similarly unnecessary tag to wind up Book VIII. (see viii. xiv. 4 and note). There is, however, an appearance of separateness about the treatise on Friendship, for in three places (viii. ix. 1, viii. xiii. 1, ix. iii. 1) it uses the phrase ἐν ἀρχῇ, ‘at the outset,’ in reference to the earlier chapters of Book VIII., which shows that Aristotle in these passages only carried back his mind to the beginning of the present piece of writing. Again, when he commences by describing Friendship as ‘a sort of virtue, or implying virtue,’ he ignores altogether that more superficial quality which he had mentioned in his list of the virtues (Eth. Nic. ii. vii. 13) under the name—Friendship. This would suggest that Aristotle had taken up the present subject at some little interval after writing his first ethical book, and indeed, while writing these pages, seems to have had his mind very much concentrated upon an effort to solve the problems which occur in the Lysis of Plato, and to the solutions of which he brought his own analytic method and philosophical forms. At the same time, while writing this treatise to some extent in a separate way,

24 That Aristotle was not averse to such endings we see from the conclusion of Book XI. of the Metaphysics,

τὰ δὲ ἄτα ὧν βοiliation πολλεσθαι κακῶς
ὅκε ἀγαθὸν πολυκοραίῃ ἐλε κολλανος ἔστω.
be evidently wrote it to form part of his ethical system. The very first words of Book VIII. show this, for he says, 'After this, it would follow to treat of Friendship, for it is a sort of virtue, or implies virtue.' And besides general expressions of the author's purpose to confine himself to an ethical point of view (see viii. i. 7, ix. ii. 2), we find two direct references to the earlier books of the Ethics (compare ix. ix. 5 with Eth. Nic. i. viii. 13, and ix. iv. 2 with iii. iv. 5).

A reference forward to Book X., which occurs in ix. ix. 8, cannot be with absolute certainty pronounced to be an interpolation. And there is a reference back from x. ix. 1 to these books. Book IX. is written in Aristotle's best manner and in the same tone as Book X. So, on the whole, it seems likely that the awkward joining between Books IX. and X. does not indicate a break in the MS., but is merely the result of editorial officiousness in dealing with a continuous piece.

If so, the Nicomachean Ethics are resolved not into four, but into three portions—namely, the earlier books, the disputed middle books, and the three concluding books taken as a whole. Book X. rounds off the treatise; it answers in the most decisive way the question started at the commencement of Book I., and Aristotle then says (x. ix. 1), that 'having sufficiently treated in outline of Happiness, the Virtues, Friendship, and Pleasure, his design might be considered to have been completed,' but that for the realisation of all which he has indicated social institutions, both private and public, will be required; and he thus ends his Ethics with a transition to the Politics.

That Aristotle, in summing up what he thought might be considered a complete ethical system, should have specified the leading topics of Books I.–IV. and VIII.–X. of his treatise, and should have omitted any mention of the
subjects dealt with in Books V.–VII., seems a strong argument to prove that, at all events when he was writing Book X., he had not written the disputed middle books. Another argument in the same direction is, that while the three concluding books of the *Ethics* refer abundantly to Books I.–IV., they never make a single reference to Books V.–VII., though there was much opportunity for their doing so. For instance it seems peculiar that in all which is said about Justice in Book VIII., there should be no allusion to the discussions of Book V., and that contemplation (\(\thetaε\o\o\p\i\a\)) should be treated of in Book X., without any recapitulation of what was said of the nature of Philosophic Wisdom (\(\sigma\o\o\p\i\a\)) in Book VI. That the treatise on Pleasure could have been written as it stands at the beginning of Book X., if Aristotle had previously written that other treatise on the same subject for what was to form Book VII. of the same work, is utterly impossible.

These observations are the first which strike us with reference to that middle portion of the *Nicomachean Ethics* which we have hitherto left unconsidered. Aristotle had not written it, at the time when he wrote what were to be the concluding paragraphs of his treatise. Yet while he wrote these, he cannot have considered his work, from a literary point of view, to have been finished. For he had given promises in the earlier part of it, which were as yet unfulfilled. We have seen how (*Eth. II. vii. 16*) he had promised a separate discussion 'on the two kinds of Justice, and in what sense each of these might be considered to be a mean state.' Now we might conjecture what actually occurred to have been this:—Aristotle went on writing about the different virtues until he came to the place where it would have been natural to fulfil his promise and discuss the nature of Justice. But here the thought entered his mind
to what an extent Justice was externally determined, that is
to say, was dependent on social and political conceptions. He perhaps felt, like Plato, that to treat of Justice was to
treat of Society. At all events, it is easy to understand that
he resolved to defer the special consideration of Justice, till
he could give his mind to it in connection with the more
purely political part of the investigations before him. For
he does not separate ethics from politics, but calls ethics
from the outset  ' a sort of politics.' Laying aside, then, his
discussion of the Virtues before he had completed it by a
discussion on Justice, he went on with his ethical system at
a point where he could see his way beforehand, and proceeded
to analyse Friendship, and afterwards Pleasure, and the Su-
preme Good, as identified with Contemplation. When these
matters were worked out, he probably still deferred the
ethical investigation of Justice, and went on, after an in-
terval, to the composition of his Politics. In the meantime
he had thrown out, in Book VIII., many thoughts and sugges-
tions on Justice and Political Constitutions, which were
afterwards matured in the Politics.

The Politics of Aristotle have come down to us as quite
an unfinished work, and the question then arises, Did he ever
go back to finish his Ethics by supplying the middle part? We
may fairly conjecture that he had not only settled in his
own mind pretty much what this middle part should consist
of, but had also orally imparted this to his school, to whom
he may even have entrusted to some extent the working out
of his views. But the question is, Did Aristotle himself ever
fill up by his own writing the lacuna which he had left in
his Ethics? Some think that this point is settled at once by
apparent references to Eth. Nic. v. vi. vii. to be found in
the Politics and Metaphysics of Aristotle. The passages
are:
AUTHORSHIP OF BOOKS V. VI. VII.

(1) Pol. ii. ii. 4. Διόσπερ τὸ ἴσον τὸ ἄνυπεποιθόν σώζει τὰς πόλεις, ὃσπερ ἐν τοῖς ἡθικοῖς εἰρήται πρὸτερον.

(2) Pol. iii. ix. 3. ὅστ' ἐπεὶ τὸ δίκαιον τίσιν, καὶ διεφθαρται τὸν αὐτὸν τρόπον ἐπὶ τε τῶν πραγμάτων καὶ ὅσι, καθάπερ εἰρηται πρότερον ἐν τοῖς ἡθικοῖς.

(3) Pol. iii. xii. 1. διὸκεῖ δὲ πᾶσιν ἴσον τι τὸ δίκαιον εἶναι καὶ μέχρι γὰρ τίνος ὁμολογοῦσι τοῖς κατὰ φιλοσοφίαν λόγοις, ἐν ὅσι διώρισται περὶ τῶν ἡθικῶν· τὶ γὰρ καὶ τοῖς τὸ δίκαιον καὶ δεῖν τοῖς ἴσοις ἴσον εἶναι φασιν.

(4) Metaphys. i. i. 17. Εἰρήται μὲν οὖν ἐν τοῖς Ἡθικοῖς τὸς διαφορὰ τέχνης καὶ ἐπιστήμης καὶ τῶν ἄλλων τῶν ὁμογενῶν· οὐ δὲ ἕνηκα νῦν ποιώμεθα τῶν λόγων, τούτως ἑστίν. κ.τ.λ.

At first sight these four passages might seem to furnish powerful evidence in favour of the disputed books having been written by Aristotle himself, but a closer examination of them greatly diminishes the force of their testimony. No. (1) is supposed to refer to Eth. Nic. v. v. 6, but it does not even agree with it. For while Pol. ii. ii. 4. says that ‘equal retaliation preserves the State,’ Eth. Nic. v. v. 6 says that ‘Retaliation is a bond of union provided that it be on principles not of equality, but of proportion.’ In fact the remarks on Retaliation in the Ethics have all the appearance of being a development and improvement of those in the Politics. And the same impression is produced by comparing No. (2) with Eth. Nic. v. iii. 4, which it is supposed to quote. The latter passage discusses the law of Distribution in States (though a purely political question) with additional refinements beyond what we find in the Politics. But if internal evidence of this kind leads us to think that Book V. (as it stands) of the Ethics was written later than the Politics and was partly based on them, what becomes of these supposed references in the Politics to that Book? In a question of the kind internal evidence, resting on the character of the
the thought in one treatise as compared with that in another
treatise must always prevail over evidence consisting in a few
isolated words, which might most naturally have been inter-
polated. And against this as a canon of Aristotelian criticism
it is of no use to point to a consensus of MSS. For it must
be remembered that the works of Aristotle not only shared
with other ancient writings all the risks of corruption from
the vagaries of successive copyists, from the Christian era till
the invention of printing,—but also had in many cases pre-
viously gone through two distinct processes of editing, first
by the disciples of Aristotle, soon after his death, and secondly
by Andronicus of Rhodes about 50 B.C. Appeal to MSS.
therefore, unless we could get MSS. of the fourth century
B.C., can never, in such a question, be final. Applying these
considerations to the passages before us, we do not hesitate to
pronounce a belief that the words 'as has before been said in
the Ethics' in Nos. (1) and (2) are, in each case, the inter-
polated addition of either an editor or a copyist. Looking
to passage No. (3) we find that it contains no reference to any
particular part of the Ethics, but only an assertion that, with
regard to justice, people in general 25 agree to a certain extent
with those theories which have been formed by philosophers
upon ethical subjects.

Passage No. (4) undoubtedly refers either to Eth. Nic.
Book VI., or else—supposing that book to have been written
by Eudemus—to some lost book which bore the same rela-
tion to that book which the Nicomachean Ethics generally
bear to the Eudemian. The passage refers to a comparison
between Wisdom, Art, and Science, as having been made 'in

25 This passage might be compared
with Eth. Nic. i. 4. 2, where it is said
that 'refined thinkers and the many
are both agreed in giving the name
of Happiness to the highest of prac-
tical goods.' 'Οὐχὶ μὲν οὖν ἀχἐδαν
ὅτι τῶν πλείστων ἰσμαλογεῖται· τὴν γὰρ
εὐθεμίαν καὶ οἱ πολλοὶ καὶ οἱ χάριστες
λέγουσιν.'
the "Ethics," but this does not necessarily identify Book VI. as we now have it. The words might equally well apply to the original section of the "Ethics," now lost, of which Book VI. was a sort of paraphrase. We are left to internal evidence in deciding which of the two cases seems the more probable. The passage itself even if written by Aristotle would only prove that something answering to Book VI. had been composed by him for his "Ethics." But there is another hypothesis possible with regard to this passage, which we cannot forbear suggesting, even though we should be charged with temerity for so doing. It is this:—We have seen above (page 30) that a tradition is recorded by Asclepius to the effect that Eudemus had the MS. of the "Metaphysics" entrusted to him, and that he was dissatisfied with the form of the work, and kept it back, and finally edited it, after the death of Aristotle, completing parts of it by introducing extracts from other of Aristotle's writings. This tradition suggests the idea of considerable liberty of editorship; and if this was the case, it seems not impossible that Eudemus may have introduced the whole of this passage from "Εἰρήνηι μὲν οὖν down to "ποιησικῶν μᾶλλον," in express reference to his own account of "σοφία" (written originally for his own "Ethics," but afterwards incorporated also with the "Ethics" of Aristotle), and with the object of reconciling the differences between that account and the description of "σοφία" to be given in the "Metaphysics," and of indicating that the point of view in the two accounts was different, since in the "Metaphysics" the term "σοφία" was to be taken in a restricted sense, merely as the science of causes. 25 The passage contains the words, "the reason for our at present treating of the subject, is, &c.," and these are naturally thought to be the words of Aristotle,

25 See note on Eth. vi. vii. 3.
speaking in his own person. But they may, quite possibly, have been the words of Eudemus, speaking in the person of the Peripatetic School. The work of that school seems to have been a good deal co-operative, and the results of it to have been treated as common property.

(5) There is yet another passage in the Politics (iv. xi. 3) which is thought by some to guarantee the Aristotelian genuineness of the most disputed part in the Disputed Books,—the treatise on Pleasure at the end of Eth. Nic. Book VII. It runs thus:—Εἰ γὰρ καλὸς ἐν τοῖς ἰδικοῖς εὑρηται τὸ τῶν εὐδαιμονία βίον εἶναι τὸν κατ’ ἄρετήν ἀνεμπόδιον, μεσότητα δὲ τὴν ἄρετήν, τὸν μέσον ἀναγκαῖον βίον εἶναι βέλτιστον. This place is triumphantly claimed as referring to Eth. Nic. vii. xii. 3, and vii. xiii. 2, since in no other part of the Nicomachean Ethics does the word ἀνεμπόδιον occur. It may not occur,—yet still a further examination of the passage above quoted will show that it does not necessarily refer to Eth. Nic. Book VII., and does not relieve us from the task of trying the whole case by internal evidence. The premiss of the argument in the Politics consists in a summary of conclusions drawn from Books I., II., and X. of Eth. Nic. By a comparison of the way in which Aristotle elsewhere in the Politics uses the results arrived at in his Ethics, we learn with what a free hand, and in what a large manner he deals with them, often summing up in a word or two, and stating in a better way, conclusions which he had before laboriously attained. The same has been done here, and by the word ἀνεμπόδιος he sums up all that he had said about Happiness being τέλειος, and all the subsidiary discussions about the βίος τέλειος, and the necessity for favourable circumstances, because the want of these (Eth. Nic. i. x. 12) ἦμποδίζει τολ- λαίς ἐνεργείαις. (See also Eth. Nic. i. viii. 15.) In one word he here expresses all this, and says that 'the Happy
Life is an unimpeded life in accordance with virtue.' He is not referring at all to Book VII., but is stating with a new formula the conclusions of Book I. On the other hand, the writer of the Disputed Books, who is throughout much influenced by the Politics of Aristotle, seizes on this new word, ἀνεμπόδιοστος, and uses it in the places mentioned, giving ἔντρογεια ἀνεμπόδιοστος as his definition of Pleasure.

This seems a far more probable account of the relation between Pol. iv. xi. 3 and Eth. Nic. vii. xii. 3, xiii. 2 than it would be to suppose that the former passage was written in reference to the latter ones, which were only concerned with Pleasure, and not with 'the Happy Life' at all.

It appears, then, so far as we have seen, that there is not sufficient external evidence in the shape of undoubted references to Books V., VI., VII. of Eth. Nic. made by Aristotle himself in other parts of his writings, to establish their genuineness. Let us endeavour to see what can be gathered as to this point from an examination of the books themselves. They are found in both the Nicomachean and the Eudemian treatise. The question is, to which treatise they originally belonged? And the first thing that strikes us is, that if these Disputed Books be read as iv., v., vi. of the Eudemian Ethics, there is nothing in them which interferes with the continuity of that work; the books appear as if in their natural place. On the other hand, if read as v., vi., vii. of the Nicomachean Ethics, that treatise is at once marred by many irregularities: first, by the appearance of two separate discussions on Pleasure, quite irrespective of each other; secondly, by a system of forced joinings of which the result is, that Aristotle is made to say (vii. xiv. 9), 'Having treated of Pleasure, we may now treat of Friendship;' and a few pages later (ix. xii. 4), 'Having treated of Friendship, it follows for us to treat of Pleasure;' thirdly, by a strange
ignoring in Books VIII.–X. of matters discussed in Books V. and VI., to which it would have seemed natural to refer.

We next proceed to note the references backwards made in these three books, and an examination of these shows that they correspond more closely with places in the earlier books of the Eudeman Ethics, than to similar places in the earlier books of the Nicomachean treatise (compare Eth. Nic. 27 v. i. 2 with Eth. Eud. III. v. 1–3; Eth. Nic. v. viii. 3 with Eth. Eud. II. viii. 10, and II. ix. 1; Eth. Nic. vi. i. 1 with Eth. Eud. ii. v. 1; Eth. Nic. vi. i. 4 with Eth. Eud. ii. iv. 1; Eth. Nic. vi. viii. 1 with Eth. Eud. i. viii. 18; Eth. Nic. vi. xii. 10 with Eth. Eud. II. xi. 4; Eth. Nic. vii. iv. 2 and vii. vii. i with Eth. Eud. III. ii. 6; Eth. Nic. vii. xi. 1 with Eth. Eud. I. v. 11; Eth. Nic. vii. xi. 2 with Eth. Eud. II. iv. 2–4; Eth. Nic. vii. xiv. 1 with Eth. Eud. I. v. 11).

We have seen above (page 46) that Aristotle promised (Eth. Nic. ii. vii. 16) to treat ‘of the two kinds of Justice, and in what sense each of these is a mean state,’ and (II. ii. 2) to treat ‘of the Right Law, and its relation to the different virtues.’ These, however, are general promises, and are only to a certain extent fulfilled in Books V. and VI. Much more particular promises are to be found in the Eudeman Ethics. See II. x. 19, where after speaking of the legal distinction between voluntary and deliberate acts, the writer says, ἀλλὰ περὶ μὲν τούτων ἔροινεν ἐν τῇ περὶ τῶν δικαίων ἐπισκέψει, and this promise is exactly carried out in Eth. Nic. v. viii. 6–12. Again, in Eth. Eud. II. v. 8 it is said, τὸς ἐδ’ ὁ ὀρθὸς λόγος, καὶ πρὸς τίνα δὲ ὁ ὀρθὸς λόγος, ἀποβεβλητώς λέγειν τὸ μέσον, ὑστερον

27 The words Eth. Nic. are used, here and subsequently, merely for the sake of convenience, to indicate those books which now stand as v., vi., viii., in the Nicomachean treatise, not as giving an opinion that they originally so stood; for, of course, the contrary conclusion is being pointed at.
AUTHORSHIP OF BOOKS V. VI. VII.

ἐπισκεπτέων, which minutely and verbally corresponds with Eth. Nic. vi. i. 1-3. Again, Eth. Eud. i. viii. 17-18 gives a very precise anticipation of Eth. Nic. vi. viii. 1-4; the words are, "Ως τοῦτ’ ἄν εἴη αὐτὸ τὸ ἄγαθον τὸ τέλος τῶν ἀνθρώπων πρακτών. Τούτῳ δ’ ἔστι τὸ ὑπὸ τῆς κυρίας πασών. Αὕτη δ’ ἔστι πολιτικὴ καὶ οἰκονομικὴ καὶ φρόνησις. Διαφέροντι γὰρ αὐτὶ αἰ ἔξεις πρὸς τὰς ἄλλας τῷ τοιαύται ἄναι πρὸς δ’ ἄλλης εἶ τι διαφέρονσι, ὑστέρον λεκτέον. Eth. Eud. iii. vii. 10, by the words ἔστι γὰρ, ὡσπερ λειχθυσίης ὑστερον, ἐκάστη πως ἀρετή καὶ φύσει καὶ ἄλλως μετὰ φρονήσεως, anticipates that doctrine about the raw material of virtue being completed by conjunction with Thought, which is given in Eth. Nic. vi. xiii., but of which no trace appears in the earlier Nicomachean books. In π. xi. i the Eudemian writer after starting the question whether it is the province of Virtue to keep the Will straight, or the Reason straight, says that the latter is the province of Continence. "Εστι δ’ ἀρετὴ καὶ ἐγκράτεια ὑστερον. Λεκτέον δ’ ὑστερον περὶ αὐτῶν, ἐστε δόσιν γε δικαίως τὸν λόγον ὅρθον παρέχειν ἡ ἀρετή, τοῦτο αἵτων. He says that people confound Continence with Virtue, and that he must show the distinction between them. The discussion is taken up again in Eth. Nic. vii. i. 4. That Virtue keeps straight the Will and the conception of the End to be aimed at, is a characteristic Eudemian doctrine, which reappears in Eth. Nic. vi. xii. 8, but this is a refinement in psychology not to be met with in Aristotle’s undoubted ethical books. There is no promise of a discussion upon Continence or Incontinence in Eth. Nic. i. iv. The interpolated words (iv. ix. 8) Οὐκ ἐστι δ’ οὐδ’ ἡ ἐγκράτεια ἀρετή, ἄλλα τεις μετής; διεισθέντω δὲ περὶ αὐτὴς ἐν τοῖς ὑστερον are apparently an editorial attempt to weld together Aristotle’s original conclusions with subsequent Peripatetic developments. On the other hand, Eth. Eud. iii. ii. 3 gives
valuable indication of the ambiguity of the term ἄκρασις (which has a different meaning in the table of the Virtues and in Eth. Nic. vii.), and then iii. ii. 15 promises a more exact discussion on the class of pleasures with which Intemperance is concerned: 'Ακριβεστέρον δὲ περὶ τοῦ γένους τῶν ἡδονῶν ἕσται διαφορέαν ἐν τοῖς λεγομένοις υστέρον περὶ ἕγκρατείας καὶ ἄκρασις. This is fulfilled in Eth. Nic. vii. iv. Finally, there is in Eth. Eud. i. v. 11 a passage which refers us forward to the treatise on Pleasure at the end of Eth. Nic. vii., and at the same time sketches out the intermediate subjects to be treated of. After discussing the Three Lives (political, philosophical, and voluptruous), the writer says, Τούτων δ’ ἡ μὲν περὶ τὰ σώματα καὶ τὰς ἀπολαύσεις ἡδονή, καὶ τὰς καὶ ποιὰ τις γίνεται καὶ διὰ τίνων, ὅσα ἄδηλα, ὅσ’ οὖ τίνες εἰσὶ δεῖ ζητεῖν αὐτὰς (i.e. bodily pleasures) ἀλλ’ εἰ συντείνουσι τι πρὸς εὐδαιμονίαν ἢ μή, καὶ πῶς συντείνονται, καὶ πότερον, εἰ δεῖ προσάπτειν τῷ ζητεῖν καλάς ἡδονάς τινας, ταῦτας δεῖ προσάπτειν, ἢ τούτων μὲν ἄλλων τινα τρόπον ἄνδρες κοινωνεῖν, ἄπεραι δ’ εἰσὶν ἡδοναὶ δ’ ἢ εὐλόγως οἶονται τὸν εὐδαιμόνα ζητεῖν ἢδόνως καὶ μῆ μόνον ἀλύπως. Ἀλλ’ περὶ μὲν τούτων υστέρον ἐπὶ σκεπτέον, περὶ δὲ ἀρετῆς καὶ φρονήσεως πρῶτον θεωρήσωμεν. The question here started is one not touched upon in the undoubted Aristotelian books, namely: Assuming that there are higher pleasures, and that pleasure of the highest kind is identical with Happiness and the chief good, is there no place left in a moral system for the lower, or bodily, pleasures,—are not these to be admitted as contributaries to Happiness, or are they to be stigmatised as absolutely evil? This question is taken up, and to some extent answered, in Eth. Nic. vii. xiv.

The Disputed Books are not afterwards alluded to in the Nicomachean Ethics, but their contents are not without recognition in subsequent books of the Eudemian treatise.
AUTHORSHIP OF BOOKS V. VI. VII.

For instance, see Eth. Eud. vii. x. 10, where proportion in Friendship is illustrated by the joining of the diagonal of a square. This illustration is worked out with some detail in Eth. Nic. v. v. 8; it is here cursorily mentioned, the understanding of what is meant being assumed: "Ο δὲ ὑπερέχουσα τούντιον στρέφει τὸ ἀνάλογον, καὶ κατὰ διάμετρον συζεύγυσιν. And the same chapter, § 26, asks, Πῶς γὰρ κοινωνήσει γεωργὸς σκυτότομος, εἰ μὴ τὸ ἀνάλογον ἰσασθήσεται τὰ ἑργά; which takes us back to the discussions on value and price in Eth. Nic. v. v. Eth. Eud. viii. iii. 1. says, Καὶ περὶ ἡδονῆς δὲ εἰρηται τοῦτον τι καὶ πότε ἄγαθον, καὶ ὅτι τὰ τε ἀπλῶν ἡδία καὶ καλά, καὶ τὰ τε ἀπλῶν ἄγαθὰ ἡδία. This is a reference to Eth. Nic. vii. xii., beginning "Οτι δ’ οὐ συμβαίνει διὰ ταῦτα μὴ εἶναι ἄγαθον μηδὲ τὸ ἀριστον, ἐκ τῶν δὲ δῆλον.

The system of references backward and forward, above quoted, seems to show a very close connection between the Disputed Books and the other books of the Eudemian Ethics. But, beside this, there is also a remarkable coincidence between the style and manner of these Books, and that which we find consistently employed by the Eudemian writer. We have already (above, page 29) remarked on his peculiarly explicit mode of introducing literary quotations, and this peculiarity is found in the Disputed Books (See Eth. Nic. v. ix. 1, 'As Euripides strangely wrote;' v. ix. 7, 'As Homer says that Glauceus gave to Diomede;' vi. ii. 6, 'Wherefore rightly Agathon;' vi. iv. 5, 'As also Agathon says;' vii. vii. 2, 'As Homer says in the Margites;' vi. ix. 1, 'Wherefore Euripides;' vii. i. 1, 'As Homer has described Priam saying of Hector;' vii. vi. 3, 'As Homer says of Aphrodite;' vii. x. 3, 'As Anaxandrodes jested;' vii. x. 4, 'As Evenus also says.' Throughout these Books there are only three verses given without their author's name; one is mentioned as 'a proverb,' v. i. 15; one is called 'the prin-
ciple of Rhadamanthus,' v. v. 1; one alone is given without name or note, vii. xiii. 5. Even where there is no quotation this literary explicitness sometimes exhibits itself, as in vii. ii. 7, 'Neoptolemus in the Philoctetes of Sophocles;' and vii. vii. 6, 'The Philoctetes of Theodectes when bitten by the snake, or Cercyon in the Alope of Carcinus.' On the other hand, in the seven undoubted ethical books of Aristotle there are altogether sixteen places where verses are quoted, of these twelve are without any indication of authorship or source; in two places the name of Homer is mentioned; in one the name of Hesiod, and one couplet is given as 'the Delian inscription.') Taken by itself this would be not worth mentioning, but when taken with a number of other things which all testify in the same direction, it may be allowed consideration among the mass of cumulative evidence.

But far more important than this is the agreement of philosophical phraseology between the Disputed Books and the Eudemian Ethics, of which a striking instance is to be found in the use of the word ὅρος, to express a 'standard,' 'definition,' or 'differentiating mark.' This formula does not once occur in the undoubted ethical books of Aristotle, but apparently some time after he had written these he began to write his Politics, and in the meantime he had found out its convenience for the discussions which he had in hand; so, accordingly, in the Politics ὅρος, in this logical sense, very frequently occurs.28

The Eudemian Ethics were clearly written subsequently to the Politics of Aristotle, and the writer of them takes up

28 See Pol. ii. vi. 9: ἂλλα βελτίως ὅρος τὸ σωφρόνοις καὶ ἐλευθέρως. ii. vii. 16: ὡς οὖν ἄριστος ὅρος τὸ μὴ λυπητέλει τοῖς πρέπτοις. iv. viii. 7: ἄμυτοκρατίας μὲν γὰρ ὅροι ἁρετῆ, ὀλγαρχίας δὲ πλούτως, ὕδατος δὲ ἐλευθερία. And so on in about sixteen similar places.
the formula as being by this time in vogue in the Peripatetic School. We have seen how in Eth. Eud. ii. v. 8 he starts the question πρὸς τίνα δεὶ ὁρὸν ἀποβλέποντας λέγειν τὸ μένον, 'to what ultimate standard we ought to look in fixing the mean.' And we have seen, too, how in the last remaining paragraph of the work (Eth. Eud. viii. xii.) the phrase occurs: καὶ οὗτος ὁ ὅρος κάλλιστος . . . Τίς μὲν αὐτὸν ὅρος καλοκαγαθίας, καὶ τίς ὁ σκοπὸς τῶν ἀπλῶς ἀγαθῶν, ἐστιν εὐρημένον. The word ὅρος, then, in the sense of 'ultimate standard' had taken an important place in the Eudemian philosophy. But in the Disputed Books it is also noticeable (see vi. i. 1, τίς ἐστὶν ὅρος τῶν μεσοτήτων. vi. i. 3, τίς τ' ἐστιν ὁ ὁρθὸς λόγος καὶ τούτου τίς ὅρος. vii. xiii. 4, πρὸς γὰρ τὴν εὐθαμομολαγν ὁ ὅρος αὐτῆς).

The doctrine of the Practical Syllogism (see Essay IV.) does not appear in Eth. Nic. i.–iv., viii.–x., but in Aristotle’s treatise On the Soul, written probably later, the syllogistic form is used to express the process gone through by the mind in forming a practical resolution (see De An. iii. xi. 4). This application of the syllogism was worked out a good deal among the Peripatetics, as may be inferred from the treatise On the Motion of Animals, placed among Aristotle’s works, but probably not genuine. The Eudemian writer had evidently become familiarised with the application of the syllogism to the theory of moral action, and had perhaps himself helped to develop the doctrine. At all events, he makes considerable use of it. See Eth. Eud. ii. xi. 4: ὅσπερ γὰρ ταῖς θεωρητικαῖς εἰ ὑποθέσεως ἀρχαὶ, οὕτω καὶ ταῖς ποιητικαῖς τὸ τέλος ἀρχὴ καὶ ὑπόθεσις. Ἐν τούτῳ δεῖ τόδε ἱμαίνειν, ἀνάγκη τοῦ ὑπάρξαι, εἰ ἐστιν ἔκειν, ὅσπερ ἔκει, εἰ ἐστι τὸ πρόγνων δῶν ὁρθαί, ἀνάγκη τοῦ ἐϊναι. The Practical Syllogism appears in the Disputed Books, and, indeed, it is used as the great analytical instrument for resolving the phenomena of Incontinence in Book VII. But it is worthy
of notice how strikingly similar some of the phrases used in these Books are to the passage above quoted from the Eudemian Ethics. See Eth. Nic. vii. iii. 9: ἀνάγκη τὸ συμπεραν-θέν ἐνθὰ μὲν φανε τὴν ψυχήν, ἐν δὲ ταῖς ποιητικαῖς πράττειν εὐθὸς (where ποιητικά is used in the same peculiar way as above); vii. viii. 4: ἡ γὰρ ἀρετὴ καὶ ἡ μοχθηρία τὴν ἀρχὴν ἢ μὲν φθείρει, ἢ δὲ σώζει, ἐν δὲ ταῖς πράξεις τὸ ὅπο ἕνεκα ἀρχή, ὅστερ ἐν τοῖς μαθηματικοῖς αἱ ὑποθέσεις.

There is another minor formula in the use of which the Disputed Books show an agreement with the Eudemian Ethics, but not with the Nicomachean Ethics in which it does not appear; namely, the formula τὰ ἀπλῶς ἀγαθά. This occurs, as before quoted, in the winding up of the last remaining part of the Eudemian work, τὸ τὸ σκοπὸς τῶν ἀπλῶς ἀγαθῶν, ἐστω εἰρημένον. It is introduced in Eth. Nic. v. i. 9, where the ‘goods of fortune’ are specified, ‘which are always goods absolutely, but not always so to the individual.’ In v. v. 18 τὸ ἀπλῶς ἄφελμα is mentioned. In v. vi. 6 the just ruler, οὐ νῦν πλέον τὸ ἀπλῶς ἀγαθὸν αὐτῷ. In v. ix. 17 Justice is said to exist among those ols μέτεστι τῶν ἀπλῶς ἀγαθῶν. In vii. vi. 1, τὰ ἀπλῶς ἥδα are mentioned (cf. Eth. Eud. viii. iii. 1, above quoted), and in v. i. 10, vii. xiii. 1, we find a mention of τὰ ἀπλῶς κακά. It is observable that even in the Politics of Aristotle this formula does not appear to exist.

That the Disputed Books contain a later development of several points in ethical and psychological philosophy than can be found in other parts of the Nicomachean Ethics,

---

20 It is added that ‘men pray for these and seek after them, but they should not; they should pray that the absolute goods may be goods to them individually, and that they should choose what is good for themselves.’ This is in the same style with Eth. Eud. vii. xii. 17: τὸ ἐντὸς καὶ ἐφ-κεῖσθαι πολλῶν φιλοσ. But to say what men ‘ought to pray for’ is not after the manner of Aristotle.
and that in this respect they perfectly agree with the Eudemian Ethics will be shown in detail in the notes to the Books themselves. And it will be shown also that they exhibit in common with the latter a certain indistinctness of exposition and certain departures from the Aristotelian point of view. Perhaps enough has been said for the present to justify the conclusion to which we come that Books V., VI., VII., of the Nicomachean Ethics were written by the author of the Eudemian treatise as an integral part of that work, from which they were taken and transferred verbatim into the Ethics of Aristotle,30 either to fill up a gap caused by the loss of corresponding Aristotelian books, or else to supplement or complete a work which Aristotle himself had never finished. Which of the two alternatives is more credible, there are hardly grounds sufficient to enable us to pronounce. In either case we must assume that Aristotle had, in his oral teaching, led the way to almost all the conclusions contained in the books in question. The appearance which we find in Books V. and VI. of direct borrowing from other works of Aristotle’s, such as the Politics and the Organon, would rather favour the supposition that the compiler of these books had not before him any written exposition of this part of Aristotle’s ethical system.

With regard to previous opinions upon the subject of the Disputed Books, it may be mentioned that Casaubon threw out the suggestion that the treatise on Pleasure in Book VII. was written by Eudemus. This suggestion means that all the rest of the Nicomachean Ethics is by Aristotle, but that this treatise on Pleasure has been imported into its present place. This is, in short, an attempt to save the credit of the

30 We do not undertake to say whether this transference was made by Nicomachus, or some other early editor, or long afterwards by Andronicus.
Nicomecean work by removing from it an obvious excre-
scence. But the hypothesis is untenable, for though we can
understand Book VII as a whole being for some reason or
other imported from the Eudemian Ethics, and bringing
with it a superfluous disquisition, 31 it is impossible to believe
that any of Aristotle's editors would have brought into his
ethical work this superfluous disquisition out of the writings
of a disciple—by itself, to confuse and spoil the rest.

Some have entertained the view that this treatise on
Pleasure may have been an earlier essay by Aristotle himself,
found among his MSS., and introduced, in order to preserve
it, into its present place. But close examination of the
treatise shows that it is not earlier, but later, than the treatise
on the same subject in Book X., on which it is based in the
same way as other parts of the Eudemian Ethics are
based on Aristotle's writing. It chiefly follows Book X., but
also to some slight extent it tries to improve upon the con-
clusions of Aristotle.

Fritzsch, the learned editor of the Eudemian Ethics,
while conceding that VI. and VII. of the Disputed Books
were the work of Eudemus, maintains that Book V. is the
writing of Aristotle, with the exception of the last chapter,
which he considers to be a fragment from a corresponding
book on Justice by Eudemus, now lost. This theory would
imply a system of mutual accommodation,—it would imply
that the Eudemian Ethics had lost a book on Justice, which
was supplied out of the Nicomeceans, and that the latter
treatise had lost, or wanted, a book on the Intellect in rela-

31 It is, however, surprising that the editor, whoever he was, in trans-
ferring Book VII should not have stopped short at the end of the dis-
cussion on Incontinence. By going mechanically to work and transferring
the Book bodily, he marred the sym-
metry of the Nicomecean work, but at the same time furnished an im-
portant piece of evidence towards
deciding the authorship of the Dis-
puted Books.
tion to morals, and a book on Continence and Incontinence, both which books were supplied out of the *Eudemians*. This seems a rather too elaborate hypothesis, but we cannot altogether deny its possibility. The genuineness, or otherwise, of *Eth. Nic.* v. must be considered on the reasons which can be urged either for or against it. Fritzsche’s arguments are a little far-fetched. In the first place he goes to the *Great Ethics*, which are allowed to follow the *Eudemian* treatise very closely, and looking at the string of difficult questions on Justice (*Mag. Mor.* ii. iii. 3–30) which we have already mentioned (page 35), he asks—Whence can these difficulties have been derived?—and concludes that they must have originally been started in the *Eudemian* Book on Justice, now lost. This reasoning, however, seems very unsatisfactory; for the difficulties referred to are not exclusively connected with Justice, some of them are general questions of casuistry: again, the writer of the *Great Ethics* does not introduce them while discussing the subject of Justice, but after his discussion upon the Intellectual Virtues; and furthermore we have above seen reason to believe that this writer had a third source besides the *Nicomachean* and *Eudemian Ethics* from which he drew his matter (see page 34), and from which he may, very likely, have drawn the special matter in question. This first argument then may surely be discarded. Fritzsche in the second place points to the last existing chapter of *Eth. Eud.* (viii. iii. 1), where mention is made of ‘that culmination of the Virtues’ ἡν ἐκαλοῦμεν ἤδη καλοκαραγαθίαν. No prior place in the *Eudemian* treatise answers to this, and so he at once concludes that the passage referred to must have existed in the (supposed) lost book on Justice. But there is no obvious connection between καλοκαραγαθία and Justice; on the other hand there are doubtless several *lacunae*
in the Eudeman Ethics,\textsuperscript{32} even the beginning of Book VIII. is wanting, and the passage referred to may very well have existed there. If Book VIII. was originally of the same length as the other Eudeman books, a considerable number of chapters at its commencement must have dropped out, and it seems extremely probable that some of these were devoted to the consideration of a Virtue which was the result of all the other Virtues, and which the writer called καλοκαγαθία. Fritzsche's third argument is derived from Book V. itself (ii. 11) where there occurs a promise of a subsequent discussion on the question whether the moral education of the individual belongs to Politics or not (περὶ δὲ τῆς καθ’ ἐκαστοῦ παιδείας, καθ’ ἦν ἀπλῶς ἀνὴρ ἀγαθὸς ἐστι, πότερον τῆς πολιτικῆς ἐστὶν ἢ ἐτέρας, ὑστερον διοριστέον· οὐ γὰρ ἰσος ταῖντον ἀνδρὶ τ’ ἀγαθῷ ἐλναι καὶ πολιτείᾳ παντὶ). This, says Fritzsche, is fulfilled in Eth. Nic. x. ix. 9, sqq. and Pol. iii. iv. and iii. xviii., which proves that the above passage was written by Aristotle and not by Eudemus. When, however, we examine the places referred to we do not find that they answer to the promise given, and so far from establishing that the passage in question was written by Aristotle, they induce a contrary conclusion. In Eth. Nic. x. ix. 9, sqq. Aristotle lays it down as strongly as possible that all education must be dictated by the state; he admits that there must be a special treatment of individuals, in education as in medicine, but in each case he considers that the special treatment is only the skilful application of general laws belonging to the general science, whether of Medicine or of Politics. There is not a word about the moral education of the individual standing apart from Politics and belonging to some separate science.

\textsuperscript{32} As for instance, Eth. Eud. iii. 3; refers back to something lost from the preliminary catalogue of the Virtues:
This in fact was the *Eudemian* view, which, as we have seen (page 24), tried to separate Ethics from the more general science of Politics. Aristotle afterwards, *Pol. viii. i, 3*, decisively pronounces that education should all be public, under state-control, and reduced to one standard. In the passages of the same work to which Fritzche refers us we find—not a fulfilment of the above promise, but rather the source which suggested to the *Eudemian* writer to attempt a refinement upon Aristotle. In *Pol. iii. iv., iii. xviii.* the question is started whether the virtue of the Man and of the Citizen is identical? It is answered that States vary, but in the Best City the same education and habits produce the good man and the citizen with constitutional qualities. The writer of *Eth. Nic.* Book V. gets a suggestion from this discussion and promises to investigate, as a part of his ethical treatise, whether the moral education of the individual does not belong to a sphere separate from Politics. The *Eudemian Ethics* were mutilated or unfinished; the part answering to the latter half of *Eth. Nic. x.* is lost, or was never written; so we cannot tell whether this promise was ever fulfilled in the *Eudemian* treatise,—it certainly never was in the *Nicomachean*. Fritzche is doubtless right in saying that the last chapter in Book V. is out of its proper place, but there is nothing to show that it is written by a different hand from the rest of the book. Nor have we thus far seen anything to invalidate the opinion that the three Disputed Books must go together and that they originally formed part of the *Eudemian Ethics*.

Those, therefore, who hold that these books were written by Aristotle, must be prepared also to maintain that Aristotle wrote the whole of the *Eudemian* treatise:—that is to say, that at a time when he had several great works, unfinished, on his hands, such as certainly the *Politics*, the *Meta-
physics, and the Poetics; and was engaged in carrying on the most multifarious researches in natural history and other sciences of observation; and had promised works on the Physiology of Plants, and On Disease and Health, so far as belongs to Physical Philosophy, which had never been executed, he set himself to re-write his own work on Morals, serving up his old materials again in a sort of paraphrase. One peculiarity of this would be that Aristotle, if he did this thing, made the statement of his ethical system so much worse, instead of better, than it was originally. In the Politics he frequently re-states conclusions arrived at in the Nicomachean Ethics; whenever he does so we are struck by the breadth, the freedom, and the firmness of his handling. But in the Eudemian treatise the opposite qualities are discernible; the writer of this treatise, even when stating Aristotle’s conclusions without variation, seems to cloud them over, so that we require to go back to Aristotle to get a clear impression. And when he treats, as in the Disputed Books, of subjects otherwise unexpounded, we do not feel that we know exactly what the views of Aristotle on these subjects really were. This argument against the Eudemian Ethics having been written by Aristotle, based on their obvious inferiority in point of execution, is not answered, as some appear to think, by pointing to the Laws of Plato, which are now accepted as a genuine re-writing of the Republic, though far inferior to that work in dramatic force, and in philosophic power. The cases are not parallel; for the Laws are considered to have been a senile production, written when Plato was between 80 and 90 years of age, whereas Aristotle did not live to be

---

more than 63 years old, and the works on which he was apparently engaged at the very end of his life are in his most vigorous and best manner. The *Eudemian Ethics* are unequal to these later writings in power and clearness, and they are unlike them not only in style, but also in matter, for the theology of the *Eudemian Ethics* is clearly different from that of *Metaphysics*, Book XI. But there is not only ground for believing that Aristotle did not write the *Eudemian Ethics*, but also much reason to believe that Eudemus did. We have positive testimony (above, page 31) that Eudemus wrote paraphrases of the works of Aristotle; we see that it was the custom of the Peripatetic School to do this, and that a second paraphrase called the *Great Ethics* was constructed on the top of the *Eudemians*; even those who defend the genuineness of the Disputed Books will hardly go the length of saying that this third treatise was also written by Aristotle. And furthermore, all the variations and divergences from Aristotle’s views as before expressed by him, which occur in the *Eudemian Ethics*, in theology, in psychology, in a tendency to physical explanations of moral phenomena, and at the same time in a tendency towards a peculiarly practical morality, are such as are in accordance with the direction known to have been followed by the Peripatetic School, and therefore would have been natural for Eudemus to exhibit. These are the considerations which have to be met by those who still think that Books V., VI., and VII. of the *Nicomachean Ethics* are the genuine work of Aristotle.

It would be tedious to sum up or repeat the conclusions arrived at in the foregoing pages. As we said at first, many questions must be left undeterminate or with a merely conjectural answer. We have before us in *Eth. Nic. I.–IV., VIII.–X.*, an unfinished, or mutilated, treatise, which so far as we possess it came straight from the hand of Aristotle.
What is wanting in this treatise is supplied from other works on the same subject written by members of the Peripatetic School. These works claim, with slight variations, to express the ideas of Aristotle himself, and for this reason probably they were included among the writings of Aristotle. Without considering these works to be entitled, on the ground of genuineness, to the position which they thus hold, we may be glad that they have been preserved. On the one hand they furnish a general conception of Aristotle’s views on several particular points; on the other hand they testify to a system of co-operation among the Peripatetic scholars, which Aristotle probably encouraged during his lifetime, and which the school continued to practise after his death.34

34 In justification of some of the opinions and conjectures put forward in the foregoing Essay, we will subjoin here a few particulars as to the order and sequence of some of Aristotle’s extant writings, so far as can be determined from internal evidence. This internal evidence does not consist merely in references from one book to another (for these are not always reliable—in some cases they are almost certainly interpolated), but still more in comparison of the thought in different books and the various degrees of maturity exhibited by the same conception occurring in different books. For instance, in the first chapter of the Prior Analytics, the Topics are referred to; therefore, either the Topics were written first, or else this reference is spurious. But—the doctrine of the syllogism is worked out with far more precision in the Analytics than in the Topics, therefore the former hypothesis must be accepted. A similar combination of verbal and real internal evidence is used by Mr. Poste (in Aristotle on Fallacies, or the Sophistici Elenchii, with a Translation and Notes, London, 1866, p. 204, sq.) to show that the Topics, with the exception of the eighth book, were first written of all the extant works of Aristotle; next the Analytics (Prior and Posterior); next the eighth book of the Topics; next the Rhetoric, Books I. and II.; and then the Sophistical Refutations. —After this Aristotle appears to have gone on to write his Ethics (which later obtained the name of Nicomachean); and then the Politics; and next the treatise On Poetry; from which he went back to add on the third book to his Rhetoric. Now, this sequence, if it be accepted, greatly strengthens the hypothesis which was submitted above (pp. 49–50), that Aristotle when he came in the course of his Ethics to the consideration of Justice, deferred this till a more convenient season. We can now see how he did what was similar on other occasions;—how, for some reason or other, he left the eighth book of the Topics unwritten till he had finished the Analytics; how he went on to
compose his *Rhetoric* before writing the *Sophistical Refutations*, which properly belong to the *Topics*; how he deferred writing the third book of his *Rhetoric* (on Style), and went on to his *Ethics*; how from the *Ethics* he proceeded to the *Politics*, but broke off writing them in the middle of his treatise on Education, in order to write a treatise on *Poetry*, which was a cognate subject; how the treatise on *Poetry* was left a mere fragment, while Aristotle went back to write his book on Style for the completion of his *Rhetoric*. All this shows a certain mode of procedure in writing. There is no reason to believe that the *Politics* or the *Art of Poetry* were ever completed. In the meantime Aristotle went on to the series of his Physical works, two of which (*On the Physiology of Plants and On Disease and Health so far as belongs to Physical Philosophy*) were promised by him, but, so far as we know, never executed. Other works, such as the *Meteorologica*, do not appear to have received the last hand. And to the list of Aristotle's unfinished productions we are inclined to add the *Nicomachean Ethics*. 
ESSAY II.

On the History of Moral Philosophy in Greece previous to Aristotle.

In the Ethics of Aristotle there are but few direct allusions to moral theories of other philosophers. Plato's theory of the idea of good, viewed in its relation to Ethics (I. vi.); Socrates' definition of Courage (III. viii. 6); Eudoxus' theory of Pleasure (x. ii. 1); and Solon's paradox (I. x.), are perhaps the only ones which are by name commented on. There are constant impersonal allusions to various opinions (the λεγόμενα on the subject in hand); some of these Aristotle attributes to 'the few,' that is, the philosophers; others he speaks of as stamped with the consent of 'the many and of ancient times.' (I. viii. 7.) But there is no connected history of ethical opinions or ethical systems to be found in this work. The reason for this is partly to be found in the fact that Aristotle appears to have only grown gradually into the habit (if so we may call it) of prefacing each science or branch of philosophy with a history of what had been accomplished previously towards the solution of its problems. Thus in the Organon there is no history of previous logic, only a brief remark in conclusion that nothing had

---

1 In the Eudemian books we find references (vi. xiii. 3) to Socrates' definition of Courage; (vii. ii. 1) to his opinion on Incontinence; and (v. v. 1) to the Pythagorean definition of Justice.
been done, before Aristotle to explain the syllogistic process. In the *Rhetoric*, it is merely said generally that previous writers had too exclusively devoted themselves to treating of appeals to the passions. After these works the *Ethics* were probably written. Then came the *Politics*, which contain an important review of some previous leading systems of political philosophy, but not exactly a history of these. The *Physical Discourse* and treatise *On the Soul* each commence with a collective statement of the opinions of previous philosophers; and Book I. of the *Metaphysics* (which were probably Aristotle’s latest work) consists of a history of metaphysical philosophy from Thales to Plato, in which it is endeavoured to be shown how each system was occasioned by its predecessor.

When Aristotle commenced his *Ethics* he had apparently not accustomed himself to taking that sweeping historical point of view, which more and more became characteristic of him. Else a sketch of the development of moral ideas in Greece, analogous to his sketch of the development of metaphysics, might have been essayed by him, and would have been of the highest interest. But there was another cause to prevent this, namely, the fact that morals had never yet been clearly separated from politics. Aristotle himself calls his ethical system ‘a sort of politics,’ and it was only by writing his own *Ethics* that he, tentatively and yet surely, established the limits separating the one science from the other. With this tentative attitude, he was not likely to attempt following out the thread of previous moral theory, as separate from the concrete of politics, duty to the state, and the like. And, at all events, he did not do so.

But the Peripatetic School gradually laid hold of the distinct nature of ethics, and the author of the *Great Ethics* prefixes to his book the following brief outline of the
previous progress of the science. 'The first to attempt this subject was Pythagoras. His method was faulty, for he made virtue a number, justice a cube, &c. To him succeeded Socrates, who effected a great advance, but who erred in calling virtue a science, and in thus ignoring the distinction between the moral nature (πάθος καὶ ἡδος) and the intellect. Afterwards came Plato, who made the right psychological distinctions, but who mixed up and confused ethical discussions with ontological enquiries as to the nature of the chief good.' In a shadowy way this passage represents the truth; for it is true that in the pre-Socratic philosophy, of which the Pythagorean system may stand as as a type, ethical ideas had no distinctness, they were confused with physical or mathematical notions. Also the faults in the ethical systems of Socrates and Plato are here rightly stated. But it is a confusion to speak of Pythagoras as a moral philosopher, in the same sense that Socrates and Plato were so, or to speak of Socrates succeeding Pythagoras in the same way that Plato succeeded Socrates. And even were the account more accurate, everyone will acknowledge that it is too barren to be in itself very useful.

In the following pages, then, we shall endeavour to carry considerations of this kind a little further, and to indicate, to some extent, the steps by which pre-Aristotelian moral theory developed itself in Greece. To do this is indeed necessary, since the views of Aristotle himself, as of any other philosopher, can only be rightly understood in relation to their antecedents.

Moral philosophy is a comparatively late product of national life. It presupposes the long, gradual, silent formation of Morals, which are the concrete of the nation's practical habits and ideas of life. Morals, like language, are anonymous in their origin (οὐδεὶς οἶδεν ἢ οὗ τῆς φάνη);
THREE ERAS OF MORALITY.

except in the case of one or two legislators, who by their laws may to some extent have moulded the life of the nation, or in the case of the founders of religions, who by the force of their intuitions may have expounded some new and organising principles of action,—no individual names are connected with the building-up of morality. Moral philosophy does not create; it only explains, and perhaps criticises, moral ideas. Moral philosophy itself dawns gradually into existence out of reflection upon the generally-accepted morality. In its first form it is the ordinary morality codified and formulated. Afterwards, it becomes more critical, and finally it may re-act upon and change morality itself.

Renouncing any attempt to trace a succession of systems of moral philosophy (which indeed did not exist), until we come to the limited period of development between Socrates and Aristotle, let us take a broader view of the subject, and divide morality into three eras; first, the era of popular or unconscious morals; second, the transitional, sceptical, or sophistic era; third, the conscious or philosophic era. These different stages appear to succeed each other in the national and equally in the individual mind. The simplicity and trust of childhood is succeeded by the unsettled and undirected force of youth, and the wisdom of matured life. First, we believe because others do so; then, in order to obtain personal convictions, we pass through a stage of doubt; then we believe the more deeply and in a somewhat different way from what we did at the outset. On these three distinct periods or aspects of thought about moral subjects, much might be said. The first thing to remark is, that they are not only successive to each other if you regard the mind of the most cultivated and advanced thinkers of successive epochs, but also they are contemporaneous and in
juxtaposition to each other, if you regard the different degrees of cultivation and advancement among persons of the same epoch. In Plato's Republic we find the three points of view represented by different persons in the dialogue. The question, What is justice? being started, an answer to it is first given from the point of view of popular morality in the persons of Cephalus and of his son Polemarchus, who define it to be, in the words of Simonides, 'paying to everyone what you owe them.' To this definition captious difficulties are started,—difficulties which the popular morality, owing to its unphilosophical tenure of all conceptions, is quite unable to meet. Then comes an answer from the sophistical point of view, in the person of Thrasymachus, that 'justice is the advantage of the stronger.' This having been overthrown, partly by an able sophistical skirmish, partly by the assertion of a deeper moral conviction,—the field is left open for a philosophical answer to the question. And this accordingly occupies the remainder of Plato's Republic, the different sides of the answer being represented by different personages; Glaucon and Adeimantus personifying the practical understanding which is only gradually brought into harmony with philosophy, Socrates the higher reason and the most purely philosophical conception. Almost all the dialogues of Plato, which touch on moral questions, may be said to illustrate the collision between the above-mentioned different periods or points of view, though none so fully as the Republic. Some dialogues, which are merely tentative, as the Euthyphro, Lysis, Charmides, Laches, &c., content themselves with showing the unsatisfactoriness of the popular conceptions; common definitions are overthrown; the difficulty of the subject is exposed; a deeper method is suggested; but the question is left at last without an answer. In others,
as in the *Hippias Major, Protagoras, Gorgias, and Euthydemus*, various aspects of the sophistical point of view are exposed; (on which we shall find much material for discussion hereafter); in all the dialogues a glimpse, at all events, of true philosophy is suggested; in a few only, as in the *Philebus*, is there anything like a proportion of constructive to the destructive dialectic.

Plato's wonderful dramatic pictures hold up a mirror to the different phases of error and truth in the human mind, so that we turn to his dialogues as to real life. But all reasonings on morality must exhibit the distinction existing between the popular, the sophistic, and the philosophical points of view. This distinction will be found marked in the *Ethics* of Aristotle, only Aristotle is less hostile than Plato to the popular conceptions, and rather considers them as the exponents of a true instinct with which his own theories must be brought into harmony. Also, being more concerned with the attainment and enunciation of truth than with recording its *genesis*, he does not dwell on the relation of the sophistical spirit to morality. He touches on certain sceptical and arbitrary opinions concerning morals which may be considered as the remnants of sophistry. But among these we must not reckon philosophical opinions with which he disagrees, since philosophy may be mistaken and yet be philosophy, if its spirit be pure.

Without laying too much stress on our three divisions, we may at all events regard them as convenient chronological heads. And let us now proceed to make some remarks on the characteristics of the first period of Grecian Ethics.

I. It has been said that 'before Socrates there was no morality in Greece, but only propriety of conduct.' ² This

² Hegel, *Geschichte der Philosophie*, ii. 43: 'Die Athener vor Socrates waren sittliche, nicht moralische Menschen.'
sentence conveys the same meaning as the argument in Plato's *Phaedo* (p. 68 D), that 'without philosophy there is no morality, for the popular courage is a sort of fear, and the popular temperance a sort of intemperance.' It rightly asserts that the highest kind of goodness is inseparable from wisdom, from a distinct consciousness of the meaning of acts—from a sense of the absoluteness of right in itself. 'Morality' according to this view only exists when the individual can say, 'I am a law to myself, the edicts of the state and of society are valid to me because they are *my* edicts—because they are pronounced by the voice of reason and of right that is in me.' It however puts perhaps too great a restriction upon the term 'morality,' as if nothing but the highest moral goodness were 'morality' at all. It seems absurd to characterise as mere 'propriety of conduct' the acts of generosity, patriotism, endurance, and devotion, which were done, and the blameless lives that were led, long before there was any philosophy of right and wrong. Indeed there is something that seems *more* attractive about instinctive acts of nobleness, than about a reasoned goodness. To some the innocent obedience of the child appears more lovely than the virtue of the man. Still instinct is inferior to reason, the child is less than the man; and if God makes us what we are in childhood, we must re-make ourselves in maturer age; and it is the law of our nature that what was at first only potential in us, and only dimly felt as an instinct, should become realised by us and present to our consciousness. The very word 'conscience,' on which right so much depends, is only another term to express 'consciousness,' and a man differs from a machine in this, that the one has a law in itself,—is moved, as Aristotle would say, *κατὰ λόγον*; the other is moved *μετὰ λόγον*, has the law both in and for himself.
Without entering into speculations on the origin of society, we may safely assert that, as far as historical evidence goes, the broad distinctions between crime and virtue seem always to have been marked. National temperament, organisation, climate, and a certain latent national idea that has to be gradually developed—these go some way to mould the general human instincts of right and wrong, and these produce whatever is special in the national life and customs and code of laws (for occasion calls forth legislation, and so a code of laws grows up); and thus men live and do well or ill, and obtain praise or blame, are punished and rewarded. But as yet there is no rationale of all this. It is an age of action rather than of reflection—of poetry rather than analysis. To this succeeds a time when the first generalisations about life, in the shape of proverbs and maxims, begin to spring up. These are wise, but they do not constitute philosophy. They seldom rise above the level of prudential considerations, or empirical remarks on life, but they serve the requirements of those for whom they are made. Later, however, poetry and proverbs cease to satisfy the minds of thinkers; the thoroughly-awakened intellect now calls in question the old saws and maxims, the authority of the poets, and even the validity of the institutions of society itself. After this has come to pass, the age of unconscious morality, for cultivated men at least, has ceased for ever. In the quickly ripening mind of Greece, the different stages of the progress we have described succeed each other in distinct and rapid succession. In Christendom, from a variety of causes, it was impossible that the phenomenon should be re-enacted with the same simplicity.

To give an adequate account of morality in Greece, before the birth of moral philosophy, would be nothing less than giving as far as possible an entire picture of Hellenic
life. Customs, institutions, and laws, whether local or universal; recorded actions of states or individuals; remains of song or oratory; sentiments of writers; and the works of art,—would all have to be put in evidence. One would have, in short, to do for the Grecian states from the beginning of history what Mr. Lecky\(^3\) has done for the Roman Empire. But to do this is not necessary for a comprehension of Aristotle, and it is not our present purpose,—which is only to show how moral philosophy in Greece took its rise out of the general morality. Still, we have to remember that Aristotle takes for granted the general Hellenic morality, and that this is always in the background of all that he says. We have therefore to take account of it, and if possible do it justice.

It has been well said\(^4\) that 'to suppose that the Greeks were not a highly moralised race is perhaps the strangest misconception to which religious prejudice has ever given rise. If their morality was aesthetic and not theocratic, it was none the less on that account humane and real.' 'As a necessary condition of artistic freedom, the soul of man in Greece was explicit with God or nature in what may be called an animal unity. Mankind, as sinless and simple as any other race that lives and dies upon the globe, formed a part of the natural order of the world. The sensual impulses, like the intellectual and moral, were then held void of crime and harmless. Health and good taste controlled the physical appetites of man, just as the appetites of animals are regulated by an unerring instinct. In the same way a standard of moderation determined moral virtue and intellectual excellence. But beyond this merely protective check

---

\(^3\) *History of European Morals from Augustus to Charlemagne*, by W. E. H. Lecky. (London, 1888.)

upon the passions, a noble sense of the beautiful, as that
which is balanced and restrained within limits, prevented
the Greeks of the best period from diverging into Asiatic
extravagance of pleasure. Licence was reckoned barbarous,
and the barbarians were slaves by nature, φύσει δούλοι:
Hellenes, born to be free men, took pride in temperance.
Their σεβροτύη, co-extensive as a protective virtue with the
whole of their τὸ καλὸν, was essentially Greek—the quality
beloved by Phebus, in whom was no dark place nor any flaw.'
To these remarks we may add that the Greeks did not leave
Temperance to stand alone as the guide of life, but to Tem-
perance they added Courage, and to Courage Justice, and
to Justice Wisdom. Under Courage was summed up much
of what we call 'duty,' i.e. duty to the state, a feeling which
pervaded Hellenic life. The death of the heroes of Ther-
mospylae was a typical instance of duty under the name of
Courage. Justice again was the Greek summary of 'duty
to one's neighbour,' afterwards supplemented by the concep-
tion of Equity, in which a fine and tender charity was in-
herent (see note on Eth. v. x. 1). And Wisdom, even accord-
ing to popular notions, implied calmness and elevation of
soul (see Eth. i. iv. 3). It is obvious that such a code as
this could only arise among an essentially moral and noble
people.

But a popular morality arising out of noble instincts,
whatever be its substantial merits, must still have the defect
that it can give no account of itself, and that, if asked for
such an account, it tends to base itself on inadequate
grounds. This displeases the philosophers, and hence in the
dialogues of Plato we find a disparaging picture of the
popular morality of Greece. The following are the chief
characteristics attributed to it: (1) It is shown to be based
upon the authority of texts and maxims, and these maxims
appear to be merely prudential. (2) It is shown to be apt to connect itself with a superstitious and unworthy idea of religion, such as was set forth in the mysteries, and which constituted the trade of juggling hierophants.

With regard to the former point, nothing is more marked than the unbounded reverence of the Greeks for the old national literature. Homer, Hesiod, and the Gnomic poets, constituted the educational course. Add to these the saws of the Seven Wise Men and a set of aphorisms of the same calibre, which sprang up in the sixth century, and we have before us one of the main sources of Greek views of life. It was perhaps in the age of the Pisistratidae that the formation and promulgation of this system of texts took place most actively. In the little dialogue called Hipparchus, attributed to Plato, but of uncertain authorship, we find an episode (from which the dialogue is named) recounting a fact, if not literally, at all events symbolically true. It relates that Hipparchus, the wisest of the sons of Pisistratus, wishing to educate the citizens, introduced the poems of Homer, and made Rhapsodes recite them at the Panathenae. Also, that he kept Simonides near him, and sent to fetch Anacreon of Teos. Also, that he set up obelisks along the streets and the roads, carved with sentences of wisdom, selected from various sources, or invented by himself, some of which even rivalled the 'Know thyself,' and other famous inscriptions at Delphi.

It is obvious how much the various influences here specified worked on the Athenian mind. The mouths of the people were full of these maxims, and when Socrates asked for the definition of any moral term, he was answered by a quotation from Simonides, Hesiod, or Homer. The same tendency was not confined to Athens, but was doubtless, with modifications, prevalent throughout Greece. With regard
THE MORALITY OF HOMER.

83
to the worth of the authorities above specified, a few words may be said, taking each separately. The morality in Homer is what you would expect. It is concrete, not abstract; it expresses the conception of a heroic life rather than a philosophical theory. It is mixed up with a religion which really consists in a celebration of the beauty of the world, and in a deification of the strong, bright, and brilliant qualities of human nature. It is a morality uninfluenced by a regard to a future life. It clings with intense enjoyment and love to the present world, and the state after death looms in the distance as a cold and repugnant shadow. And yet it would often hold death preferable to disgrace. The distinction between a noble and an ignoble nature is strongly marked in Homer, and yet the sense of right and wrong about particular actions seems very fluctuating. A sensuous conception of happiness and the chief good is often apparent, and there is great indistinctness about all psychological terms and conceptions. Life and mind, breath and soul, thought and sensation, seem blended or confused together. Plato's opinion of Homer was a reaction against the popular enthusiasm, and we must take Plato's expressions not as an absolute verdict, but as relative to the unthinking reverence of his countrymen. He speaks as if irritated at the wide influence exercised by a book in which there was so little philosophy.

If we consider Homer in his true light, as the product and exponent, rather than as the producer of the national modes of thought, Plato's criticisms will then appear merely as directed against the earliest and most instinctive conceptions of morality, as a protest against perpetuating these and treating them as if they were adequate for a more advanced age. Socrates says (Repub. p. 606 E), 'You will find the praisers of Homer maintaining that this poet has educated all Greece, and that with a view to the direction and cultivation
of human nature he is worthy to be taken up and learnt by heart; that in short one should frame one's whole life according to this poet. To these gentlemen,' continues Socrates, 'you should pay all respect, and concede to them that Homer was a great poet and first of the tragic writers (ποιητικότατον σίναι καὶ πρώτων τῶν τραγῳδοποιῶν); but you should hold to the conviction that poetry is only to be admitted into a state in the shape of hymns to the Gods and encomia on the good.' The point of view from which this is said is evidently that, in comparison with the vast importance of a philosophic morality, everything else is to be considered of little value and to be set aside. The faults that Plato finds with Homer in detail are, that he recommends justice by the inducements of temporal rewards (Repub. pp. 363 A, 612 B), thus turning morality into prudence; that he makes God the source of evil as well as of good (Repub. p. 379 C); that he makes God changeable (p. 381 D); that he represents the gods as capable of being bribed with offerings (p. 364 D); that he gives a gloomy picture of the soul after death, describing the future world in a way which is calculated to depress the mind and fill it with unmanly forebodings (p. 387); that he represents his heroes as yielding to excessive and ungoverned emotion, and that even his gods give way to immoderate laughter (pp. 388–9); and that instances of intemperance, both in language, and in the indulgence of the appetites, often form a part of his narrative (p. 390). In the Ethics of Aristotle the poems of Homer are frequently referred to for the sake of illustration as being a perfectly well-known literature. Thus the warning of Calypso—or, as it should have been, Circe (Eth. ii. ix. 3); the dangerous charms of Helen (ii. ix. 6); and the procedure of the Homeric Kings (iii. iii. 18); are used as figures to illustrate moral or psychological truths. Again, instances of any particular
THE MORALITY OF HESIOD. 85

phenomenon are hence cited; as for example, Diomede and Hector are cited as an instance of political courage (III. viii. 2). In other places Aristotle appeals to the words of Homer, in the same way that he does to the popular language, namely, as containing a latent philosophy in itself, and as bearing witness to the conclusions of philosophy. Thus Homer's calling Agamemnon 'shepherd of the people' (viii. xi. 1), and his physical descriptions of courage (III. viii. 10), are appealed to as containing, or testifying to, philosophical truths.

Turning from Homer to Hesiod, we discover at once a certain change or difference in spirit, and in the views that are taken of human life. In the Works and Days those that fought at Troy are represented as 'a race of demi-gods and beatified heroes,' dwelling in the 'happy isles' free from care or sorrow; whereas with Homer, these personages are merely illustrious mortals, subject to the same passions and sufferings as their descendants, and condemned at their death to the same dismal after life of Hades, so gloomily depicted in the Odyssey. Not only does this difference point to a development in the Grecian mythology, indicating the matured growth of the popular hero-worship; it also shows a feeling which characterises other parts of Hesiod, a sense that a bright period is lost, and 'that there had passed away a glory from the earth.'

The poet is no longer carried out of himself in thinking of the deeds of Achilles and Hector. He laments that he has fallen on evil days, that he lives in the last and worst of the Five Ages of the World. He finds 'all things full of

6 So in the Eudemian book (v. ix. 7) Glaucus and Diomede are referred to.
6 Cf. also the Eudemian books, vii. vi. 1, and vii. vi. 3.
8 V. 172 seqq. μηκέτ' ἐνει πέφειλον ἐπὶ πέμπτους μετέιπαι
labour. He is conscious of a Fall of Man, and accounts for this by two inconsistent episodes, the one representing mankind, through the fatal gift of Pandora, blighted at the very outset; the other describing a gradual decadence from the primeval Golden Age. Once the gods dwelt upon earth, but now even Honour that does no wrong, and Retribution that suffers no wrong (Αἰδώς καὶ Νέμεσις), the last of the Immortals, have gone and left us. Mixed up with this sad and gloomy view of the state of the world, we find indications of a religious belief which is in some respects more elevated than the theology of Homer. Hesiod represents the messengers of Zeus, thirty thousand daemons, as always pervading the earth, and watching on deeds of justice and injustice. A belief in the moral government of God is here indicated, though it is expressed in a polytheistic manner, and there is a want of confidence and trust in the divine benevolence. The gods are only just, and not benign. Hesiod's book of the Works and Days is apparently a cento, containing the elements of at least two separate poems, the one an address to the poet's brother Perses, with an appeal against his injustice; the other perhaps by a different hand, containing maxims of agriculture, and an account of the operations at different seasons. Into this part different sententious rules of conduct are interwoven, which may be rather national and Bœotian than belonging to any one

\[\text{ἀνθράψις, ἀλλ' ἢ πρὸςθεθεὶς θανεῖν, ἢ ἑπιτηγενέσθαι}\\ \text{νῦν γὰρ δὴ γένος ἐστι εἰδήθενος· οἰδὲ πον' ἥμαρ}\\ \text{παύσονται καμάτως καὶ δίζως, οἰδὲ πι}\\ \text{νόκτωρ,}\\ \text{φθείρωσον· χαλεπὰς δὲ θεοὶ δώσουσι}\\ \text{μερίμνας.}\\ \text{V. 195-199.}\\ \text{V. 250 sq.}\\ \text{τρὶς γὰρ μῆνις κλίνων ἐπὶ χθονὶ ποικιλ-}\\ \text{βοτέληρ}\\ \text{ἀθάνατοι Ζεῦς, φάλακες θετῶν ἀνθρώ-}\\ \text{πων·}\\ \text{οἴ μα φοιλάσσοντων τε δίκας καὶ σχέτλια}\\ \text{ἔργα}\\ \text{ἡερὰ ἔσσαμεν, πάντῃ φοιτοῖνες ἐκ}\\ \text{αλαν.}\\ \text{V. 48-105.}\\ \text{V. 108-171.}\\ \text{V. 48-105.}\\ \text{V. 250 sq.}\\ \text{τρὶς γὰρ μῆνις κλίνων ἐπὶ χθονὶ ποικιλ-}\\ \text{βοτέληρ}\\ \text{ἀθάνατοι Ζεῦς, φάλακες θετῶν ἀνθρώ-}\\ \text{πων·}\\ \text{οἴ μα φοιλάσσοντων τε δίκας καὶ σχέτλια}\\ \text{ἔργα}\\ \text{ἡερὰ ἔσσαμεν, πάντῃ φοιτοῖνες ἐκ}\\ \text{αλαν.}\\ \text{V. 48-105.}\\ \text{V. 250 sq.}\\ \text{τρὶς γὰρ μῆνις κλίνων ἐπὶ χθονὶ ποικιλ-}\\ \text{βοτέληρ}\\ \text{ἀθάνατοι Ζεῦς, φάλακες θετῶν ἀνθρώ-}\\ \text{πων·}\\ \text{οἴ μα φοιλάσσοντων τε δίκας καὶ σχέτλια}\\ \text{ἔργα}\\ \text{ἡερὰ ἔσσαμεν, πάντῃ φοιτοῖνες ἐκ}\\ \text{αλαν.}\\ \text{V. 48-105.}\\ \text{V. 250 sq.}\\ \text{τρὶς γὰρ μῆνις κλίνων ἐπὶ χθονὶ ποικιλ-}\\ \text{βοτέληρ}\\ \text{ἀθάνατοι Ζεῦς, φάλακες θετῶν ἀνθρώ-}\\ \text{πων·}\\ \text{οἴ μα φοιλάσσοντων τε δίκας καὶ σχέτλια}\\ \text{ἔργα}\\ \text{ἡερὰ ἔσσαμεν, πάντῃ φοιτοῖνες ἐκ}\\ \text{αλαν.}\\ \text{V. 48-105.}\\ \text{V. 250 sq.}\\ \text{τρὶς γὰρ μῆνις κλίνων ἐπὶ χθονὶ ποικιλ-}\\ \text{βοτέληρ}\\ \text{ἀθάνατοι Ζεῦς, φάλακες θετῶν ἀνθρώ-}\\ \text{πων·}\\ \text{οἴ μα φοιλάσσοντων τε δίκας καὶ σχέτλια}\\ \text{ἔργα}\\ \text{ἡερὰ ἔσσαμεν, πάντῃ φοιτοῖνες ἐκ}\\ \text{αλαν.}
particular author. The morality of Hesiod, whatever its origin, contains a fine practical view of life. It enjoins justice, energy, and above all, temperance and simplicity of living. Nothing can be finer than the saying quoted by Plato (cf. Repub. p. 466 C; Laws, p. 690 E), 'How much is the half greater than the whole! how great a blessing is there in mallows and asphodelus!' Plato finds fault with Hesiod that his is a merely prudential Ethics, or eudaemonism, that he recommends justice by the promise of temporal advantage (Repub. p. 363 A). Many of his maxims are indeed not above the level of a yeoman's morality, consisting in advice about the treatment of neighbours, servants, &c. One of these Aristotle alludes to (Eth. ix. i. 6). It is the recommendation that, even between friends, wages should be stipulated and the bargain kept. Of a different stamp, however, is that passage of Hesiod, which has been so repeatedly quoted. It contains the same figure to represent virtue and vice, which was afterwards consecrated in the mouth of Christ: 'The road to vice may easily be travelled by crowds, for it is smooth, and she dwells close at hand. But the path of virtue is steep and difficult, and the gods have ordained that only by toil can she be reached.' And this truth is rendered still deeper, by the addition, that 'He is best who acts on his own convictions, while he is second-best who acts in obedience to the counsel of others.' Aristotle cites this latter saying (Eth. i. iv. 7), which contains more than, in all probability, its author was conscious of. He

---

also quotes from Hesiod another most acute remark,\textsuperscript{15} which is to the effect that society is constructed upon a basis of competition,—that a principle of strife which makes ‘potter foe to potter’ (\textit{Ell.} \textit{viii.} i. 6), produces all honourable enterprises. It may truly be said that if Hesiod was no moral philosopher, he was a very great moralist.

Passing on now to the ‘Seven Wise Men,’ the heroes of the sixth century B.C., who are separated from Hesiod by we cannot tell how wide a chronological interval, we do not find any great advance made beyond him in their moral point of view, but rather a following out of the same direction. We find still a prudential Ethics dealing in a disjoined, but often a forcible and pregnant manner, with the various parts of life. Of the ‘Seven,’ it was well said by Dicaearchus (ap. Diog. Laert. i. 40) that ‘they were neither speculators nor philosophers (οὕτε σοφοὶς οὕτε φιλοσόφους, N.B. σοφοὶς is here used in a restricted and Aristotelian sense), but men of insight, with a turn for legislation (συνετοὺς δὲ τινας καὶ νομοθέτικους).’ They belonged to an era of political change, which was calculated to teach experience and to call forth worldly wisdom, the era of the overthrow of hereditary monarchs in Greece. All the sages were either tyrants, or legislators, or the advisers of those in power. The number seven is of later date, and probably a mere attempt at completeness. There is no agreement as to the list, but the names most generally specified are Thales, Solon, Periander, Cleobulus,
Chilon, Bias, Pittacus. Of these Thales ought to be exempted from the criticism of Dicearchus, for though many adages are attributed to him, he was no mere politician, but a deep thinker, and the first speculative philosopher of Greece. What was most distinctive in Thales does not belong to the level of thought which we are now considering. Of the rest of the Sages it was said by Anaximenes (ap. Diog. Laert. l.c.), that they 'all tried their hand at poetry.' This is characteristic of a period antecedent to the formation of anything like a prose style. Of the poems of Solon, considerable passages are preserved to us; they consist of elegies, in which the political circumstances of Solon’s lifetime are recorded, and into which sufficient general reflections on human nature are interwoven to entitle him to be called a Gnomic poet. Solon’s views of life, as far as they appear in his poetry, are characterised by a manliness which contrasts them with the soft Lydian effeminacy of Mimnermus, to one of whose sentiments Solon made answer. Mimnermus having expressed a wish for a painless life and a death at the age of sixty, Solon answers: 'Bear me no ill will for having thought on this subject better than you—alter the words and sing, “May the fate of death reach me in my eightieth year.”' In one passage of his works Solon divides human life into periods of seven years, and assigns to each its proper physical and mental occupations (Frag. 14); in another the multifarious pursuits of men are described, and their inability to command success, because fate brings good and ill to mortals, and man cannot escape from the destiny allotted to him by the gods (Fr. 5). Let us now compare these two last sentiments with that saying which is always connected with the name of Solon, and which was thought worthy of a careful examination by
Aristotle (Eth. i. x.—xi.), the saying, that 'One must look to the end,' or that 'No one can be called happy while he lives.' The story of Solon's conversation with Croesus, as given by Herodotus, is in all probability totally without historical foundation. It has the aspect of a rhetorical προσευχή, dressed up by some Sophist to illustrate the gnome of Solon. However, the beauty of the story as related by Herodotus, no one can deny. The gnome itself in its present form has this merit, that it is perhaps the first attempt to regard life as a whole. It denies the name of happiness to the pleasure or prosperity of a moment. But its fault is, as Aristotle points out, that it makes happiness purely to consist in external fortune, it implies too little faith in, and too little regard for, the internal consciousness, which after all is far the most essential element of happiness. Moreover, there is a sort of superstition manifested in this view, and in the above-quoted verses of Solon. It represents the Deity as 'envious' of human happiness. This view is elsewhere reprobated by Aristotle (Metaphys. i. ii. 13); it was a view, perhaps, natural in a period of political change and personal vicissitude, previous to the development of any philosophy which could read the permanent behind the changeable.\(^\text{16}\)

The remainder of the 'Seven' hardly need a mention in detail. The sayings attributed to them are too little connected to merit a criticism from a scientific point of view. 'The uncertainty of human things, the brevity of life, the

\(^{16}\) Mr. Symonds attributes an un-Greek origin to this and other ideas. He says (Studies of the Greek Poets, p. 417): 'The blood-justice of the Eumenides, the asceticism of Pythagoras, the purificatory rites of Empe-docles and Epimenides, the fetishistic belief in a jealous God, and the doctrine of hereditary guilt in Theognis, Herodotus, and Solon, are fragments of primitive or Asiatic superstition unharmonised with the serene element of the Hellenic spirit.'
unhappiness of the poor, the blessing of friendship, the sanctity of an oath, the force of necessity, the power of time, such are the most ordinary subjects of their gnomes, when they do not reduce themselves to the simple rules of prudence.\(^{17}\) However, some of the utterances of this era of proverbial philosophy stand conspicuous among the rest, containing a depth of meaning of which their authors could have been only half conscious. This meaning was drawn out and developed by later philosophers. The Μηδεν ἄγαν of Solon, and the Μέτρον ἄριστον of Cleobulus passed almost into something new in the μετριότης of Plato; and the Γνώθι σεαυτόν (of uncertain authorship), which was inscribed on the front of the temple at Delphi, became in the hands of Socrates in a measure the foundation of philosophy. In the Ethics of Aristotle, proverbs of this epoch, as, for instance, πολλὰς δὴ φιλίας ἀπροσηγμένα διέλυσεν (viii. vi. i), ἵσθις μὲν ἡμῶν ἀπλῶς, κ.τ.λ. (π. vii. 14), καλλιτατον τὸ δικαίοτατον κ.τ.λ. (π. vii. 14), are occasionally quoted, without any author’s name.\(^{18}\)

Two more poets may be mentioned who will serve to complete our specimens of the sixth century thought on moral subjects. These are Theognis and Simonides. They both were great authorities, as is evinced by their being so frequently cited in the writings of the ancients. They both have this in common that their verse betrays a constant reflectiveness on human life. But the tone is to some extent different. Theognis draws a darker picture than Simonides. Theognis exhibits traces of a harassed and unfortunate life, and the pressure of circumstances. Simonides, who lived through the Persian wars, writes in a more

\(^{17}\) Renouvier, Manuel de Phil. Anc. i. p. 127.

\(^{18}\) Eudemus (v. i. 16) attributes the saying, ‘Office shows the man,’ to Bias.
manly strain, as if inspired by the times and the glorious deeds of his countrymen, which he celebrated in his poetry. Theognis appears to have lived during the latter half of the sixth century. His writings are chiefly autobiographical, and consist of reflections caused by the political events of his life and of his native city Megara. He seems to have belonged to the aristocratic party and to have suffered exile, losing all his property and barely escaping with his life. His feelings of indignation are constantly expressed in his poems—in which perhaps the greatest peculiarity is, that in them the terms ἄγαθοι and ἔσθλοι are used to designate his own party, the nobles, while the commons are called κακοὶ and ἔσθλοι. It must not be supposed that these terms had hitherto no ethical meaning, though of course scientific ethical definitions had as yet never been attempted. But the words ἔσθλος and κακός occur in Hesiod in quite as distinctive a sense, as the terms 'good man,' and 'bad man,' are used in general now. It is the extreme of political partisanship expressing itself in a naive and unconscious manner which causes Theognis to identify goodness with the aristocratic classes, and badness with the commonalty of his city. We find in his writings a strange intermixture and confusion of political and ethical thoughts. In the celebrated passage which dwells on the influence of associates, he begins by saying 'You should eat and drink with those who have great power' (i.e. the nobles), 'for from the good you will learn what is good, but by mixing with the bad you will lose what reason you have.' Here an undeniable moral axiom is made to assume a political aspect, which indeed impairs its force. Plato, in the Meno,\(^\text{19}\) quotes

\(^{19}\) ὁδὸν δὲ ὅτι όὐ μόνον σοὶ τε καὶ τοῖς ἄλλοις τοῖς πολιτικοῖς τοῦτο Ἀκεί τοτὲ μὴ εἶναι βασιλεύει, τοτὲ δὲ οὐ, ἀλλὰ καὶ θαυμάζει τὸν ποιητὴν οἷοθ' ὅτι τῶν ταύτα λέγει; Μ. Ἔν τοῖς ἔπεισιν ἔγειρεν; Σ. Ἐν τοῖς ἔλεγεοις, οὐ λέγει

this passage and shows that it is contradicted by another passage of Theognis, which declares education to be of no effect. Theognis appears to have felt at different times with equal force the two points of view about education. At one time education appears to be everything, at another time, nothing.

All the expressions of Theognis, as indeed of the other Gnostic poets, seem characterised by perfect naturalness, if such a word might be used. They contain no attempt to reduce life to a theory; they flow from the heart of the individual according as he feels joy or sorrow. They exhibit no striving to be above circumstances,—rather the full, unrestrained wail of one who bitterly feels the might of circumstances. They do not seek to be logical; on the contrary, they are full of inconsistencies. In one place Theognis says (173–182), 'if one is poor it is better to die than live; one should cast oneself from some high cliff into the sea.' In another place (315–318), 'Many of the bad are rich, and the good poor, yet one would not exchange one's virtue for riches.' In the views of Theognis, as we saw before in those of Solon, there may be traced a superstitious feeling of the resistless power, and at the same time

Both of these passages of Theognis are alluded to by Aristotle in the Ethics (ix. ix. 7, x. ix. 3).
the arbitrary will of the gods. As to the standard of duty in his poems, such a conception must needs be held to have been very waver ing in him who could write (363 sq.), "Flatter your enemy, and when you have got him into your power, wreak your vengeance, and do not spare him." It is obvious that the elegiac form adopted by Theognis gave an air of universality to maxims which were only suitable to his own troubled times, and his own angry spirit. To accept the cynicism and the complaints of Byron as if of universal applicability, would be almost a parallel to what actually took place in Greece, when the verses of Theognis were quoted as an authority in morals. That this could ever have been the case, shows how great was the want of a more fixed standard, and almost justifies the sweeping attacks made by Plato upon the poets.

In the verses of Simonides of Ceos there is, as we have said, a more healthy spirit. His life (b.c. 556-467) was prosperous, and was spent in different courts, especially those of Hipparchus at Athens, of the Aleuads and Scopads in Thessaly, of Hiero at Syracuse. If Theognis be compared to Byron among the moderns, Simonides may, in some respects, be compared to Goethe, though Goethe exhibits no parallel to his spirited and even impassioned songs on the heroic incidents of the war. But the courtly demeanour of Simonides, to which he seems to have somewhat sacrificed his independence, his worldly wisdom, his moderation of views, his realistic tendencies with regard to life, and his efforts for a calm and unruffled enjoyment, remind one a little of the great German. Beyond heroism in war, Simonides does not appear to have held any exalted notions of the possibilities of virtue. There is a very interesting discussion in the Protagoras of Plato (pp. 339-346), on the meaning of some strophes in one of the Epinician
odes of Simonides. This discussion has the effect of exhibiting the critical ability of Socrates as superior to that of Protagoras. The import of the passage criticised appears to be, that, 'while absolute perfection (τετράγωνον ἄνευ ψώνον ημέραθαί) is well-nigh impossible, yet Simonides will not accept the saying of Pittacus, "it is hard to be good," —for misfortune makes a man bad and prosperity good; good is mixed with evil, and Simonides will be satisfied if a man be not utterly evil and useless;—he will give up vain and impracticable hopes, and praise and love all who do not voluntarily commit base actions.' These expressions are very characteristic of Simonides. We may remark in them (1) the criticism upon Pittacus, which shows the advance of reflective morality; (2) the point of view taken, namely, a sort of worldly moderation. Simonides complains that Pittacus has set up too high an ideal of virtue, and then proclaimed the difficulty of attaining it. Simonides proposes to substitute a more practical standard.

In thus discussing one of the gnomes of the Seven Sages, Simonides approaches in some degree to the mode of thought of the Sophists, but in later times he was taken as the representative of the old school, in contradistinction to 'young Athens,' with its sophistical ideas. Thus in the Clouds of Aristophanes (1355–1362), Strepsiades calls for one of the Scolia of Simonides, while his son treats them with contempt. A sort of sententious wisdom appears to have been aimed at by this courtly poet; a specimen of this is given in the Republic of Plato (p. 331 E), where justice is defined, according to Simonides, to consist in 'paying one's debts.' It is easy to show this definition inadequate, and yet it was a beginning. The quickly developing mind of Greece could not long remain in that stage to which Simonides had attained; it was imperatively necessary that it should break
away, and by force of questioning, obtain a more scientific view. We might say of the aphoristic morality of the poets and sages of the sixth century B.C. what Aristotle says of the early philosophers, namely, that 'without being skilled boxers, they sometimes give a good blow' (Metaphysics, i. iv. 4).

During the fifth century B.C. poetry in Greece continued to represent, or contribute to, the popular beliefs in morals, while as yet moral philosophy was not. The great poetical figures of this time were of course Pindar (522-443, B.C.), and the Attic Tragedians, who succeeded each other at brief intervals, since Æschylus gained his first prize in 484, B.C., Sophocles his first in 468, B.C., Euripides his first in 441, B.C. Of Pindar, Mr. Symonds well says: 'The whole of his poetry is impregnated with a lively sense of the divine in the world. Accepting the religious traditions of his ancestors with simple faith, he adds more of spiritual severity and of mystical morality than we find in Homer. Yet he is not superstitious or credulous. He can afford to criticise the myths like Xenophanes and Plato, refusing to believe that a blessed god could be a glutton.' In Pindar indeed we see the fine flower of Hellenic religion, free from subservience to creeds and ceremonies, capable of extracting sublime morality from mythical legends, and adding to the old joyousness of the Homeric faith a deeper and more awful perception of superhuman mysteries. The philosophical scepticism which in Greece, after the age of Pericles, corroded both the fabric of mythology and the indistinct doctrines of theological monotheism, had not yet begun to act. Pindar held indeed to the Hellenic religion, but he vivified and elevated it by the introduction of an element drawn

---

29 The reference here is to Olymp. i.
from Orphic or Pythagorean sources. His pictures of the rewards and punishments beyond the grave form a great advance upon the creed of both Homer and Hesiod. The Hades of Homer was a gloomy negation, and the 'happy isles' of Hesiod were peopled by the heroes of Troy. But Pindar connects the torments or blessings of the soul in a future state with its moral actions upon earth; and (introducing the oriental conception of Metempsychosis) he opens Paradise to those souls which during three successive lives have kept themselves pure from crime. It can hardly be doubted that the lyric strains of Pindar, embodying this doctrine, did much to influence the thought of Plato and to produce his sublime conceptions (set forth in Phædo, Gorgias, and Republic) of a future life of the soul dependent on the moral purity and the philosophic wisdom attained by it in this world. And if so, Pindar has played an important part in the history of Eschatology21 in Europe. His views of the present life are distinguished by a certain God-fearing sobriety. While celebrating the wealth, the strenuous effort, and the good fortune (δυναμις, ἀρετη, εὐτυχις) of the Victors of the games, he does not fail to admonish them of the

21 The following is Mr. Symonds' prose translation of Pindar Olymp. ii.: 'Among the dead, sinful souls at once pay penalty, and the crimes done in this realm of Zeus are judged beneath the earth by one who gives sentence under dire necessity. But the good, enjoying perpetual sunlight equally by night and day, receive a life more free from woe than this of ours; they trouble not the earth with strength of hand, nor the water of the sea for scanty sustenance; but, with the honoured of the gods, all they who delighted in the keeping of their oath pass a tearless age; the others suffer woe on which no eye can bear to look. Those who have thrice endured on either side the grave to keep their spirits wholly free from crime journey on the road of Zeus to the tower of Cronos: where round the islands blow breezes ocean-borne; and flowers of gold burn—some on the land from radiant trees, and others the wave feeds; with necklaces whereof they twine their heads and brows, in the just decrees of Rhadamanthus, whose father Cronos has for a perpetual colleague he who is spouse of Rhea throned above all gods,'
fleeting character of life and prosperity, and to preach moderation and continence (σικνόσμια, συφρασίνη, μηδὲν ἄγαν). He chooses for himself a middle status in society and deprecates the lot of kings (Pyth. xi. 50). The following is his conception of a sumnum bonum upon earth (Pyth. x. 22): ‘That man is happy and song-worthy by the skilled, who, victorious by might of hand or vigour of foot, achieves the greatest prizes with daring and with strength; and who in lifetime sees his son, while yet a boy, crowned happily with Pythian wreaths. The brazen heaven, it is true, is inaccessible to him; but whatsoever joys we race of mortals touch, he reaches to the farthest voyage.’

The Attic Dramatists are the exponents of the spirit of the Athenian people quickened by the sense of their triumphant delivery from the great national peril of the Persian invasions. They represent successively the rapidly succeeding phases of the Athenian mind. Their great theme, the fundamental idea of their tragedies, as indeed of the Greek legends on which they were based, was Nemesis—Retribution either for crime committed, or for insolent prosperity and pride of life.

Mr. Symonds (Studies of the Greek Poets, pp. 190–205) has well analysed the different forms of this idea as it appears in Æschylus, Sophocles, and Euripides. In Æschylus Retribution (δράσαι τινι παθείν τρεῖρον μῆθος) is the revelation of an offended Deity; in Sophocles it is rather the exhibition of a moral law: our attention is drawn to the human character of the guilty man, and we see how he brings terrible consequences on himself. ‘In Euripides it degenerates into something more akin to a sense of vicissitudes; it becomes more sentimental—less a religious or moral principle than a phenomenon inspiring fear and pity.’ A similar progress with regard to all moral questions may be traced in the
dramatists:—in Ἀeschylus morality is identified with religion; in Sophocles it is a noble intuitive sense of right and wrong; in Euripides it is a casuistical and sophisticated reasoning upon all moral questions. Euripides does not belong to the unconscious period of morals; the influence of law-courts, rhetoricians, and sophists upon the Athenian mind has been too rapidly disintegrating to admit of this. Even in Sophocles we see the beginnings of casuistry in the collision brought out in the Antigone between a decree of the state and the eternal sense of right and wrong (οὐ γάρ τι νῦν τε κάθετι ἀλλὰ ἄει πότε ἐγώ ταῦτα) in the human mind. But this collision is not worked out by Sophocles, as it would have been by Euripides, in a sophistical spirit, so as to produce scepticism in the validity of both the conflicting authorities. The impression which is left is rather that that most tragical position of all has been produced, where both parties are justifiable and are in the right. But, doubtless, the Antigone of Sophocles was partly a result of, and partly a contribution to, these discussions of the opposition between Law and Nature which played so conspicuous a part in the sophistical period of Hellenic thought.

Besides adherence to proverbs and saws from the poets, there was another element specified by Plato in his picture of the popular morality of Greece, which we have hitherto left unnoticed, namely, the tendency to accept unworthy conceptions of religion, such as would essentially interfere with the purity and absoluteness of any ideas of right and wrong. Not only was there prevalent a belief in the enviousness and Nemesis of the Deity, such as forms the constant theme of the reflections of Herodotus; not only was there a superstitious hankering after signs and oracles, which tended to disturb the manly calmness of the mind; not only was there a mean and anthropomorphic conception of God, which
reduced religion to hero-worship, and really stood quite beside, and distinct from, all morality; but also there was a direct tampering with morality itself on the part of certain religious hierophants. These were the professors of mysteries, respecting whom Adeimantus is made to say in the Republic of Plato (p. 364 B sq.), 'The most astonishing theories of all are those which you shall hear about the gods and about virtue—that the gods themselves have actually allotted to many good men misfortunes and an evil life, and to the bad a directly opposite lot. On the other hand, seers and jugglers come to the doors of the rich, and persuade them that they have a power given them by the gods of expiating by offerings and charms all offences, whether committed by a man's self or his ancestors, and this quite pleasantly—merely by holding a feast; and if any one wants to be revenged on an enemy, they will, for a trifling cost, do the fellow a harm (they say) whether he be a good man or a bad man—by forcing the gods with their incantations and spells to serve them. They cite the poets as authorities for their assertions, to prove that the path of vice is easy, and that of virtue rugged and difficult. They prove from Homer that the gods are not inexorable, but may be turned by the prayers and offerings of men. And they adduce a whole swarm of the books of Museus and Orpheus, the kinsmen (as they say) of Selene and of the Muses, according to which they perform their rites, and persuade not only individuals, but whole states, that actually by means of feasting and pleasure, expiations and releases may be provided both for the living and also for the dead, which will free men from all the penalties of the future life; but that for any one not using their rites a most horrible fate remains.'

Of the Orphic mysteries here alluded to, and of the other mysteries in general, it will not be necessary for our present
purpose to say much. They appear to have originally possessed an oriental character, and to have been in themselves not without a deep meaning. They were a protest against Grecian anthropomorphism. They seem to have contained the assertion of two deep ideas, the immortality of the soul, and the impurity of sin, which required expiation. That they had become debased before becoming popular, we learn from this account of Plato. A perverted religion that offered 'masses for the soul,' and a preference to the rich over the poor—joined with the traditional, unreflecting, and prudential morality that was rife in Greece—produced a state of feeling that made Plato say in the person of Adeimantus—

'The only hope is, either if a person have a sort of inspiration of natural goodness, or obtain a scientific apprehension of the absolute difference between right and wrong.' (πλὴν ἐν τις θεία φύσει δυσχεραίνων τὸ ἁθικὲν ἡ ἐπιστήμην λαβὼν ἀπέχεται αὐτῶ. Repub. p. 366 C.)

The relation of the Ethics of Aristotle to the popular morality was, as we have said, rather different from that of Plato. Aristotle considers the opinion of the many worth consideration, as well as that of the philosophers. He constantly appeals to common language in support of his theories, and common tenets he thinks worthy of either refutation or establishment. There are certain points of view with regard to morals, which are not exactly philosophical in Plato's sense of the word, but which have a sort of philosophical character, while, at the same time, they were common property; and these are made use of by Aristotle. Such are especially the lists and divisions of good, which seem to have been much discussed in Greece; as, for instance, the threefold division into goods of the mind, the body, and external (Eth. i. viii. 2); again, the division into the admirable (τίμια) and the praiseworthy (Eth. i. xii. 1). One list of goods, not mentioned by
Aristotle, pretended to give them in their order of excellence, thus,—wisdom, health, beauty, wealth. The conception of a chief good seems to have been vaguely present before people's minds, and this no doubt determined primarily the form of the question of Aristotle's *Ethics*. This was the natural question for a Greek system of Ethics; both Plato and Aristotle tell us how wavering and inconsistent were the answers that common minds were able to give to it, when in an utterly unsystematic way it was presented to them (*Repulb*. p. 505 B; *Ethics*, i. iv. 2).

Before taking leave of this period of unphilosophic morals, we must ask—How fared the philosophers in it? The author of the *Magna Moralia*, as we have seen, attributed to Pythagoras certain mathematical formulae for expressing ethical conceptions. That the Pythagoreans adopted these we know from other sources, but at how late a date it seems difficult to say,22—perhaps not before the time of Philolaus. Of the other philosophers it may be said generally that ethical subjects did not form part of their philosophy, they made no attempt to systematise the phenomena of human society and human action. And yet they had deep thoughts on life and stood apart from other men. This standing apart was indeed their characteristic attitude. Philosophic isolation was the

---

22 A quantity of spurious Pythagorean fragments have come down to us. Patricius, in his *Discussiones Peripateticae* (Vol. II. Book VII.), quotes these to prove that Aristotle plagiarised from the Pythagoreans. If the fragments were genuine, they would indeed prove wholesale plagiarism. But they are plainly mere translations of Aristotle into Doric Greek. The following is attributed to Archytas: ὁδὸν ἐκεῖνον ἐστὶν ἐκδαιμονία ἄλλῃ ἔχουσι ἀρετῆς ἐν ἐνόχεια. Able as the work of Patricius is, it labours under the disadvantages of his era, criticism having as yet hardly an existence. As a specimen of his judgment—he calls it 'a lie' on the part of Aristotle to attribute the authorship of the Ideas to Plato, since this doctrine had been known before Plato, to the Pythagoreans, Orpheus, the Chaldeans, and the Egyptians! His authorities are such works as *Iamblichus, Paulus*, &c.
chief result of their reflections upon the world. The same thing, as M. Renouvier says, expresses itself in the symbolic tears of Heraclitus and the symbolic laughter of Democritus—a doctrine of despair and of contempt. A deep feeling pervades the utterances of Heraclitus, but it is a feeling of the insignificance of man. 'The wisest man,' he says, 'is to Zeus as an ape is to man.' In the ceaseless eddy of the creation and destruction of worlds, which he pictured to himself, individual life must have seemed as the motes in the sunbeam. He was called ὑλοφόρος, from his philosophic exclusiveness. Democritus, though a pre-Socratic philosopher, yet lived into and was influenced by the thought of the Sophistic era. He seems to have considered the human will as something apart in the world, and thus while subjecting the atoms to the power of necessity, he is reported to have said, 'Man is only a half-slave of necessity.' The chief good he considered to be Ἀταραξία or an unruffled serenity of mind. In a similar spirit Anaxagoras affirmed that he considered happiness something different from what most men supposed, and that they would be astonished to hear his conception of it' (cf. Eth. x. viii. 11), meaning that it consisted not in material advantages, but in wisdom and philosophy. The moral doctrines of these early philosophers come before us in general in the form of aphorisms, they seem to belong rather to the personal character of the men than to the result of their systems.

II. The unconscious period of morality in Greece was succeeded by an interval of sceptical thought upon moral subjects. This was the era (commencing about 450 B.C.) in connection with which the word 'sophistical' was first used; it was, in short, the era of the famous 'Sophists' of the fifth and fourth centuries. Who and what were these 'Sophists' (whose name became a byword, and was converted into an
adjective with so invidious a connotation)? is a question of much interest in itself; and the interest has been increased since Grote, 24 years ago, in the 67th chapter of his History of Greece, undertook to vindicate the Sophists from the aspersions which had up to that date rested upon them, and to show that the word 'sophistical' in its modern sense is a fossilised injustice, being merely the expression of Plato's prejudice against a respectable set of men. Grote's bold paradox naturally excited opposition in various quarters, and the first edition of the present Essay (1857) contained a sort of protest against it. Time and reflection and the remarks of various scholars who have taken part in the controversy, would seem to necessitate the modification of that protest,—not to the extent of acknowledging that 'the main substance of Grote's conclusions' are 'as clear and certain as anything of the kind can possibly be,'—but to the extent of acknowledging that Grote has done valuable service in mooting his views, supported as they are by his usual rich learning and his strong manly sense. The 'main substance of Grote's conclusions' would surely be this:—that Plato was unjust in attributing 'sophistry' to the Greek Sophists. This plea, as urged in favour of the Sophists and against Plato, we are still unable to accept. Grote's other and, as we should call them, secondary conclusions, e.g. that the Sophists were not a sect but a profession; that among their ranks honourable men were included; that, as the educated of youth, they did much to promote the civilisation of Greece and the development of certain arts and sciences; and that many of the German commentators and historians of philosophy have been too hasty and sweeping in their condemnation of them,—we willingly accept as capable of absolute demonstration. But

23 This is the opinion of Mr. H. Sidgwick, expressed in the Journal of Philology, vol. iv. p. 288.
the question is whether Grote, after justly exposing and refuting certain ill-considered statements of modern writers, has not gone too far, in his zeal of advocacy, in attempting to completely turn the tables on some of the greatest of the ancients. If there was no sophistry (in the now accepted sense of the word) properly chargeable on the Sophists, then one of the chief lessons which Plato thought that he had to teach the world—a lesson which, if it be a true one, is applicable not only to the popular teachers of the fifth century in Greece, but also to the analogous teachers of all ages—would fall to the ground as unmeaning. What we have to do is to see what Plato and Aristotle and others of the ancients really said, and to endeavour to interpret and criticise their sayings rightly.

The question begins with the history of a word. At first the word σοφιστής was used in an indeterminate sense to denote any one 'who by profession practised or exhibited some kind of wisdom or cleverness;' thus it was applicable to philosopher, artist, musician, and even poet. 21 Aeschylus makes Hermes apply the term with sarcasm to Prometheus (P. V. 944), but the sneer consists in addressing Prometheus as σὲ τὸν σοφιστήν—'you the craftsman'—when in so helpless a situation. In the same play, v. 62, it occurs without any such irony:

ína

μάθη σοφιστής ὅν Δίος νοθέατος,

—'duller in his art than Zeus.' In one of the fragments of Aeschylus σοφιστής is applied to Orpheus, denoting 'musician,' or 'master.'

Herodotus (1. 29) mentions that Solon ἀλλοι τε οἱ πάντες

21 Cf. Diogenes Laertius, i. 12: Οἱ δὲ σοφι καὶ σοφισταὶ ἐκλογοῦντο. Καὶ οὐ μόνον, ἀλλὰ καὶ οἱ ποιηταὶ σοφισταὶ.
In the *Clouds* of Aristophanes (acted 423 B.C.), the word *σοφιστής* appears for the first time in an invidious sense, and the invidiousness consists in an association attached to it partly of over-subtle, vapourish, speculation, partly of charlatanery. Thus (v. 331) the clouds are said to be ‘the maintainers of many such professors’—soothsayers from Thurium, quacksalvers, idle fellows with long hair and rings to their finger-tips,—where it is clear that the term ‘Sophist,’ though now bearing a shade of contempt, has not yet reached the limited Platonic sense of ‘paid instructor in rhetoric and philosophy.’ In v. 361, Socrates and Prodicus are spoken of as the chief amongst the crew of ‘transcendental Sophists (τῶν μὲν μετεωροσοφιστῶν).’ In v. 1111 sq. we see expressed a popular opinion of the Sophist, as a pale and attenuated student (*σοφιστήν—ὀχρόν—καὶ κακοδαίμονα*). And in v. 1306 sq. the term is applied to Strepsiades, in the sense of ‘trickster,’ in allusion to his cheating of his creditors. In Aristophanes, then, the word ‘Sophist’ is still indeterminate; it has become uncomplimentary, but only as conveying the popular feeling about the profession of out-of-the-way accomplishments, just
as the term 'professor' is sometimes used in a slightly sneering way in modern times. Aristophanes has evidently no consciousness of any particular class of Sophists who were the philosophical antagonists of Socrates. He couples Socrates and Prodicus together as among the most 'speculative sophists' of the day. He speaks quite ab extra, knowing nothing of the interior of philosophical circles, and only represents a general popular suspicion of all philosophers or 'professors,' not troubling himself to make distinctions between them.

Thucydides writing at the end of the fifth century B.C. uses the word σοφισταὶ in a sense nearer to that of Plato than Aristophanes had done, to denote those professional orators who made displays of rhetoric (ἐπίδειξεις) before a set audience.²⁶

By Xenophon (born about 431 B.C.) the word is used both in its indeterminate and in its limited sense. In Memora-

bilia, IV. ii. 1, he speaks of γράμματα πολλὰ ποιητῶν τε καὶ σοφιστῶν τῶν εὐδοκιμοτάτων ('the most famous sages'), in the same sense in which (Ib., I. vi. 14) he speaks of τῶν θησαύρων τῶν πάλαι σοφῶν ἀνδρῶν, οδύς ἔκεινοι κατέληπτον ἐν βιβλίοις γράφαντες. In Synopedia he speaks of a 'sophist' to whom he attributes the most elevated and noble character. Cyrus is represented in the fiction as asking Tigranes, son of the chief of Armenia, what had become of 'the sophist,' with whom on former occasions he had seen him associating? 'He is no more,' said Tigranes, 'for my father here put him to death.' 'What crime,' asked Cyrus, 'did he find him committing?' 'He said that he corrupted me,' answered Tigranes; 'and yet, Cyrus, so noble and excellent a man was he, that when he was going to die, he sent for me

²⁶Bell. Pelo. iii. 38: ἀπλῶς τε. θεταῖς ὑπὸτε καθημένους μᾶλλον ἀ

ἀκοὴ ηὐθυρὴ ἡσυχῶν καὶ σοφιστῶν περὶ πόλεως βουλευόμενοι.
and told me not to bear my father the least ill-will for putting him to death, because he was not doing it out of malice, but out of ignorance, and whatever faults men commit through ignorance ought to be considered involuntary.' Whether 'sophist' here is to be taken in the limited sense of paid instructor, or merely in the more general sense of 'philosopher,' this remarkable passage shows that at the time when Xenophon wrote his *Cyropedia*, he knew nothing of an absolute antagonism and contrast between Socrates and 'the Sophists,' else he would not have drawn a picture of 'a sophist' suffering the same fate as Socrates, martyr of the same ignorant prejudice, and expressing sentiments worthy of the most noble mood of Socrates. In *Mem.* i. vi. 1, Xenophon speaks of 'Ἀντιφώντα τὸν σοφιστήν.' It is uncertain whether Antiphon of Rhamnus, the master of Thucydides, is here meant. Whoever is the person alluded to, he is described as taunting Socrates on his bare feet and scant clothing—the same in winter as in summer—on his spare diet and on the general wretchedness of his mode of life. 'If philosophy,' he proceeded, 'be your mistress, you get from her a worse maintenance than any slave would put up with from his master. It is all because you will not take money—money that cheers the recipient, and enables him to live in a more pleasant and gentlemanlike way. You act as if your instructions had no value, else why should you give them for nothing.' Socrates replies that there are two things, which to sell is prostitution—namely, personal beauty and wisdom. 'Those who sell their wisdom for money to any that will buy, men call "Sophista," or, as it were, a sort of male demi-monde; 27 whereas whoso, by imparting knowledge to another whom he sees well qualified to learn, binds that

---

27 Τὴν σοφιστὴν ἄσαφτας τοῦ μὲν σοφιστήν, δεινὸν πόρνων Ἀποκαλοῦν τῇ διαλείψας, άργυρίῳ τῷ θεουλομένῳ πωλοῦντας, συν. κ.τ.λ. § 13.
other to himself as a friend, does what is befitting to a good citizen and a gentleman.' Here the name 'sophist' is used in its distinctly limited sense to denote a teacher who takes pay, and it is also implied that, on this very account, the name is considered to convey a certain amount of reproach with it.

At the end of Xenophon's treatise on Hunting (Cynegeticus, c. xiii.), there appears a moral peroration, in which the writer preaches a sermon on the excellence of the practice of hunting as preparing a man to serve his country. Then he goes on to the worth of toilsome pursuits in general, and though virtue is toilsome, says that mankind would not shun the pursuit of her if they could only see in bodily form how beautiful she is. This train of thought reminds him of 'the so-called Sophists' of his time. He says, 'They pretend to teach virtue, but their teaching is a mere pretence.' He has never seen any one made a good man by the teaching of a Sophist. He says, 'Many beside me find fault with the Sophists, and not with the philosophers, because the former are subtle in words and not in thoughts.' 'They seek only reputation and gain, and do not, like the philosophers, teach with a disinterested spirit.'

This passage, if it could be accepted as independent

---

28 Θεαμάζοντες δὲ τῶν σοφιστῶν καλούμενον ὃτι φασὶ μὲν ἔστιν ἄρετὴν ἅγιον οὐ πολλὰ τοῖς νέοις, ἔγνωσι δὲ ὡς τοὺς τοῦτούς ὡς αὐτοὺς ἀδικίαν ἄνθρωπον που ἴσως· τοῖς νέοις δὲν σοφισταῖς ἄγαθον ἐποίησαν, ὡς τὰ γράμματα παρέχονται ἐξ ἐν χρῆ ἀδανθοῦ γέγονον, ὡς ἔργα καὶ ἕκαστον σοφιστὴν κληθμένη, δὲ ἔτοιμον δοειδος παρά γε τοῖς εὐ φρονοῦσι, τὰ μὲν οὖν τῶν σοφιστῶν παραγγέλματα παραιτοῦντες φιλόσοφαι, τὰ δὲ τῶν φιλόσοφοις ἀνθυμίζομα μὴ ἄντιμαρ, οἱ μὲν γὰρ σοφισταῖς πλοῦσιν καὶ λόγον θηρίων, οἱ δὲ φιλό-

29 Ψήνοντες δὲ καὶ ἄλλοι πολλὰ τοῖς νέοις τοῖς σοφιστάσι καὶ οὐ τοῖς φιλόσοφοις, ὡς τοῖς ἄνθρωποι σοφίζονται καὶ οὐκ οἷς τοῖς χαράσσει.
testimony, would go so far to prove that the strongest terms of censure ever used by either Plato or Aristotle, were only a reflection of the general opinion of enlightened men in Greece, when contrasting 'Sophists' with 'philosophers.' But the passage is out of harmony with that quoted above from the *Cyropaedia*; and again it is like an afterthought unnecessarily appended to the treatise *On Hunting*. We know that Xenophon, who was not born much before Plato, lived to a great age; and it seems reasonable to conjecture that, at some time or other—after reading Plato's *Sophistes*, in which the sophist is defined as one who hunts after rich young men—he added on this frigid peroration to his lively and technical discourse on hunting. If so, it is merely a coarse echo of Plato, just as the *Symposium* of Xenophon looks like a poor copy of Plato's *Symposium*. All that can be said, in that case, is that Xenophon, who is not in the least a discriminating or trustworthy authority on philosophical matters, endorses the charge, by whomsoever made, against the Sophists (as a recognised class of teachers)—that their ethical teaching was hollow and rhetorical, and their whole spirit mercenary and self-seeking. And he appears also to indicate that enlightened public opinion was in the same direction.

The next testimony we have to cite is that of Isocrates, who was born 436 B.C., and was thus seven years older than Plato. He seems to have been to some extent the pupil of Socrates, but he maintained himself afterwards by keeping a school of rhetoric, which was attended by the most distinguished pupils. His direction was entirely practical, as is evinced by frequent passages of his works, in which he expresses contempt or dislike of the speculative spirit. On the one hand he uses the term 'Sophist' in its received meaning of professional teacher, and on the other hand he is in the
habit of employing it loosely and vaguely to apply to literati or philosophers in general. Isocrates was totally incapable of appreciating the philosophic spirit, and from his point of view, which regarded practical success as alone worth having, he ignored altogether any distinction between the philosopher and the Sophist. His aversion to speculation vents itself in a confused and indiscriminate carping at the literary profession and the philosophers. His oration κατὰ τῶν Σοφιστῶν, which is fragmentary, contains an attack on ‘those who undertake to teach.’ He ridicules the magnitude of their promises,—their imposture in offering to impart to youths virtue and the art of attaining happiness; and the absurdity of their demanding, in return for those inestimable advantages, the paltry sum of three or four minae. This class of teachers he calls the disputants (οἱ περὶ τὰς ἐριδὰς διατριβοῦτες); from them he passes on to censure those that offer to impart political discourses, being all the while themselves incompetent, and speaking as if such discourses had no relation to particular occasions, but could, like the art of writing, be acquired once for all. The reproaches he makes use of are some of them identical with those to be found in the dialogues of Plato, as, for instance, that the Sophists cannot trust those very pupils to whom they are undertaking to teach justice. He laughs at their affecting to despise wealth, and says that their mean condition, and adherence to mere verbal distinctions, has made many prefer to remain unscientific, as despising such a kind of exercise.

What Isocrates upholds, however, in contrast to this is not a deeper philosophy, but a more polished rhetoric, and he names mental qualifications for it, which are precisely such as Plato thought most undesirable. Ταῦτα δὲ πολλὴς ἐπιμελείας δεῖται καὶ ψυχῆς ἀνθρικῆς καὶ δοξαστικῆς ἐργον ἔλλατι. In another passage (Philippus, § 12), Isocrates uses
the term Sophist with what seems to be an undeniable allusion to Plato's *Republic* and *Laws*. Speaking of the futility of abstract political speculations, he says, ἀλλὰ ὀμοίως οἱ ποιοῦσι τῶν λόγων ἀκυροὶ τυχαίαις ὀντες τῶν νόμων καὶ ταῖς πολιτείαις ταῖς ὑπὸ τῶν σοφιστῶν γεγραμμέναις. In his oration, *De Permutatione* (§ 235), he says that Solon, through his attention to rhetoric, 'came to be called one of the Seven Sophists, and took the appellation now dishonoured and censured by you,' and in § 313, he affirms that Solon was the first of the Athenians to be called a Sophist.\(^{31}\) This last statement is at variance with that of Plato, who makes Protagoras to have been the first who accepted the appellation 'Sophist.' The discrepancy depends on the ambiguity and change of meaning in the term. Solon may have been the first Athenian who was called Sophist, in the old sense of the word, *i.e.* philosopher.\(^{32}\) Protagoras was the first who adopted the name in its later sense, *i.e.* professional teacher of philosophy.

We see, then, that the word 'Sophist,' having first had a merely general signification, denoting 'philosopher,' 'man of letters,' 'artist,' &c., acquired a special meaning after the middle of the fifth century, as the designation of a particular class of teachers. And then men began to talk of 'the Sophists,'—referring to this class. But the word retained both its significations, even in the pages of the same author. The word in its earlier sense might be applied in a neutral, or in a sneering, way. Thus Xenophon describes 'a Sophist,' who was a most exalted character; and on the other hand,

---

\(^{31}\) Οἶκοιν ἐνὶ γε τῶν προγόνων ὠδίων ἔχειν, ἀλλὰ τοὺς καλομένους Σοφιστὰς ἐθαλάμαζον καὶ τοὺς συνώντας αὐτοῖς ἐξίπλονοι. Σύλλωκα μὲν γὰρ, τῶν πρῶτων τῶν τολμῶν λαμβάνα τὴν ἐκπαιδευματικὴν προστάσιν ἦλθον τὴν πόλεως ἐναί.

\(^{32}\) The allusion here may be merely to that passage of Herodotus (i. 29) quoted above, where it was said that 'Solon and all the other sophists of the day' came to Sardis.
Isocrates sneers at 'the Republics and Laws composed by Sophists,' thus applying the name in a general but uncomplimentary sense to Plato himself. But it may safely be said that for 150 years after 450 B.C. it is rare to find the word 'Sophist' used without some shade of disparagement. Aristophanes satirises philosophers generally under this name; Thucydides opposes Sophists, as deliverers of rhetorical discourses, to statesmen in earnest about some question; Xenophon perhaps copies Plato, but also as a soldier and a gentleman he expresses his contempt for a class of paid teachers, who had nothing but verbiage to impart; Isocrates speaks of the class with the bitterness of a rival teacher.

If the 'Sophists' of the fifth century made money out of their contemporaries, they seem, on the other hand, to have been hardly used by them (whether deservedly or not) in respect of reputation. We have hitherto looked at 'the Sophists' from their external side, as they appeared to contemporary writers. Passing on now to Plato, we shall first be able to gain much additional information from him as to this same external side of the Grecian Sophists; afterwards we shall learn from him to appreciate the inner essence of that spirit which he calls ἡ σοφίατική, and which may undoubtedly be looked upon as an actual phase of human thought, by no means confined to the age of Socrates.

It has been a common mistake to understand, under the name of 'the Sophists,' certain particular individuals, Protagoras, Gorgias, Prodicus, Hippias, Polus, Thrasymachus, and one or two others, who figure in the dialogues of Plato. Enough has been said to show that in earlier writers the name is never used to indicate a sect in philosophy, and it is equally true that in Plato it is the name of a profession, not of a sect; nor is it ever restricted by him to the above-mentioned individuals, who are merely eminent members of
what was indeed a very wide-spread profession. In the *Meno*, p. 91 E, Socrates is made to speak as if Protagoras was not by any means even the first of the Sophists, καὶ οὐ μόνον Πρωταγόρας, ἀλλὰ καὶ ἄλλοι πάμπολλοι, οἱ μὲν πρώτερον γεγονότες ἐκείνου, οἱ δὲ καὶ νῦν ἐτὶ διητείς. And by a still more remarkable mode of speaking, in the *Ethics* of Aristotle ix. i. 5–7, Protagoras appears to be in a sort of way contrasted with the Sophists.  

It is true that Plato represents Protagoras to have been the first to assume openly the name of Sophist (cf. *Protag*. p. 317), but he also gives a humorous picture in the same dialogue, p. 314 D, of the crowds of Sophists flocking to the house of Callias, so that the porter, mistaking Socrates and Hippocrates for members of the profession, would scarcely open the door to them.  

Within the house they find a conclave of persons, 'most of them foreigners whom Protagoras, like another Orpheus, had drawn after him from their own cities'—amongst others, 'Antimenes the Mendesian, the most famous of the pupils of Protagoras, who was learning with professional objects, meaning to be a Sophist' (ἐν τέχνῃ μαθάνει, ὡς σοφίτης ἑσόμενος). Protagoras takes great merit to himself for openly declaring his art, for he confesses 'that a certain amount of envy attaches to it; that, going about drawing away youths from their kindred and connexions under the promise of making them better if they associated with him—he was likely to be assailed with hostility; old as he is, however, no

---

23 'Ο γὰρ πρωταγόρας οὐκ ἐπεξετέλεσεν ἐκεῖνον. Ὁσεὶ φασὶ καὶ Πρωταγόρας των εἶναι, διὸ τὸ γὰρ διδάξειν ἄδεητα, τιμᾶσι τὸν μαθέαν ἐκείνον τὸν δοκεῖ δὲμα ἑπὶ ἑπτάπειν, καὶ ἐκείνους τοὺς ἄλλους. —Οἱ δὲ προσβάλλοντες τὸ ἀργήφης, αὐτὰ μὴν προσέλθεται ὡς ἐξαίρετα, διὸ τὸ μὲν ἐν ἀμφιβαλλόντι, αλλὰ
harm has ever come to him on account of his candour.' (pp. 316–317.)

It is interesting to trace in Plato the indications of general opinion about the Sophists. In spite of their great success he represents them to have been held in dislike and suspicion by persons of honour, who at the same time made no pretensions to philosophy. This feeling is instinctively expressed by the young Hippocrates (Protag. p. 312 A), who being asked whether he is going to Protagoras in order himself to become a Sophist, confesses that he should consider this a great disgrace. By Callicles, in the Gorgias (p. 519 E), a sweeping contempt is expressed for 'those who profess to teach virtue;' Socrates asks, 'Is it not absurd in them to find fault with the conduct of those whom they have undertaken to make virtuous?' Callicles replies, 'Of course it is; but why should you speak about a set of men who are absolutely worthless?' Socrates answers, 'Because I find the procedure of the Sophist and the Rhetorician identically the same.' In the Meno the question being, Is virtue teachable? Socrates argues that if it be so, there must be teachers of it, and inquires of Anytus, 'To whom shall we send Meno to learn virtue from? Whether to the Sophists?' Anytus repudiates the idea, since 'these corrupt all who come near them.'

---

23 Ἐν δὲ, ἵνα δὲ γε, πρὸς τίνις, οἷς ἐν ἀλεξίναις οἷς τοῖς Ἐλληνσι ἀπῶλεν σοφίστήν πορέχων; Ἡ τίνι Δία, ἢ ὅσορας, εἴτε ἢ διανοοῦμαι χρή λέγων. This expression is too strong to be explained away, as Grote proposes, by saying that it is only analogous to an English boy's being unwilling to have it thought that, when grown up, he was going to be a schoolmaster.

24 P. 91 B, ἐκατει παρὰ τίς ἀν πέμποντες αὐτὸν ἄρθως πέμπομε. ἢ δὴ τίς λέγων δὴ κατὰ τῶν ἄρτων λόγων, ὦ τά παρὰ τοῦτον τῶν ἐπιχρησμόνων ἄρτης διδασκάλους οἶνου καὶ ἀποφθέγματα αὐτῶν κοινῶς τῶν Ἐλλήνων τῆς βουλομένης μαθάσων, μεσθον τοῦτον ταξιμένους τα καὶ πραπτομένους. ΑΝ. Καὶ τίς λέγει τοῦτον, ἢ ὅσορας; ΑΛ. Οὐδ' ἄρκειν καί σὺ δὴ ὁ οἶνος ὁ οἷς οἱ ἀθέτηντοι καλοῦσι σοφιστές.
urges, 'How is it possible this should be true of the Sophists; — a cobbler who professed to mend shoes but made them worse, would be found out in less than thirty days, how then could Protagoras have remained undetected and maintained so great a reputation and made so great a fortune, deceiving the whole of Greece for more than forty years? At all events, must we not concede that if they do harm to others, they do so unconsciously, and are like men insane?' To this Anytus answers, 'that they are insane who give money to the Sophists, and still more so the states who allow them to practise their art.' Socrates says, 'Some one of the Sophists must have wronged you, Anytus, or you would not be so bitter.' Anytus says, 'No, I never had anything to do with them.' Socrates asks, 'How then can you know what they are like?' Anytus says, 'Oh, I know well enough what they are like without having had anything to do with them.' Socrates implies that Anytus is speaking not from knowledge but prejudice. He dismisses the subject by adding, 'After all, there is perhaps something in what you say' (καὶ ἵσως τε λέγεις, Meno, p. 92 D).

In this discussion it is observable that the abuse of the Sophists is put into the mouth of Anytus, the accuser of Socrates, who may be looked at as the representative of conservative feeling in Athens. Full justice is done in the dialogue (Meno, p. 90 A) to the eminence of his position, his wealth, and political influence. But afterwards, dramatically, his arbitrary, narrow, and unfair turn of mind comes out. Evidently we cannot say that in the Meno Plato calumniates the Sophists, or vilifies them as opponents and
PLATO'S VIEW OF THE SOPHISTS.

117

rivals of Socrates. Rather he makes it appear that there is something hasty and inconsidered in the popular feeling against them (which is a true, but blundering instinct), and that the philosopher must consider their claims, their tendencies, and the phenomena of their success from a deeper point of view.

To a similar purport Socrates is made to speak in the Republic (p. 492 A), where he says to Adeimantus, 'Perhaps you think with the multitude that youths are corrupted by Sophists, and do not perceive that Society is itself the greatest Sophist, educating and moulding young and old. What Sophist or private instructor could withstand the powerful voice of the world? Don't you see that the so-called Sophists do nothing else but follow public opinion? They teach nothing else but the popular dogmas. They are like the keepers of a wild beast, who, when they have studied his moods and learned to understand his noises, call this a system and a philosophy.' The common accusation had been that the Sophists unsettled young men's opinions, and turned them away from the established beliefs. Socrates implies, 'I am willing to exonerate them from this. Rather I have to complain that the Sophists are too unsophisticated, that they are too much merely echoes of the popular voice; that they have "plus que personne l'esprit que tout le monde a."

Viewed externally the Sophists presented the appearance of a set of teachers, such as first appeared in Greece towards the middle of the fifth century B.C. (Protagoras was born about B.C. 480, and began to practise his art in his thirtieth year, but there were others before him). They were for the most part itinerant teachers, going from city to city. They would make displays of their rhetoric (ἐρασίς), and then invite the youths of their audience to come and receive
instruction with a view to becoming able men in the state (δουλός, habiles homines, &c.). Their instructions were various, rhetoric and dialectic, ethics, music, and physical science. Some, such as Hippias, professed a pantological knowledge; others, as Gorgias, confined themselves to rhetoric. Their profits no doubt varied with their success; some must have been ill-paid and wretched, as is represented by Aristophanes and Isocrates. The leading members of the profession seem to have made large sums of money. On this point, however, Isocrates is at direct issue with Plato. Socrates says in the Meno, p. 91 D, that 'he knew of Protagoras gaining greater wealth by his profession than Phidias and ten other sculptors put together.' And in the Hippias Major (pp. 282–283) Prodicus is said to have made immense sums; Hippias is made to boast that 'when quite a young man he made in Sicily, in a short space of time, more than 150 minae (600. ), and that in one little village, Inycus, he made more than 20 minae' (80l.). He adds, however, 'that he supposes he has made more than any two Sophists put together.' In contradiction to this picture, Isocrates gives a much more limited account of the pecuniary success of the Sophists. He says (De Permutatione, 155–156), 'Not one of the so-called Sophists will be found to have amassed much money. Some of them lived in small, others in very moderate circumstances. Gorgias of Leontium made the most on record. He lived in Thessaly, where people were very rich, attained a great age, was long given up to his business, had no settled habitation in any state, paid no taxes nor contribution, had no wife nor children, and so was free from this the most continual tax of all—and with these advantages beyond others for acquiring a fortune, he only left

behind him at the last 1000 staters' (125l?). This oration was written in the eighty-second year of Isocrates' life, and probably much later than the above-mentioned dialogues of Plato; the fame of the achievements of the Sophists was therefore less fresh. Isocrates, being himself a paid teacher, was complaining of the difficulty of making enough, he was therefore not likely to take a sanguine view of success in this department; also, it is credible that the Sophists did, as is usually the case with persons whose gains are irregular, not save much or leave much behind them. Hence we need not find a great difficulty in the discrepancy of the two statements. Plato represents popular rumours and external surprise at the success of a new profession; Isocrates, taking the other side, goes into details and shows that in the long run there was nothing so very wonderful effected after all.

With regard to the reproach against the Sophists, that their teaching for money at all was something discreditable—an argument has been raised, that this is really no reproach, as the practice of so many respectable men among the moderns may serve to testify. But we should endeavour to put ourselves into the position of the ancients, and the following considerations may help us to do so. (1) The practice of the Sophists was an innovation, and jarred on men's feelings. There was something that to the natural prejudices of the mind seemed more beautiful in the old simple times, when wisdom, if imparted, was given as a gift. As soon as the Sophists began their career, the fine and free spirit of the old philosophers seemed gone. When Hippias boasts of his gains, Socrates ironically replies, 'Dear me, how much wiser men of the present day are than those of old time. You seem to be just the reverse of Anaxagoras. For he is said to have had a fortune left him and to have lost it all, such a poor Sophist was he (οὕτως αὐτῶν ἀνόητα σοφι-
(Hipp. Major, p. 283 A.) (2) With the Sophists systematic education began for the first time. Undoubtedly this was a necessity. But it is equally true that about the administration of systematic education there is something that appears at first sight slavish and mechanical. The Greeks had not yet learned those principles according to which a sense of duty will dignify the meanest tasks. They tested things too exclusively in reference to the standard of the fine and the noble (καλόν). (3) But it was not simply the office of the paid schoolmaster that was disliked in the Sophist. We do not find that the teachers of gymnastics or of harp-playing were held in disrepute. Those who kept schools for boys were looked down upon, it is true, but were not identified with the Sophists. The latter taught not boys, but youths; again, they taught not the necessary rudiments, but something more pretentious—wisdom, philosophy, political skill, virtue, and the conduct of life. To make a market of the highest subjects and of divine philosophy seemed to men like Socrates, Plato, and Aristotle, little less than a sort of simony. There was a charlatanism in the offer to teach these things to all comers, which was from different causes equally offensive to ordinary men and to the philosophers. Men like Anytus and Aristophanes complained that the Sophists corrupted youth by teaching them subtleties and unsettling their opinions. In this complaint there was a part of the truth. The philosophers added the other side, by complain-

30 Cf. Demosthenes de Corone, p. 313.
31 The severity of this principle appears not to have been long maintained in the post-Socratic, or at all events the post-Aristotelian schools. Aristippus, whose worldly spirit puts him into a sort of revolt against Socrates, his master, taught as a Sophist (Diog. Laert. ii. 62), and appears to have lived upon his gains. Zeno, Cleanthes, and Chrysippus, according to Quintilian, mercedes acceptaverunt.
ing that the Sophists were shallow and rhetorical, that they flattered popular prejudices instead of displacing them. The Sophists were vilipended by the philosophers not merely as paid teachers, but as paid charlatans.\textsuperscript{40}

The most characteristic and prominent creation of the early Sophistic era was, in one word, rhetoric. But as rhetoricians, the Sophists were themselves the creatures of their times. Circumstances were ripe in the Greek states for the development of this new direction of the human mind, and it came. Cicero (\textit{Brutus}, c. 12) quoting from Aristotle's lost work, the \textit{Συναγωγὴ τέκνων}, tells us that Rhetoric took its rise in Sicily, when after the expulsion of the tyrants (\textit{i.e.} Thrasybulus, B.C. 467), many lawsuits arose with regard to the claims of citizens now returning from banishment and who had been dispossessed of their property. The incessant litigation which this led to, caused Corax and Tisias to draw up systems of the art of speaking; (for before this time there had been careful speaking and even written speeches, but no fixed method or \textit{rationale}). Hence also Protagoras came to write his commonplaces of oratory and Gorgias his encomia.\textsuperscript{1} Everywhere in Greece circumstances were analogous to those in Sicily. Personal freedom gave rise to the contests of the law courts. Nothing was more necessary than that a citizen should be able to defend his own cause. The demand for instruction in rhetoric, and for the development of all its arts, means, and appliances, was met everywhere by the Sophists.

Hence the impression they produced on the national speech and thought was almost unspeakably great. To trace the technical changes and advances in the various systems from Corax to Isocrates belongs to the history of rhetoric.

\textsuperscript{10} Καὶ ὁ σοφιστὴς ἥρματισθεὶς ἀπὸ φαινομένης σοφίας, ἀλλ’ ὀν και ὄνη. \textit{Aristotle, Soph. Elech.}, II, 6.
It will suffice for the present purpose to make a few remarks on the Sophistical rhetoric in its relation to life and modes of thought. Two separate tendencies seem to have manifested themselves from the very outset among the masters of composition. On the one hand, the Sicilian school, represented by Gorgias of Leontium, Polus of Agrigentum, and their follower, Alcidamas of Elæa, in Asia Minor, aimed at ἐβάσεια, ‘fine speaking.’ On the other hand, the Greek school, led by Protagoras, Prodicus, and Hippias, devoted themselves more especially to ὀρθόσεια, ‘correct speaking.’ From these opposite but concurrent tendencies arose that which may be called ‘style’ in Greece, and which did not exist before the middle of the fifth century.

The achievements of Protagoras and the ‘Greek’ rhetoricians seem to have amounted to no less than the foundation of grammar, etymology, philology, the distinction of terms, prosody, and literary criticism. In judging of the so-called verbal quibbles of the Sophists, we have to transport ourselves to a time anterior to the commonest abstractions of grammar and logic. Protagoras was the first to introduce that thinking upon words which was one manifestation of the subjective tendencies of the day. His work, entitled Ὀρθόσεια (which is mentioned by Plato, Phædrus, p. 267 C), most probably contained a variety of speculations, as well philological as grammatical. And even his Ἀλαξίδεα appears from Plato’s Cratylus (p. 391 C) to have touched upon etymological questions. From Aristotle’s Rhetoric, iii. v., we learn that Protagoras was the first to classify the genders of nouns, calling them ἀρρένα, θήλεα, and σκέπη. From Soph. Elench. xiv. § 1, we learn that he considered the terminations -ις and -ης ought to be appropriated to the masculine gender, so that to say μὴν ὁλομένη would be a solecism. In the Clouds of Aristophanes (v. 668–692),
Socrates is ludicrously introduced as following out these ideas, and wishing to alter the termination of κάρδιος and ἄλκτρυνν to suit the feminine gender. Another of the grammatical performances of Protagoras was the classification of the λόγος or 'form of speech;' into question, answer, command, and prayer (Diogenes Laert. ix. 53), a classification which seems to have had some affinity with that of the moods of verbs. The allusions in the Clouds to the art of metres, versification, and rhythms, seem to imply the practice of similar studies in the school of Protagoras. Lastly, his speculations in etymology and language seem to have been made in support of his philosophical doctrine of 'knowing and being;'—πάντων μέτρων ἄνθρωπος (cf. Plato's Cratylus, &c.).

Prodicus, who is said to have been the master of Socrates (cf. Protagoras, p. 341 A, Hippias Major, p. 282 C), was famous for his distinctions between words of cognate signification and apparently synonymous. He is reported to have said 'that a right use of words is the beginning of knowledge' (πρῶτον γὰρ ὁς φησίς Πρόδικος, περὶ ἀνωμάτων ὁρθότητος μαθέων δι', Euthydem. p. 277 E). In Plato's Protagoras, p. 337, a speech is put into his mouth, which exhibits an amusing caricature of his style. Every sentence contains a verbal refinement, and is thrown back on itself, in order to furnish out some antithetical distinction in language. 'We must be impartial, but not indifferent listeners (κοινοὶ μὲν οὖν, ἵστιν δὲ μη). The speakers should dispute, not wrangle (ἀμφισβητεῖν μὲν, ἱδίζει δὲ μη). So they will gain our esteem, rather than our applause (εὐδοκιμῶμεν καὶ οὐκ εὐποιοῦμεν), and we shall feel rather joy than pleasure (εὐ-φρενολογοῦμεν, οὐχ ἄδοιμοῦμεν).'

In themselves, many of the distinctions drawn by Prodictus were probably of little value—many were overstrained,
and even false; cf. Charmides, p. 163, where a distinction is given which is said to be after the manner of Prodicus:—it is between πολησις and πραξις—πραξις is defined to be πολησις των ἀγαθών. But we must acknowledge the merit of this first attempt at separating the different shades of language, and fixing a nomenclature. The powerful influence of this example (not always a healthy one) may be traced in the style of Thucydides. And its full development was attained in the accurate terminology of Aristotle.

The short speech assigned to Hippias in the Protagoras of Plato (p. 337), and that in Hipp. Maj. p. 282, being obvious caricatures, give us still a conception of his manner. He appears to have united some of the splendour of the Sicilian school to the self-conscious and introverted writing of the Greek rhetoricians. This combination gives the sentences attributed to him a shadowy resemblance to the style of Thucydides, as, for instance, the following:—ἡμᾶς οὖν αἰσχρῶν τήματι φύσιν τῶν πραγμάτων εἰδέναι, σοφιστάσους δὲ δυναι τῶν Ἐλλήνων καὶ κατ’ αὐτὸ τοῦτο νῦν συνελημφανας τῆς τε Ἐλλάδος εἰς αὐτὸ τὸ πριντανέον τῆς σοφίας καὶ αὐτῆς τῆς πόλεως εἰς τὸν μέγαστον καὶ διαβιώτατον οὐκον τόνδε, μηδὲν τούτω τοῦ ἀξιωμάτος ἄξιον ἀποφήμαισθαι (Protag. 337 D). Of course here the pomp of the words covers rapidity of thought, but one can see the outward husk and hollow shell of style.

The influence of Gorgias upon the writers of Greece probably exceeded that of any other Sophist. After his first essays in speculation, he appears to have renounced philosophy, and to have proclaimed himself a teacher of rhetoric. He was chosen by his countrymen, the Leontines, to come as ambassador to Athens in the year 427 B.C., asking aid against Syracuse. Thucydides (III. 86), with his usual reserve on all matters the least extraneous, makes no men-
tion of his name. Diodorus (xii. 53) has the following remarks on this event:—‘At the head of the envoys was Gorgias the rhetorician, a man who far surpassed all his contemporaries in oratorical skill; he also was the first inventor of the art of rhetoric. He amazed the Athenians, quick-witted and fond of oratory as they were (ὅντας ἐφυνεῖς καὶ φιλόλογοι), by the strangeness (τὸ ξενίζοντι) of his language, by his extraordinary ἀντίθεσα, and ἰσόκωλα, and πάρισα, and ὁμοιοτέλευτα, and other figures of the same kind, which at that time from the novelty of their style were deemed worthy of adoption, but are now looked upon as affected and ridiculous when used in such nauseous super-abundance.’ The speeches of Gorgias were thus most elaborately constructed, and, in addition to their almost metrical character, bordered upon poetry also in their use of metaphors and of compound words. Aristotle comments upon the fault of writing prose as if it were poetry, and he severely says that this was done by the first prose writers because they observed how great was the success of poets in covering by their diction the emptiness of their thoughts. Aristotle in another place quotes from Gorgias and from Aleidamas, his follower, several instances of what he calls ‘frigidity’ (ψυχρότης, Rhet. iii. iii. 1), produced by pompous or poetical words and compounds. He also mentions two of the rhetorical tricks of Gorgias. One was that Gorgias boasted he could never be at a loss in speaking; ‘for if he is speaking of Achilles, he praises Pelens,’ i.e. he will go off from his subject into something collateral (Rhet. iii. xvii. 2). The other device was one full of shrewdness: he said, ‘You should silence your adversary’s earnestness

---

41 Rhet. iii. i. 9. Ἐντελέθω σὲ τὸν ποντικὸν πρῶτη ἐζόρρης ἕλθε τῇ λέξει Μακάου παρασκευαὶ τὴν ἐν δόξῃ, διὰ τούτο τοῦτο ἐγένετο λέξις, ὁ Ἐργίλος.
with jest, and his jest with earnest." Among the imitators of Gorgias were Agathon and Isocrates. The speech of Agathon in the Symposium of Plato is an example of the extreme of the flowery style. Socrates remarks at its conclusion, that he has been almost petrified by the speaking Gorgias (i.e. Gorgon's) head which Agathon has presented to him. The influence of Gorgias may also be extensively detected in the antitheses (often forced), the balance of sentences, and the occasionally poetical diction of Thucydides.

Rhetoric, viewed historically, considered as a thinking about words and the possibilities of language, was by no means, as we have seen, coeval with the origin of states and of human thought. It was a somewhat late product of civilisation. But it was a path which there was an inherent necessity for opening and exploring. From this point of view, thanks are due to the more eminent Sophists for their contributions towards the formation of Grecian prose style, for developing the idea of the period, and bringing under the domain of art that which before was left uncultivated. If in their own writing ornament was overdone, they may be considered in this, as in other things, to occupy a transition place, and to have served as pioneers to others.

But there is yet another aspect in which rhetoric must be regarded, and that is, not merely as an affair of words and sentences, but as a direction and phase of thought itself. It consists in attention to form, producing neglect of matter—in striving for the brilliant and the plausible, instead of for the true—in deckung out stale thoughts with a fresh outer garment of words—in enforcing a conclusion without

---

43 Rhet. iii. xviii. 7. Και δειν ἔφη ἔννεπτον γέλατον, καὶ ἐν γέλατα Γοργίας τὴν μὴ σπουδὴν διαφείρειν ἐν σπουδῇ.
having tested the premises. This takes up the arts of the lawyer into the philosopher's or the teacher's chair; it covers its ignorance with a cloak of verbosity; it will never confess there is anything it does not know. This most truly keeps the key of knowledge, and will neither enter in itself nor let other men come in. It speaks things which it does not feel; its utterances come from the fancy, and not from the heart; its pictures are not taken from nature; its metaphors are unnecessary; its pathos is hollow. If language be looked on as not separate from thought, but identical with it, then is rhetoric false thought, as opposed to true. There are, no doubt, various degrees and stages of rhetorical falsehood. The lightest kind is that which consists in some slight exaggeration in a word or an expression. This often takes place in cases where a speaker or writer fully and sincerely believes the general import of what he is asserting; but in setting forth the separate parts he allows himself to quit the stern simplicity of what he actually feels. Again, when a foregone conclusion has lost its freshness, rhetoric is called in in the hope of enlivening it. The most flagrant rhetorical falsity would, of course, consist in the advocacy of propositions which the speaker not only did not believe (in the sense of not feeling or realising them), but absolutely disbelieved. As men are not fiends, this is extremely rare. Rhetoric usually juggles the mind of the speaker as well as of his audience. It takes off the attention of both from examining the truth. It is, for the most part, well-meaning, and is much rather a defender than an impugner of the common orthodox opinions. Hence it was that Plato defined rhetoric to be a trick of flattering the populace. Hence, also, he said that the Sophists studied the humours of society, as one might study the temper of a wild beast. In the practice of the Sophists, Plato saw Rhé-
totic and Sophistry\textsuperscript{43} identical. Sophistry consisted in substituting rhetoric for philosophy, words for thoughts (ἐν τοῖς ὀνόμασι σοφίζωμαι καὶ οὐκ ἐν τοῖς νοημασί, Xen. Cyneg. l.c.) With Plato, philosophy was a higher kind of poetry, in which reason and imagination both found their scope. With the Sophists, it was a harangue (πρὸς κύριος) upon any given subject, with figures and periods to catch applause. Aristotle, indeed, was enabled afterwards to look at rhetoric in a mere abstract way, as the art of composition, and so to separate the Rhetorician from the Sophist, since it was not necessary that Rhetoric should be used in a Sophistical spirit. But Plato always regards Rhetoric as a false impulse in human thought; he always considers it in the concrete, and never as a mere instrument to be used and abused. And that the rhetorical spirit is a reality, attaching itself above all to the highest subjects, to philosophy and religion, and, like the 'bloom of decay,' luxuriantly overgrowing them, —this the experience of all ages and of every thinking man can testify.

But hollow rhetoric is not the only feature of Sophistry, either according to modern acceptation, or in the pictures drawn by Plato. An even more prominent association connected with it is—fallacious reasoning. From the original meaning of the word σοφιζομαι, 'to devise cleverly,'— 'sophism' naturally stands for a trick in language or thought, and Sophistry becomes identical with paralogism used for a dishonest purpose. But this is not merely an association derived from etymology. Plato and Aristotle both directly accuse the Greek 'Sophists,' or professional teachers, of the practice of consciously using fallacious arguments to suit their own purposes. It has of late been ingeniously dis-

\textsuperscript{43} Cf. Gorgias, p. 530 A. ἐν τοῖς ὀνόμασι, ὡς μετὰ τοῦ σοφορίτικῳ καὶ φησιν.
covered and pointed out that at a particular point a change comes over the spirit of Plato's treatment of Sophists, that the dialogues in which the Sophists are mentioned fall into two groups, and that in each of these the being called Sophist exhibits a strongly marked character, so different from that of his homonym in the other group, that if they had not been called by the same name, no reader would have dreamt of identifying them.

The earlier group of dialogues consists of Protagoras, Gorgias, and Republic, in which the great characteristics attributed to the leading Sophists, who are introduced as dramatis personae (Protagoras, Polus, Hippias, Gorgias, Thrasymachus), are—their wordiness, their habit of declaiming and making long speeches, their ignorance of the art of argumentation, their inability to discuss a subject by means of short questions and answers. These personages, widely differing in many important points, both of doctrine and attitude, are represented as having one thing in common, which may be represented positively as a rhetorical and declamatory tendency, and negatively as an incapacity for close reasoning. In Meno, in which the Sophists are mentioned and half-defended against Anytus, Socrates alludes to the Eristics (p. 75, D) as if a distinct class from the Sophists and by no means identical with them. But when we come to the second group of dialogues, consisting of Euthydemus, Sophistes, and Theaetetus, a great change is observable, for the Sophists are now represented as the practitioners of perverse dialectic, as putting captious questions to people and inveigling them into contradictions by means of verbal quibbles, as professors of the art of ἐπιστηκόν. In Euthydemus two Sophists are represented as practising this art on an in-
genious youth, who is rescued from their clutches by Socrates. In Sophistes the Sophist, with his short questions and answers, is expressly contrasted with both the statesman and the Rhetorician. In Thucydides (p. 154, E) the adverb σοφιστικῶς 45 is used summarily to designate the method of captious Eristic, which has no regard to truth, but only to victory, as opposed to honest Dialectic, whose object is the discovery of truth.

There appears, then, to have been a strongly marked change of front in Plato's attack on the Sophists. The only difficulty in explaining this arises from the doubt whether Euthydemus was not one of the earlier dialogues of Plato (as indeed it is generally supposed to have been). Mr. Sidgwick, however, thinks that from the nature of its contents it may be placed in chronological juxtaposition with Sophistes.

However this may be, the difference in view between Protagoras, Gorgias, and Republic, on the one hand, and Euthydemus and Sophistes, on the other hand, seems to point to a historical change that occurred in the characteristics of the Greek Sophists. While the early and greater Sophists were mainly rhetoricians and declaimers, the later Sophists, those of the fourth century B.C., were mainly eristici, or perverse dialecticians. Mr. Sidgwick is of opinion that this arose from the example of the Socratic mode of disputation—that Socrates, by showing his triumphant elenchus, or refutation of opinions and conclusions which he considered unsound, is responsible for the sophistic elenchus, or fallacies, those unfair arguments which Aristotle tells us were used with the view of astounding the listener, in order that out of this triumph reputation, and out of reputation

45 Ἐνεκλήτης σοφιστικῶς εἰς μάχη τοιαύτην, ἀλλήλων τῶν λόγων τῶν λόγως ἐκφράσσομεν.
gain, might accrue; in short, that Socrates was the father of Eristic in all its forms. This is an interesting suggestion, and a certain amount of acceptance must be accorded to it. Doubtless in the half-century which succeeded the death of Socrates a very great impulse was given in Athens to the practice of Dialectic, and thence of Eristic. This appears in the post-Socratic philosophical schools; in the captious arguments invented by the Megarians; in the Platonic dialogues themselves, which are composed throughout on a dialectical, often on an eristical, basis. But still more this tendency must have manifested itself in Athenian society, as we learn from the Topics of Aristotle, which work was written in order to give rules for the intellectual game of Dialectic, as practised at Athens. Socrates may have given the start to this sort of thing; but it just suited the lively and intellectual Athenians, and we may conceive of them at this period as a society possessed by an insatiate appetite for discussion and controversy, whether with a view to truth or to mere victory over an opponent. The Sophists were always rather the creatures than the creators of their age; and as in the fifth century they followed the impulse of the times, and became rhetoricians, and in some cases made contributions to Rhetoric and its subsidiary arts, so in the fourth century they appear merrily swimming with the tide of Dialectic, and drawing profit to themselves out of it,—working out the possibilities of Eristic, and inventing their own fallacious refutations to match the elenchus of Socrates. Their procedure was caricatured by Plato in the Euthydemus, but Aristotle gravely assures us as a matter of fact

46 Soph. El. xi. 5. Οἱ μὲν οὖν τῇ νίκῃ αὐτῆς χάριν ταὐτάτοι ἀριστεῖσθαι ἀπαθεῖσθαι καὶ πλεονεκτεῖσθαι δοκεῖσθαι εἶναι, οἳ δὲ δόξης χάριν τῇ εἰς χρηματισμῷ

that the kind of fallacies therein represented were habitually employed by the Sophists. As collected and analysed by Aristotle, these Sophistical Refutations may claim the honour of having well-nigh exhausted the possibilities of error in human reasoning. Modern logicians have hardly been able to add any new fallacies to the list.

Aristotle says that 'Plato gave no bad definition of Sophistry in making it to be concerned with the non-existent. For the arguments of almost all the Sophists may be said to be concerned with the accidental (i.e. that which has no absolute existence); as, for instance, their question whether Coriscus, the musician, is the same as plain Coriscus; whether, by becoming musical, one absolutely comes into being,' &c. (Metaphys. v. ii. 4). Plato had said (Sophist, p. 254 A), that 'while the philosopher is ever devoted to the idea of the absolutely existent, and thus lives in a region which is dark from excess of light, the Sophist, on the other hand, takes refuge in the murky region of the non-existent.' This 'non-existent' was, as Aristotle explained it, the sphere of the accidental, the conditional, the relative, as contrasted with absolute being. Elsewhere we find that it was a trick of the Sophists to avail themselves of a traditional piece of dialectic 'older than Protagoras,' and to argue that to speak falsely was impossible, for that would be no less than uttering the non-existent, whereas the non-existent has no existence in any sense whatever, and therefore to conceive or utter it is impossible (Enthydem, pp. 284-286). Plato maintains against this argument, and against the doctrines of the Eleatics, that in some sense 'not-being' has an existence. We see then that to set the

18 Soph. Eleuch. i. 8. "Ὅτι μὲν οὖν ἔστιν τι ταὐτὸν λόγων γένους, καὶ ὅτι τοιαύτης έφεσται δυνάμεως οὐχί καλοῦ

μεν σοφιστάς, ἐφόλου.
relative meaning of a word against its absolute signification, to play off the accidental against the essential, formed a main part of the 'Eristic' art.

The view here taken, then, is that while it is true that Eristic was only fully developed by the post-Socratic Sophists, it was not derived by them at first hand from Socrates himself, but came to them through the active dialectic tendencies now spread throughout society, which tendencies they, as professors of the art of disputation, restless in intellect and without earnestness about consequences, appear certainly to have perverted. The birth and prevalence of fallacy no doubt gave birth to a sounder logic, which was necessary as a counteraction to the Sophists, and which their clever manipulation of language suggested. Thus, historically, their vicious practice was advantageous, though this can hardly be reckoned to them as a merit. Independently of the valuable distinction drawn by Mr. Sidgwick between the characteristics of the first and second generation of Sophists, we may still ask whether a certain bias towards fallacy did not exhibit itself even in the first and most eminent members of this profession. Mr. Sidgwick argues justly that Protagoras can hardly have been, as Diogenes Laertius suggests, the inventor of Eristic, else Plato would never have represented him as a perfect child in anything like close dialectic argument. But on the other hand, when we read of the boast of Protagoras (τὸ Προταγόρου ἐπιάγεσθαι) that 'he could make the worse cause the better,' which Aristotle says that men were indignant at, and when we read of the devices of Gorgias (mentioned above, p. 125), we can hardly exonerate the rhetoric even of these worthies from being too facile in the direction of not unconscious fallacy.

Grote repeatedly, and rightly, argues that the Sophists were not a philosophical sect, and had no common philo-
sophical doctrines. Yet the two most eminent among those who first consented to espouse the profession and to accept the name of Sophists, had been beforehand not inconsiderable philosophers, and as such had each their respective connection with previous schools of philosophy. Thus Sophistry may be said to have had a philosophical pedigree of its own. As represented in the persons of the two most eminent Sophists, it sprang almost simultaneously from the north and the south. Also it may be said to have derived its origin more or less immediately from two directly opposite schools of previous thinkers. Protagoras of Abdera starts from the principle of Heraclitus that all is becoming; Gorgias of Leontium took up the Eleatic principle of absolute unity. Both Protagoras and Gorgias may be considered to have held their character as philosophers in some measure distinct from their professional character as rhetoricians and teachers, and yet the results of their philosophising coloured their teaching. The philosophy of the two can never be said to have amalgamated, and yet it exhibits a common element. An accurate statement of the doctrine of Protagoras appears in the Theaetetus of Plato, which is intended to refute it, but which at the same time treats its author with all respect. We see at once that it was a profound doctrine, and of the greatest importance as a 'moment' in philosophy. Heraclitus had said that all is motion, or becoming,—Protagoras analyses this becoming into its two sides, the active and the passive, in other words the objective and subjective. Nothing exists absolutely, things attain an existence by coming in contact with and acting on an organ of sensation, that is, a subject. Thus all existence is merely relative, and depends in each case on a relation to the individual perceiver; and therefore 'man is the measure of all things, of the existent that they exist, and of things non-existent that they
do not exist.' This proposition on the one hand contains
the germ of all philosophy, on the other hand it renders phi-
losophy impossible by reducing all knowledge and existence
to mere sensation. It contains the germ of all philosophy
by asserting that all knowledge, and therefore all existence,
as far as we can conceive it, consists in the relation between
an object and a subject, that every object implies a subject
and every subject an object. This cannot be gainsaid, and
it is in short one of the main purposes of philosophy to lift
men out of their common unreflecting belief in the absolute
existence of external objects into so much idealism as this.
But the principle of Protagoras falls short in its misconcep-
tion and too great limiting of the subjective side of exist-
ence. Objects exist only in relation to a subject, but not
necessarily in relation to individual perceptions. If individu-
al perception is the measure of all things, the same object
will be capable of contradictory qualities at the same moment
according as it appears different to different individuals;
a thing can then be and not be at the same time; the distinc-
tion between true and false will be done away; even
denial (ἀντιλέγειν) must cease. Protagoras acknowledged
these results; he said, 'What appears true to a person is
true to him. I cannot call it false, I can only endeavour to
make his perceptions, not truer but better, i.e. such as are
more expedient for him to entertain.'

Man is indeed the measure of all things, not the in-
dividual man with his changeable and erring perceptions,
but the universal reason of man, manifesting itself more or
less distinctly in the deepest intuitions of those who are pure
and wise, and who attain most nearly to the truth. The
principle of Protagoras, by calling attention to the subject-
ive side of knowledge, led the way to what has been called
'critical' philosophy, to a critic of cognition itself; and this
was a great advance upon former systems, which regarded knowledge and existence too much as if absolutely objective. But Protagoras himself rested in sensationalism, and becoming from his own system sceptical about truth altogether, he seems to have returned (as above mentioned) to mere principles of expediency. His sensational theory and his scepticism about knowledge are not to be regarded as Sophistical, in the Platonic sense of the word. But with this sceptical foundation to all theories, to commence teaching virtue; to have thus reduced virtue to a matter of expediency for daily life—to have combined such acute penetration with so little moral or scientific earnestness—after exploding philosophy to have fallen back upon popular and prudential Ethics—this indeed was to exhibit many of the essential features of that Sophistry against which Plato directed all his strength. We see traces of the same spirit—of acute and active intellect combined with a certain trifling and unreality upon the gravest subjects—in the well-known sentence of Protagoras on the gods: 'Respecting the gods, I neither know whether they exist or do not exist; for there is much that hinders this knowledge, namely, the obscurity of the subject, and the shortness of human life.'

This scepticism, as far as we can conjecture its tendency, does not consist in denying the Grecian Polytheism in order to substitute in its place some deeper conception. It cannot, therefore, be considered parallel to the philosophical contempt of Xenophanes and others for the fables of Paganism. Protagoras despairs of a theology, and proclaims his despair, and falls back upon practical success.

The celebrated thesis of Gorgias, which formed the sub-

---

ject of his book 'On Nature, or the Non-existent,' and of which a sketch is preserved in the Peripatetic treatise, called Aristotle's, De Xenophane, Zenone, et Gorgià, and also in Sextus Empiricus (ad Math. vii. 65'), is one of the most startling utterances of antiquity. It consists of three propositions. (1) Nothing exists. (2) If it does exist, it cannot be known. (3) If it can be known, it cannot be communicated. The extravagant character of this position was denounced by Isocrates in the opening of his Helen. He is speaking of the inveterate habit of defending paradoxes which had so long prevailed, and he asks, 'Who is so behind-hand (ἡπραμαθής) as not to know that Protagoras and the Sophists of that time left us compositions of the kind I have named, and even more vexatious? for how could anyone surpass the audacity of Gorgias, who dared to say that nothing of existing things exists?' Isocrates adds to the name of Gorgias, those of Zeno and Melissus; he had before specified as ridiculous paradoxes the theses that 'it is impossible to speak falsehood'—that 'it is impossible to deny'—that 'all virtue is one'—that 'virtue is a science.' Elsewhere (De Permutat. § 268), he mentions as the 'theories of the old Sophists,' that 'the number of existences was, according to Empedocles, four; according to Ion, three; according to Alemseon, two; according to Parmenides and Melissus, one; according to Gorgias, absolutely none.' We see then that the point of view which Isocrates takes is that of so-called common sense and practical life—that he declines to enter upon philosophical questions at all. He regards the absolute Nihilism of Gorgias as belonging to the same sphere of thought, only a more flagrant development of it, as the doctrine, 'all virtue is a science.' It is always easy to set

---

30 ὃν εἶναι φαύνων οὐδὲν· εἰ δὲ ἐστι, ἡγομένων εἶναι· εἰ δὲ καὶ ἐστὶ καὶ γνωστόν, ἄλλῳ οὐ διηλεύτων ἔκλαν. Arist. De Xenophane, &c. c. v.
aside philosophical views as repugnant to common sense, as mere subtleties and useless paradoxes. But if we enter on philosophy at all, we must accept the dialectic of the reason. The difficulties into which it may lead us must not be rejected as subtleties, but acknowledged, and if possible reconciled with the views of common sense.

Philosophy, before Gorgias, had been occupied with an abstract conception of Being, whether as One or Many. The dialectic of the Eleatics had been directed to establish, against all testimony of the senses, that the only existence possible is one immutable Being. On the other hand, the Ionics maintained the plurality of existences; and Heraclitus especially held the exact contrary to the Eleatic view, that there was no permanence or unity, but all was plurality and becoming. The dialectic of Gorgias coming in here explodes all philosophy by a demonstration that 'nothing exists.' This part of his position he appears to have maintained by bringing Eleatic arguments against the Ionic hypothesis, and Ionic arguments against the Eleatic hypothesis. A If there is existence (εἰ ἦν ἦσσε), it must be either Not-being or Being. It cannot be Not-being, else Being will be identical with Not-being. It cannot be Being, for then it must be either One or Many, either created or uncreate. It cannot be One, for One implies divisibility, i.e. plurality. It cannot be Many, for the Many is based upon the unit of which it is only the repetition, and is so essentially One. Again, it cannot be created, for it must either be created out of the existent or the non-existent. It cannot be the former, else it would have existed already. It cannot be the latter, for

31 Καὶ ὅτι μὲν οὐκ ἔστι, συνθέσις τὰ ἐκφράσεων εἰρήνης, διὸς περὶ τῶν οὐκ ἔτερων λέγοντα, τά γάν, ὡς δοκοῦσιν, ἀποφαίνεται αὐτῶς· οὐ μὲν, ὅτι ἐν καὶ οὐ πολλά· οἱ δὲ αὖ, οὐ πολλά καὶ οὐ χῦν· καὶ οἱ μὲν οὔτε οἱ συνέργαι οἱ δὲ οὐ γενομένα, ἐπιθετοῦσθαι τῇ συνολεικῇ, καὶ διερτήσων. Arist. De Xen., &c. l. c.
nothing can come from the non-existent. Nor can it be Uncreate, for that implies its being Infinite, and the Infinite can have no existence in space.' These arguments are not to be looked at as a mere wanton sporting with words. Rather they contain a very penetrating insight into some of the difficulties which beset the most abstract view of existence. The same difficulties have been felt by other philosophers; thus, in the *Parménides* of Plato, great obstacles have been set forth to considering existence either as One or as Many. And Kant represents it as one of the antinomies of the reason, that the world can neither be conceived of as without a beginning, nor as having had a beginning. No blame can possibly attach to Gorgias for these speculations, nor for the conclusions to which they led. Plato himself, in the *Parménides* (p. 135 D), urges and exhorts the young philosopher to follow out this sort of dialectic. 'You should exercise yourself while yet young,' says Parménides to Socrates, 'in that which the world calls waste of time (*τῆς δοκούσης ἄξρητου ἔνας καὶ καλομένης ὑπὸ τῶν πολλῶν ἀδολεσχίας*), else truth will escape you.' What, then, is this method? It consists in the following out of contrary hypotheses, the one and the many, the like and the unlike, motion, rest, creation, destruction; not only supposing the existence of each of these separate ideas, but afterwards also their non-existence; follow out the consequences in each case, and see what comes of the antinomy. All praise, then, is due to Gorgias, from Plato's point of view, for his stringent dialectic. To the popular mind, such reasonings appear absurd or repugnant. But the philosopher is only stimulated by them to seek for a higher ground of vision, whence these seeming contradictions and difficulties may be seen to be reconciled. We can only regret that we do not possess the entire work of Gorgias, in order to know more accurately
its exact purpose; whether his arguments were meant to have a universal validity, or whether they were only relative to the Ionic and Eleatic philosophies. The latter would seem to be actually the case, whatever was meant by the author himself; for the destructive arguments of Gorgias, while they are of force against previous philosophy, do not touch the universe of Plato, in which there was a synthesis of the one and the many, of being and not-being.

The two remaining theses of Gorgias, that being if existent could not be known, and if known could not be communicated,—contain the strongest form of that subjective idealism afterwards repeated by Kant. They place an impassable gulf between things in themselves and the human mind. We can never know things in themselves; all we know is our thought, and the thought is not the thing. Still less could we communicate them to others, for by what organs could we communicate things in themselves? How by speech could we convey even the visible? In this part of the dialectic of Gorgias we trace an affinity to the doctrines of Protagoras. They each exhibit a tendency to a disbelief in the possibility of attaining truth. The scepticism, however, does not constitute Sophistry. It was not peculiar to the Sophists, but is a characteristic universally of the close of the Pre-Socratic era of philosophy. Aristotle speaks against it very strongly, but he does not call it Sophistry, he attributes it to several great names (Metaphys. III. c. iv.–v.). After arguing against the saying of Protagoras, he mentions that Democritus said 'there is no truth, or it is beyond our finding' (Δημόκριτος γα ἡ σοιων ἐν οὐδὲν εἶναι ἀληθεὶς ἡ ἡμῶν γ' ἀδηλον); that Empedocles said 'thought changes according as men change;' that Parmenides said in the same way, 'thought depends on our physical state;' that Anaxagoras said 'things are according as men conceive them.' Aristotle
SOPHISTRY CONTRASTED WITH PHILOSOPHY. 141

remarks, 'It is surely an evil case, if those who have attained truth most, as loving it best, and seeking it most ardently, hold these opinions. It is enough to make one despair of attempting philosophy. It makes the search after truth a mere wild-goose chase. The cause of these opinions is that men, while speculating on existence, have considered the sensible world to be the only real existence. And this latter is full of what is uncertain and merely conditional' (Metaphys. iii. v. 15, 16). Sophistry then is not constituted by any theories of cognition or existence. It consists in a certain spirit, in a particular purpose with which philosophy, or the pretence of philosophy, is followed. 'Sophistry and dialectic,' says Aristotle, 'are conversant with the same matter as philosophy, but it differs from them both; from the one in the manner of its procedure, the other in the purpose which guides its life. Dialectic is tentative about those subjects on which philosophy is conclusive, and Sophistry is a pretence, and not a reality.'

No other members of the Sophistic profession, so far as we know, dealt with metaphysical questions. They were rhetoricians, grammarians, teachers of mathematics and of what was then known of physical science, teachers of music, teachers of virtue and of politics, and of the art of success in citizen-life, dialecticians, disputants, and experimenters in logic. But it was one of Plato's chief grounds of complaint against them that, while they were by their professional procedure brought into contact with so many of the higher subjects,—they were not philosophers.

We now come to that which is, for our present purpose,

62 Περὶ μὲν γὰρ τὸ αὕτον γένος στρέφεται ἡ σοφιστικὴ καὶ ἡ διαλεκτικὴ τῇ φιλοσοφίᾳ, ἀλλὰ διαφέρει τῇ μὲν τῇ πρὸς τὸν δυνάμεις, τῇ δὲ τοῦ βλαυμαὶ προαιρέσει. Ἐστὶ δὲ ἡ διαλεκτικὴ πειραματικὴ περὶ δὲ ἡ φιλοσοφία γραμματικὴ, ἡ δὲ σοφιστικὴ φαινομένη, οὕτω δ' οὖ. Metaphys. iii. ii. 20.
the most important question with regard to the Sophists,—What was their influence upon ethical thought? In the first place, then, they obviously must have affected moral ideas in Greece simply by talking very much about them. Socrates is commonly spoken of as the first moral philosopher, and in the pages of Xenophon we find him constantly discoursing on moral topics. But as in nature, so in the progress of the human mind, nothing is done per saltum; that which is great and conspicuous in any line is often called 'the first,' while its precursors are left out of sight, but without those precursors it would not have come into existence. This was in all probability the case with regard to the ethical philosophy of Socrates; it was suggested by, and to some extent may be considered to have arisen out of, the manifold lecturings and disputations of the Sophists. We do not gather from Xenophon that there was any marked antagonism or polemic between the real Socrates and the whole profession of the Sophists of his day. It is only the dramatic Socrates of Plato's fancy that is used as the vehicle of Plato's own disapprobation of certain tendencies which he considered to have been manifested by the profession. But the historical Socrates is represented by Xenophon as adopting and using a discourse of Prodicus; and great as may be the differences which to the philosophic eye reveal themselves between the essential spirit of Socrates and that of the Sophists, to the uncritical eyes of most of his contemporaries Socrates doubtless appeared indistinguishable from the other professional talkers on virtue, except by the one circumstance that he did not accept fees. Thus it was only natural that Aristophanes should, uncritically, include Socrates in what was with him a very wide class of persons, and should couple Socrates and Prodicus together as chief 'in wisdom and gnomic thought, of the transcendental Sophists of the day.'
The historical Socrates had really much in common with the Sophists; he is the leading figure in a new era of conscious morality which they had gradually inaugurated.

The very first characteristic that is predicated of the Sophists by Xenophon, Isocrates, and Plato is, that they undertook to teach virtue. To this rule, however, Gorgias was an exception. Meno, in Plato’s dialogue, praises him because he was never heard to make any pretence of the kind, but used to ridicule those who made it,—he himself thought that men ought to be made clever in speaking. Socrates on this asks Meno, ‘What, don’t you then really think that the Sophists can teach virtue?’ to which Meno replies, ‘I know not what to say, Socrates, for I feel like most men on this question. Sometimes I think that they can teach it, and sometimes that they cannot.’ (Men. p. 95 C.)

A nearer definition of what this teaching virtue meant is put into the mouth of Protagoras, who boasts (Plato, Protag. p. 318 E) that he will not mock those who come to him by teaching them mere specialities against their will, as the other Sophists do, such as dialectic, astronomy, geometry, and music. They shall learn from him nothing except what they came to be taught. His teaching will be, good counsel, both about a man’s own affairs, how best to govern his own family, and also about the affairs of the state, how most ably to administer and to speak about state matters. Socrates says, ‘You appear to me to mean the art of Politics, and to undertake to make men good citizens.’ ‘This is just what I undertake,’ says Protagoras. To attempt to discover in this proposal anything insidious or subversive of morality would be quite absurd. Protagoras is represented by Plato throughout the dialogue as exhibiting an elevated standard of moral feelings. Thus he repudiates with contempt the doctrine that injustice can ever be good sense (p. 333 C), and from
There is little evidence conveyed to those who do not make use of the art of Vice, and many are better acquainted with the art of Virtue. Of the arts of virtue, we have further means of

sufficient composition (Σύνθεσις τεκνοποιήματος), and has since reached the declamations of the period of transition from the period of the climax, the other beautiful, and Vice and Virtue, the one greater promises of good; might choose once for all between them, exposed their hollowness, sub-

so as to hesitate a moment to accept. It may be said almost universally that is good. If it depended on the opening of life, all men's moral life consists in a use of the figure of Prodicus fails to
Again, parables of this kind never adequately represent, in all its complexity, the moral truth which they are intended to convey. The 'Choice of Hercules' would make it appear as if the allurements of vice were exterior to us, as if 'Hercules' had merely to select, to the best of his judgment, between two external objects offered to him. But this leaves out of consideration the enemy within the camp, the svbipatov aitov mentioned by Aristotle (Eth. III. i. 11), the fact that temptation is in ourselves, and consists in our own nature, which does not leave us free to make cool judgments and to act upon them. All such psychological refinements had, however, to be developed later.

Several parts of the exhortation which Prodicus puts into the mouth of Virtue are full of merit; a noble perseverance and manliness of character are inculcated; and in the denunciation of vice the following fine sentence occurs: 'You never hear that which is the sweetest sound of all, self-approbation; and that which is the fairest of all sights you never see, a good deed done by yourself!' There is something rather rhetorical in the complexion of this discourse, even as it is given by the Socrates of Xenophon, and he concludes it by saying, 'Prodicus dressed up his thoughts in far more splendid language than I have used at present.' But against the moral orthodoxy of the piece not a word can be said, and we may safely assert, that had all the discourses of the Sophists been of this character, they would not have fallen into such general bad repute as teachers.

Plato never represents the Sophists as teaching lax morality to their disciples. He does not make sophistry to consist in the holding wicked opinions; on the contrary, he represents it as only too orthodox in general, but capable occasionally of giving utterance to immoral paradoxes for the sake of vanity. Sophistry rather tampers and trifles with

VOL. I. L
the moral convictions than directly attacks them. It is easy to see how this came about. Greece was now full of men professing to 'teach virtue.' They were ingenious, accomplished, rivals to each other, above all things desirous of attracting attention. Their talk was on a trite subject, on which it was necessary to say something new. The procedure of the Sophists was twofold, either it was rhetorical or dialectical. They either (1) tricked out the praises of justice and virtue with citations from the old poets, with ornaments of language, and with allegories and personifications. Of this latter kind of discourse we have a specimen in the 'Choice of Hercules,' and again we have the sketch or skeleton of a moral declamation which Hippias, in Plato's dialogue (Hipp. Major, p. 285), says he has delivered with great success, and is about to deliver again. The framework is simple enough. Neoptolemus, after the fall of Troy, is supposed to have asked Nestor's advice for his future conduct. Nestor replies by suggesting many noble maxims. 'Tis a fine piece,' says Hippias complacently, 'well arranged, especially in the matter of the language.' Such like compositions of the Sophists form a sort of parallel to the popular preaching of the present day. Or else (2) they gave an idea of their own power and subtlety, by skirmishes of language, by opening up new points of view with regard to common every-day duties, and making the old notions appear strangely inverted. All the while that they thus argued, no doubt they professed to be maintaining a mere logomachy. But to an intellectual people like the Greeks there would be something irresistibly fascinating in this new mental exercitation. Aristophanes represents the conservative abhorrence which this new spirit awakened. He depicts in a caricature a new kind of education in which everything is sophisticated, that is, tampered with by the intellect. A
sort of casuistry must have been fostered throughout Greece by various concurrent causes; by the drama, which represented, as for instance in the Antigone, a conflict of opposing duties; by the law-courts, in which it was constantly endeavoured to 'make the worse side seem the better;' and lastly, as we have seen, by the Sophists, who, in discoursing on the duties of the citizen, did not refrain from showing that there was a point of view from which 'the law' appeared a mere convention, while 'natural right' might be distinguished from it.

To be able to view a conception from opposite points of sight; to see the unsatisfactoriness of common notions; to feel the difficulties which attach to all grave questions—these are the first stages preparatory to obtaining a wise, settled, and philosophical conviction. Thus far the dialectic of the Sophists and that of Socrates coincide. But the Sophists went no further than these first steps; the positive side of their teaching consisted in returning to the common views for the sake of expediency. That there is danger incurred by the dialectical process, in its first negative and destructive stages, no one has felt more strongly than Plato. He wishes, in his Republic, that dialectic, as a part of education, may be deferred till after thirty, because 'so much mischief attaches to it;' because 'it is infected with lawlessness.' 'As a supposititious child having grown up to youth, reverencing those whom he thought to be his parents, when he finds out he is no child of theirs, ceases his respect for them and gives himself up to his riotous companions; so is it with the young mind under the influence of dialectic. There are certain dogmas relating to what is just and right, in which we have been brought up from childhood—obeying and reverencing them. Other opinions recommending pleasure and license we resist, out of respect for the old hereditary maxims. Well,
then, a question comes before a man; he is asked, what is the right? He gives some such answer as he has been taught, but is straightway refuted. He tries again and is again refuted. And when this has happened pretty often, he is reduced to the opinion, that nothing is more right than wrong; and in the same way it happens about the just and the good and all that he before held in reverence. On this, naturally enough, he abandons his allegiance to the old principles and takes up with those that he before resisted, and so from a good citizen he becomes lawless’ (Repub. pp. 537–538). It is obvious that the process of dialectic here described consists in nothing more than starting the difficulties, in other words, stating the question of morals. Plato does not here attribute antinomian conclusions to the teachers of dialectic; he speaks of the disciple himself drawing these, from a sort of impatience, having become dissatisfied with his old moral ideas, and not waiting to substitute deeper ones.

Throughout his dialogues Plato does not attribute lax or paradoxical sentiments to the greater Sophists; he puts these in the mouths of their pupils, such as Callicles, the pupil of Gorgias, or of the inferior and less dignified Sophists, as Thrasymachus. Sophistry consists for the most part in outward conformity, with a scepticism at the core; hence it tends to break out and result occasionally in paradoxical morality, which it is far from holding consistently as a system. We shall have quite failed to appreciate the true nature of Sophistry, if we miss perceiving that the most sophistical thing about it is its chameleon-like character. One of the most celebrated ‘points of view’ of the Sophists was the opposition between nature and convention. Aristotle speaks of this opposition in a way which represents it to have been in use among them merely as a mode of arguing, not as a
THE OPPOSITION OF 'LAW' AND 'NATURE.'

The definite opinion about morals. He says (Sophist. Elench. xii. 6), 'The topic most in vogue for reducing your adversary to admit paradoxes is that which Callicles is described in the Gorgias as making use of, and which was a universal mode of arguing with the ancients,—namely, the opposition of "nature" and "convention"; for these are maintained to be contraries, and thus justice is right according to convention, but not according to nature. Hence they say, when a man is speaking with reference to nature, you should meet him with conventional considerations; when he means "conventionally," you should twist round the point of view to "naturally." In both ways you make him utter paradoxes. Now by "naturally" they meant the true, by "conventionally" what seems true to the many.' Who was the first author of this opposition is uncertain. Turning from the Sophists to the philosophers, we find the saying attributed to Archelaus (Diog. Laert. ii. 16), 'That the just and the base exist not by nature, but by convention.' This Archelaus was the last of the Ionic philosophers, said to be the disciple of Anaxagoras and the master of Socrates. 'He was called the Physical Philosopher,' says Diogenes, 'because Physics ended with him, Socrates having introduced Ethics. But he, too, seems to have handled Ethics. For he philosophized on laws, and on the right and the just; and Socrates succeeding him, because he carried out these investigations, got the credit of having started them.' About the same period Democritus is recorded to have held that 'the institutions of society are human creations, while the void and the atoms exist by nature.' He also said, that the perceptions of sweet and bitter, warm and cold, were νόμος, that is, what we

---

53 Καὶ τὸ δίκαιον εἶναι καὶ τὸ ἀσάρχην
54 Ποιητὴν δὲ νόμομα εἶναι. Φώνητε δὲ
οὐ φώνητε, ἀλλὰ νόμου.
should call 'subjective.' These reflections indicate the first
dawn of Ethics. They show that philosophy has now come
to recognise a new sphere; beyond and distinct from the
eternal laws of being there is the phenomenon of human
society, with its ideas and institutions. The first glance at
these sees in them only the variable as contrasted with the
permanent, mere convention as opposed to nature. Ethics
at its outset by no means commences with questions about
the individual. It separates 'society' from 'nature,' as its
first distinction. This was because in Greece the man was
so much merged into the citizen; even Aristotle says 'the
state is prior to the individual;' the individual has no mean-
ing except as a member of the state. It is a subsequent step
to separate the individual from society: first sophistically,
for the sake of introducing an arbitrary theory of morals;
at last, philosophically, to show that right is only valid when
acknowledged by the individual consciousness, but at the
same time that the broad distinctions of right and wrong
are more objective and permanent than anything else, more
absolutely to be believed in than even the logic of the in-
tellect.

Looking at the Sophists rather as the promulgators than
as the inventors of this opposition between φύσις and νόμος,
we see it applied in the person of Callicles, their sup-
posed pupil (Gorgias, pp. 483-484), to support crude, para-
doxical, and anti-social doctrines; to maintain that nature's
right is might, while society's right (which is unnatural, and
forced upon us for the benefit of the weak) is justice and
obedience to the laws. It is a carrying out of exactly the
same point of view, to say, as Thrasymachus is made to do in
the Republic of Plato (p. 338 C), that justice is 'the advantage
of the stronger.' This position is there treated as a mere
piece of 'Eristic.' It is met by arguments that are themselves
partly captious and sophistical. These applications of the principle are of course dramatic and imaginary in Plato’s pages, but we may fairly conceive them analogous to what was occasionally heard uttered in Athenian society. Another ethical topic with which the Sophists would be sure to deal was the question, What is the chief good? We have before observed that this was a leading idea in the early stages of Grecian morals. In the discourses of the Sophists various accounts would be given of the matter. Sometimes, as in the fable of Prodicus, happiness, or the chief good, would be represented as inseparable from virtue; at other times a rash and unscrupulous Sophist, like Polus in the Gorgias of Plato (p. 471), would be found to assert that the most enviable lot consists in arbitrary power, like that of a tyrant, to follow all one’s passions and inclinations. This assertion of arbitrary freedom for the individual, though, of course, not consistently maintained by the Sophists, was yet one of the characteristics of their era.

We have already incidentally referred to several of Aristotle’s views of the Sophists and Sophistry. He does not, any more than Plato, speak of definite doctrines belonging to the Sophists, as if they were a school of philosophers with their own metaphysical or ethical creed. He speaks repeatedly of their practice, of their method, of certain tricks in argument commonly used by them; he says (Eth. x. ix. 20) that in their teaching they put Rhetoric on a level with Politics; (Rhet. i. i. 14) that the Sophist differs from the Rhetorician (τῷ προαιρέσθαι) in the purpose or aim with which he uses the artifices of Rhetoric; (Soph. El. xxxiii. 11) that Sophistry is the near neighbour of Dialectic; (ib. xi. 5) that it differs from Eristic pure and simple in employing fallacy for the purposes of gain. These utterances, which in different forms are often repeated, have all the air of being

In the relation of the Sophists to society in general, the
question has been raised, Did they impair the morality of
Greece? The answer must be a mixed one. Owing to the
influence of the Sophists, and also to other causes, thought
was less simple in Greece at the end of the fifth century than
it had been at the beginning. Between the age of Pisistratus
and that of Alcibiades, the fruit of the tree of knowledge had
been tasted. Men had passed from an unconscious into a
conscious era. All that double-sidedness with regard to ques-
tions, which is found throughout the pages of Thucydides,
and which could not possibly have been written a hundred
years before, is a specimen of the results of the Sophistical era.
The age had now become probably both better and worse. It
was capable of greater good and of greater evil. A character
like that of Socrates is far nobler than any that a simple
stage of society is capable of producing. The political decline
of the Grecian states alone prevented the full development of
what must be regarded as a higher civilisation. The era of
the Sophists then must be looked upon as a transition period
in thought—as a necessary, though in itself unhappy, step
in the progress of the human mind. The subjective side of
knowledge and thought was now opened. Philosophy fell
into abeyance for a while, under the scepticism of Protagoras
and Gorgias, but only to find a new method in Socrates and
Plato. Ethics had never yet existed as a science. Popular
moralising and obedience to their laws, was all the Greeks
had attained to. But now discussions on virtue, on the laws,
on justice, on happiness, were heard in every corner; at times
rhetorical declamation; and at times subtle difficulties or
metaphysics. The dialectic begins by the emergent into the
life of Socrates.

The active mode of examination
we may succeed in establishing a few points at all events about Socrates, and in discerning where the doubt lies about others. There seems to be no reason whatever against receiving in their integrity the graphic personal traits which Plato has recorded of his master. The description of him, which is put into the mouth of Alcibiades at the end of the *Symposium*, seems to have in view the exhibition, in the concrete, of those highest philosophic qualities which had before been exhibited in the abstract. Plato does not shrink from portraying the living irony which there was in the appearance of Socrates, his strange and grotesque exterior covering, like the images of Silenus, a figure of pure gold within. Other peculiarities of the man have a still deeper significance, being more essentially connected with his mental qualities. Not only did he excite attention by a robustness and versatility of constitution which could bear all extremes, but also by another still more strange idiosyncrasy; he seems to have been liable to fall into fits of abstraction, almost amounting to trances. During the siege of Potidæa, while on service in the Athenian camp, he is recorded to have stood fixed in one attitude a whole night through, and when the sun rose to have roused himself and saluted it, and so returned to his tent. It has been observed that the peculiar nervous constitution which could give rise to this tendency, and which seems to have an affinity to the clairvoyance of Swedenborg and others among the moderns, was probably connected with that which Socrates felt to be unusual in himself, that which he called τὸ ἀναμνήσθω, 'the supernatural,' an instinctive power of presentiment which warned and deterred him from certain actions, apparently both by considerations of personal well-being, and the probable issue of things, and also by moral intuitions as to right and wrong. This 'supernatural' element in Socrates (which he seems to have believed
to have been shared, in exceedingly rare instances, by others) cannot be resolved into the voice of conscience, nor reason, nor into the association of a strong religious feeling with moral and rational intuitions, nor again into anything merely physical and mesmeric, but it was probably a combination, in greater or less degrees, of all. There are other parts of the personal character of Socrates which are also parts of his philosophical method; for his was no mere abstract system, that could be conveyed in a book, but a living play of sense and reason; the philosopher could not be separated from the man. Of this Xenophon gives us no idea. But in Plato's representation of the irony of Socrates we have surely not only a dramatic and imaginative creation, but rather a marvellous reproduction (perhaps artistically enhanced) of the actual truth. To this Aristotle bears witness, in stating as a simple fact that 'Irony often consists in disclaiming qualities that are held in esteem, and this sort of thing Socrates used to do' (Eth. iv. vii. 14). The irony of Socrates, like any other living characteristic of a man, presents many aspects from which it may be viewed. It has (1) a relative significance, being used to encounter, and tacitly to rebuke, rash speaking, and every kind of presumption. It was thus relative to a Sophistical and Rhetorical period, but has also a universal adaptability under similar circumstances. (2) It indicates a certain moral attitude as being suitable to philosophy, showing that in weakness there is strength. (3) It is a part of good-breeding, which by deference holds its own. (4) It is a point of style, a means of avoiding dogmatism. (5) It is an artifice of controversy, inducing an adversary to expose his weakness, maintaining a negative and critical position. (6) It is full of humour; and this humour consists in an intellectual way of dealing with things, in a contrast between the conscious strength of the wise man and
the humility of his pretensions, in a teacher coming to be taught, and the learner naively undertaking to teach. Such are some of the most striking features in the mien and bearing of Socrates, not only one of the wisest, but also one of the strangest beings that the world has ever seen; who moved about among men that knew him not. One man alone, Plato, knew him and has handed down to us the idea of his life. When now we come to his doctrines, Plato, as is acknowledged, ceases to be a trustworthy guide. The sublime developments of philosophy made by the disciple are with a sort of pious reverence put into the mouth of the master. We are driven then to criticism, in order to assign to Socrates, as far as possible in their naked form, his own attainments.

The statements of Aristotle would seem to furnish a basis for an estimate of the Socratic doctrine; but even these cannot be received without a scrutiny, for Aristotle was so imbued with the writings of Plato, that he seems at times to regard the conversations depicted in them as something that actually had taken place. He speaks of the Platonic Socrates as of an actual person. A remarkable instance of this occurs in his Politics (ii. vi. 6), where, having criticised the Republic of Plato, he proceeds to criticise the Laws also, and says, ‘Now, all the discourses of Socrates exhibit genius, grace, originality, and depth of research; but to be always right is, perhaps, more than can be expected.’

‘The discourses of Socrates’ here stand for the dialogues of Plato, which is the more peculiar in the present case, since in the Laws of Plato, the dialogue under discussion, Socrates does not appear at all as an interlocutor. In other places, however, we may judge from Aristotle’s manner of speaking that he refers to the real Socrates (see note on Eth. vi. xiii. 5), and not to the

---

53 τὸ μὲν οὖν περί τὸν ἔχων πάντες | τὸ μουσικόν καὶ τὸ εὐθυτικόν, καλὰς
οἱ τοῦ Σωκρᾶτος λόγοι καὶ τὸ καφῆς καὶ | ὑπὲρ πάντα ἔσω χάλεσις.
Socrates of literature. The most important passages of this kind are where he draws a distinction between Socrates and Plato, and states their relation to each other; cf. *Metaphys.* i. vi. 2, xii. iv. 3–5. The second of these passages contains a repetition and an expansion of the former; it may, therefore, be quoted alone. Aristotle is relating the history of the doctrine of Ideas. He tells us how it sprang from a belief in the Heraclitean principle of the flux of sensible things, and the necessity of some other and permanent existences, if thought and knowledge were to be considered possible. He proceeds, that Socrates now entered on the discussion of the ethical virtues, and was the first to attempt a universal definition of them—definition, except in the immature essays of Democritus and the Pythagoreans, having had no existence previously. ‘Socrates was quite right in seeking a definite, determinate conception of these virtues (συλλογιζεσθαι), for his object was to obtain a demonstrative reasoning (συλλογιζεσθαι), and such reasonings must commence with a determinate conception. The force of dialectic did not yet exist, by means of which, even without a determinate conception (χωρίς τοῦ τί ἔστι), it is possible to consider contraries, and to enquire whether or not there be the same science of things contrary to one another. There are two things that we may fairly attribute to Socrates, his inductive discourses (τούς τό ἐπακτικῶς λόγους) and his universal definitions. These universals, however, Socrates did not make transcendental and self-existent (χωριστά), no more did he his definitions. But the Platonists made them transcendental, and then called such existences Ideas.’

This interesting passage assigns to Socrates, first, his subjects of enquiry, namely, the ethical virtues; second, his philosophical method, which was to fix a determinate conception or universal definition of these, by means of inductive
discourses, by an appeal to experience and analogy. His definition was an immense advance on anything which had
gone before, and yet it fell far short of the Platonic point of
view. The reasoning of Socrates was demonstrative or syllo-
gistic, and therefore one-sided. His conceptions were defi-
nitely fixed so as to exclude one another. He knew nothing
of that higher dialectic, which, setting aside the first limited
and fixed conception of a thing, from which the contrary of
that thing is wholly excluded, asks, Is there not the same
science of things contrary to each other? Is not a thing
inseparable from, and in a way identical with, its contrary?
Is not the one also many, and the many one? In another
point also the conceptions formed by Socrates differed from
the Ideas of Plato—that they had no absolute existence, they
had no world of their own apart from the world of time and
space. We see, then, the gulf which is set by this account of
Aristotle's between the historic Socrates and the Socrates of
Plato. The historic Socrates was quite excluded from that
sphere of contemplation on which the Platonic philosopher
enters (Répub. p. 510), where all hypotheses and all sensible
objects are left out of sight, and the mind deals with pure
Ideas alone. According to Aristotle, Socrates had not attained
to the higher dialectic which Plato attributes to him. No
doubt, however, Plato discerned in the method which Socrates
employed in his conversations,—in his enquiring spirit, in
his effort to connect a variety of phenomena with some gen-
eral law, in his habit of testing this law by appeals to fresh
experience and phenomena,—hints and indications of a phi-
losophy which could rise above mere empirical generalisations.
The method was not so much to be changed as carried further,
it need only pass on in the same direction out of subordinate
into higher genera.

Aristotle always says about Socrates that he confined him-
self to ethical enquiries. This entirely coincides with the saying of Xenophon, that he never ceased discussing human affairs, asking, What is piety? what is impiety? what is the noble? what the base? what the just? what the unjust? what is temperance? what is madness? what is a state? what constitutes the character of a citizen? what is rule over man? what makes one able to rule? (Memor. i. i. 16.) In all this we see the foundation of moral philosophy as a science, and hence Socrates is always called the first moral philosopher. But we have already remarked (see above, pp. 142 and 149) that the way was prepared for Socrates by Archelaus, by the Sophists, and by the entire tendencies of the age. There is another saying about Socrates which is a still greater departure from the exact historical truth, namely, that he divided science into Ethics, Physics, and Logic. It is quite a chronological error to attribute to him this distinct view of the divisions of science. He never separated his method of reasoning from his matter, nor could he ever have made the method of reasoning into a separate science. In Plato even, Logic has no separate existence; there is only a dialectic which is really metaphysics. And we may go further, and say that in Aristotle Logic has no one name, and does not form a division of philosophy. Again, Socrates probably never used the word Ethics to designate his favourite study. If he had used any distinctive term, he would have said Politics. With regard to Ethics also, we may affirm that in Plato they are not as yet a separate science, and in Aristotle only becoming so. As to Physics, Socrates appears rather to have denied their possibility, than to have established their existence as a branch of philosophy. The above-mentioned division is probably not older than the Stoics.

54 Περί μεν τα ἤθη πραγματευμένου, περί δὲ τῆς δινή φύσεως οὐκέτα. Mel. i. vi. 2.
Pursuing our negative and eliminatory process with regard to the position of Socrates in the history of thought, we may next ask what was his hold upon that tenet which in Plato’s dialogues appears not only closely connected with his moral and philosophical views in general, but also is made to assume the most striking historical significance in connection with his submission to the sentence of death—his belief in the immortality of the soul. But on this point also we can only say that a different kind of impression is left on our minds by the records of the last conversations of Socrates, as severally furnished by Plato and by Xenophon. In Xenophon’s *Memorabilia* and *Apologia Socratis* 87 Socrates is asked whether he has prepared his defence. He answers that ‘His whole life has been a preparation, for he has never acted unjustly.’ It is possible that this answer might have had a double meaning: on the one hand a literal meaning—that his conduct was the best answer to his accusers; on the other hand a religious meaning—that his life had been a *preparation mortis*; but Xenophon, or his imitator, appears only to have understood the saying in the former and literal sense. When reminded that the judges have often condemned those that were really innocent, Socrates replies that he has twice been stopped by the supernatural sign when thinking of composing a defence—that God seems to intimate to him that it was best for him to die—that if he is condemned he will meet with an easy mode of death—at a time when his faculties are still entire—whereas, if he were to live longer, only old age and infirmities and loss of his powers would await him—that he knows good men and bad are differently estimated by posterity after their deaths—and that he leaves his own cause in

87 The genuineness of this work has been doubted, and Zeller pronounces it to be certainly spurious. But it was at all events some ancient writer’s view of Socrates. *Valent quantum.*
the hands of posterity, being confident they will give a right verdict between him and his judges. The only sentence recorded by Xenophon (besides the one above mentioned) that admits the possibility of being referred to a future life, is where Socrates is mentioned to have said in reference to Anytus, ‘What a worthless fellow is this, who seems not to know that whichever of us has done best and most profitably for all time (εἰς τὸν ἄσι κρόνον), he is the winner.’ In this saying, Plato might have discovered a reference to immortality, but Xenophon takes it to mean merely ‘the long run,’ applying it to the bad way in which the son of Anytus afterwards turned out. If we separate from the speeches recorded by Xenophon the allusion which Socrates makes to his ‘supernatural sign,’ which shows a sort of belief in a religious sanction to the course he was taking; — the rest resolves itself into a very enlightened calculation and balance of gain against loss in submitting to die. The *Phaedo* of Plato has elevated this feeling into something holy; it puts out of sight those parts of the calculation which consisted in a desire to escape from the pains of age by a painless death, and in a regard to the opinion of posterity; and it makes prominent and all-absorbing the desire for that condition on which the soul is to enter after death. Were it not for Plato, we should have had an entirely different im-

---

58 Zeller points out that even in the *Apology* of Plato (which is probably the most historical of all Plato’s delineations of Socrates), Socrates expresses himself with doubt and caution on the subject of the immortality of the soul. (p. 40 C.) At the same time Zeller calls attention to the discourse on immortality put into the mouth of the dying Cyrus in the *Cyropaedia* of Xenophon, as probably representing the mind of Socrates, ‘so that we are fain to suppose that he considered the existence of the soul after death to be probable, although he did not pretend to any certain knowledge on the point.’ (See *Socrates and the Socratic Schools, translated from the German of Dr. E. Zeller* by O. J. Reiche, &c. London, 1868.) Zeller’s account of Socrates is admirable and exhaustive. The above pages, written many years ago, only aim at giving a suggestive outline.
pression of the death of Socrates, an entirely different kind of sublimity would have been attached to it. Instead of the almost Christian enthusiasm and faith which we are accustomed to associate with it, we should only have known of a Stoical resignation and firmness—an act indeed which contains in itself historically the germ of Stoicism. The narrative of Xenophon no doubt misses something which Plato could appreciate, but it at all events enables us to understand how both the Cynic and Cyrenaic morality sprang from the teaching and life of Socrates.

One more point is worth notice in the Xenophontean Apology of Socrates. It is the way he answers the charge of corrupting youth. Having protested against the notion of his teaching vice to any, when Melètus further urges, 'Why, I have known those whom you have persuaded not to obey their parents;' Socrates replies, 'Yes, about education, for this is a subject they know that I have studied. About health people obey the doctor and not their parents; in state affairs and war you choose as your leaders those that are skilled in these matters; is it not absurd, then, if there is free trade in other things, that in the most important interest of all, education, I should not be allowed to have the credit of being better skilled than other men?' The fallacy of this reasoning is obvious, for had Socrates claimed to be chosen 'Minister of Education' by the same persons who voted for the Archons and the Generals, or had he succeeded in persuading the fathers that he was the best possible teacher for their sons, nothing could have been said against it. But the complaint against him was that he constituted youths, who were unfit to judge, the judges of their own education, and thus inverted all the natural ideas of family life. One can well understand the invidiousness which would be encountered by one undertaking such a position and defending it in the
words recorded. Viewing this attitude of Socrates merely from the outside, one can justify, in a manner, the caricature of it drawn by Aristophanes. We see from this point of view how Socrates was a Sophist, and must have exhibited a merely Sophistical appearance to many of his contemporaries. But from another point of view, looking at the internal character and motives of the man, his purity and nobility of mind, his love of truth, his enthusiasm (Schwärmerei, as the Germans would call it), his obedience to some mysterious and irresistible impulse, and his genius akin to madness,—we must call him the born antagonist and utter antipodes of all Sophistry. There is an opposition and a contradiction of terms in all great teachers. While they are the best men of their times, they seem to many wicked, and the corrupters of youth. The flexibility and ardour of youth make the young the most ready disciples of a new and elevated doctrine. But this goes against the principle that the children should honour the parents. Hence a great teacher sets the ‘children against the fathers’; and the higher morality which he expounds, being freer and more independent of positive laws; being more based on what is right in itself, and on the individual consciousness and apprehension of that right,—tends also in weaker natures to assume the form of license. This is one application of the truth, that new wine cannot safely be put into old bottles.

The positive results that are known to us of the ethical philosophy of Socrates are of course but few. Aristotle’s allusions restrict themselves virtually to one point,—namely, the theory that ‘Virtue is a science.’ This doctrine is mentioned in its most general form Eth. (Eud.) vi. xiii. 3. Its application to courage is mentioned, Eth. iii. viii. 6—that Socrates said courage was a science. And the corollary of the doctrine, that incontinence is impossible, for it is impossible to know
what is best and not do it—is stated by Eudemus, *Eth. vii.* ii. 1. These allusions agree equally with the representations of Plato and of Xenophon, we may therefore treat them as historical. It remains to ask what was the occasion, the meaning, and the importance of this saying that ‘Virtue is a science.’ The thought of Socrates was so far from being an abstract theory, it was so intimately connected with life and reality, that we are enabled to conceive how this proposition grew up in his mind, as a result of his age and circumstances. (1) It was connected with a sense of the importance of education. This feeling was no doubt caused in part by the procedure of the Sophists, which had turned the attention of all to general cultivation, and especially to ethical instruction. The question began now to be mooted, whether virtue—e.g., courage, could be taught? (cf. Xen. *Memor.* iii. ix. 1.) Socrates appears on this question to have taken entirely the side of the advocates of education. The difficulties which are shown to attach to the subject in the *Meno* of Plato we may consider to be a later development of thought, subsequent even in the mind of Plato to *Protagoras, Laches*, &c. We may specify three different stages of opinion as to the question, Can virtue be taught? The Sophists said ‘Yes,’ from an over confidence of pretensions, and from not realising the question with sufficient depth. Socrates said ‘Yes,’ giving a new meaning to the assertion; wishing to make action into a kind of art, to make self-knowledge and wisdom predominate over every part of life. Plato said ‘No,’ from a feeling of the deep and spiritual character of the moral impulses. He said, ‘Virtue seems almost to be an inspiration from heaven sent to those who are destined to receive it.’

---

38 Θεία μονή παραγείρομένη ἐνε νοι. *Meno.* p. 99 E. *Afterwards.* (Repub. 518. E) he said 'All the cardinal virtues can be acquired, except Wisdom (φόρμαι) which is innate.'
taking again the human side, would say 'Yes,' implying, however, that the formation of habits was an essential part of teaching, and allowing also for some differences in the natural disposition of men. (2) This doctrine was connected with the inductive and generalising spirit of Socrates, it was an attempt to bring the various virtues, which Gorgias used to enumerate separately (cf. Plato, *Meno*, p. 71, Aristot. *Politics*, l. xiii. 10), under one universal law. Thus the four cardinal virtues, justice, temperance, courage, and wisdom, he reduced all to wisdom. (3) The doctrine had two sides. It on the one hand contained implicitly the theory of 'habits,' but was at the same time a sort of empiricism. 'Courage consists in being accustomed to danger.' (This is the expression of the doctrine given, Xen. *Memorab.* iii. ix. 2, and Aristot. *Eth.* iii. viii. 6.) On the other hand, it implied rather self-knowledge, and a consciousness of a law; which is quite above all mere acquaintance with particulars. This is drawn out in the *Laches*, where courage is shown to consist in the knowledge of good and evil; and in the *Republic* it is described as that highest kind of presence of mind, which maintains a hold of right principles even amidst danger. (4) We have said that Socrates wished to make action into a kind of art. It seems to have been a favourite analogy with him to remark that the various craftsmen studied systematically their own crafts; but that Politics (which would include the direction of individual life) was not so learned. Out of this analogy, no doubt, sprang the further conclusion that human life must have its own proper function (*σμήν*, cf. *Repub.* p. 353). Virtue, then, according to the point of view of Socrates, became the science of living. So expressed, the doctrine easily takes a utilitarian and somewhat selfish turn; as, indeed, it does in the *Protagoras*, where virtue is made the science of the good, but 'the good' is identified with pleasure. Under
this aspect the doctrine presents an affinity to Benthamism, and also to the practical views of Goethe, and at the same time enables us to understand how it was possible for the Cyrenaic philosophy to spring out of the school of Socrates. It lays the foundation for conscious morality, by placing the grounds of right and wrong in the individual reason. It forms the contradiction to the Sophistical saying, 'justice is a convention' (νόμος), by asserting that 'justice is a science,' that is, something not depending on society and external authority, but existing in and for the mind of the individual. The Peripatetics improved upon this—pointing out that Socrates, instead of identifying virtue with the rational consciousness, should have said it must coincide with the rational consciousness; in other words, that his formula ignored all distinction between the reason and the will.

This defect in the definition of Socrates exhibits one of the characteristics of early Ethics, namely, that they contain extremely little psychology. At first men are content with the rudest and most elementary mental distinctions; afterwards greater refinements are introduced. Plato's threefold division of the mind into Desire, Anger, and Reason, was the first scientific attempt of the kind. But even in Plato, the distinction between the moral and the intellectual sides of our nature was hardly established. Partly we shall see that this was a merit, and consciously admitted in order to elevate action into philosophy; partly, it was a defect proceeding from the want of a more definite psychology. Socrates identified the Will with the Reason. We can understand this better, if we remember that the practical question of his day always was, not, What is Right? but, What is good? Socrates argued that every one would act in accordance with their answer to this question; that they could not help doing what they conceived to be good. Hence incontinence was im-
possible. The argument, however, is a fallacy because it leaves out of sight the ambiguity of the word good. Good is either means or end. All men wish for the good as an end; that is, good as a whole, as a universal. All wish for happiness and a good life. But good as a means does not always recommend itself. The necessary particular steps appear irksome or repulsive. Hence, as it is said by Eudemus, Eth. vii. iii. 5, a distinction must be drawn with regard to this phrase 'knowing the good.' In one sense a man may know it, in another not. Undoubtedly, if a perfectly clear intellectual conviction of the goodness of the end, and of the necessity of the means, is present to a man, he cannot act otherwise than right.

There was another paradox connected with the primary doctrine of Socrates. It was that injustice, if voluntary, is better than if involuntary. This startling proposition appears to gainsay all the instincts of the understanding, and its contradictory is assumed by Eudemus (Eth. vi. v. 7). But it is stated by Socrates, and supported by arguments (Xen. Memorab. iv. ii. 20), and it is again maintained dialectically, though confessed to be a paradox, in Plato's dialogue called Hippias Minor. The key to the paradox is to be found in this, that the proposition asserts, that if it were possible to act with injustice voluntarily, this would be better than if the same act were done involuntarily. But by hypothesis it is impossible for a man really to do wrong knowingly. It would be a contradiction in terms, since wrong is nothing else than ignorance. Therefore the wise man can only do what is seemingly wrong. His acts are justified to himself and are really right. The effect of this proposition is to enforce the principle that wisdom and knowledge are the first things, and action the second. The same is expressed in the Republic of Plato (p. 382 B), where it is asserted that
the purest and most unmixed lie is not where the mind knows what is true and the tongue says what is false, but where the mind thinks what is false. *Mutatis mutandis*, we might compare these tendencies in the Socratic teaching to the elevation of Faith over Works in theological controversy.

The dialectical difficulties of morality characteristic of the Sophistical era appear from Xenophon's account to have frequently occupied the attention of Socrates. Thus Aristippus is recorded to have assailed him with the question whether he knew anything good. Whatever he might specify, it would have been easy to show that this was, from some points of view, an evil. Socrates, being aware of the difficulty, evaded the question by declining to answer it directly. He said, 'Do you ask if I know any good for a fever? or for the ophthalmia? or for hunger? For if you ask me if I know any good, that is good for nothing, I neither know it, nor wish to know it' (Xen. *Memorab.* iii. viii. 3). This answer implies the relative character of the term good. The puzzle of Aristippus was meant to consist in playing off the relative against the absolute import of 'good.' Other subtleties Socrates is mentioned to have urged himself, as for instance in the conversation with Euthydemus (*Memorab.* iv. 2), whose intellectual pride he wished to humble, he shows that all the acts (such as deceiving, lying, &c.) which are first specified as acts of injustice, can in particular cases appear to be just. In fact, the unsatisfactoriness of the common conceptions of justice is suggested here just as it is in the *Republic* of Plato. It is probable that the historic Socrates would really have advanced in the argument on justice as far as the conclusion of the first book of *Republic.* For the development of the later theory he perhaps furnished hints and indications which Plato understood and seized, and buried in
his mind. Thence by degrees they grew up into something
in different from what Socrates had consciously attained to.
The dialectic of Socrates had an element in common with
that of the Sophists, namely, it disturbed the popular con-
ceptions on moral subjects. It had this different from them,
and which constituted its claim to be not merely a destructive,
but also a constructive method—it always implied (1) that
there was a higher and truer conception to be discovered by
thought and research; (2) it seized upon some permanent
and universal ideas amidst the mass of what was fluctuating
and relative; (3) it left the impression that the most really
moral view must after all be the true one.

The many-sided life of Socrates gave an impulse, as is well
known, to a variety of schools of philosophy. It is usual to
divide these into the imperfect and the perfect Socraticists;
the Megarians, who represented only the dialectic element in
Socrates, and the Cynics and Cyrenaics, who represented each
a different phase of his ethical tradition, being considered as
the imperfect Socraticists; and Plato being esteemed the full
representative and natural development of all sides of his
master's thought. Plato is so near to Aristotle, and is such a
world in himself, that we may well leave his ethical system
in its relation to Aristotle for separate consideration. An
account of the Megarian school belongs rather to the history
of Metaphysics. The Cynics and Cyrenaics then alone remain
to be treated of in the present part of our sketch of the pre-
Aristotelian morals.

The Cynical and Cyrenaic philosophies were each, as has
been remarked, rather a mode of life than an abstract theory
or system. But as every system may be regarded as the
development into actuality of some hitherto latent possibility
of the intellect, so these modes of life may be regarded each
as the natural development of a peculiar direction of the
feelings. Nor do they fail to reproduce themselves. That attitude of mind which was exhibited first by Antisthenes and Diogenes has since been over and over again exhibited, with superficial differences, and in various modifications by different individuals. And many a man has essentially in the bias of his mind been a follower of Aristippus. Each of these schools was an exaggeration of a peculiar aspect of the life of Socrates. If we abstract all the Platonic picture of the urbanity, the happy humour, and at the same time the sublime thought of Socrates, and think only of the barefooted old man, indefatigably disputing in the open streets, and setting himself against society, we recognise in him the first of the Cynics. Again, if we think of him to whom all circumstances seemed indifferent, who spoke of virtue as the science of the conduct of life, and seemed at times to identify pleasure with the good, we can understand how Aristippus, the follower of Socrates, was also founder of the Cyrenaic sect. Several points these two opposite schools seem to have had in common. (1) They started from a common principle, namely, the assertion of the individual consciousness and will, as being above all outward convention and custom, free and self-responsible. (2) They agreed in disregarding all the sciences, which was a mistaken carrying out of the intentions of Socrates. (3) They stood equally aloof from society, from the cares and duties of a citizen. (4) They seem both to have upheld the ideal of a wise man, as being the exponent of universal reason, and the only standard of right and wrong. This ideal was no doubt a shadow of the personality of Socrates. We find a sort of adaptation of it by Aristotle in his *Ethics* (II. vi. 15), where he makes the *φρόνιμος* to be the criterion of all virtue. The same conception was afterwards taken up and carried out to exaggeration by the Roman Stoics.

Cynicism implies sneering and snarling at the ways and
institutions of society; it implies discerning the unreality of
the shows of the world and angrily despising them; it implies
a sort of embittered wisdom, as if the follies of mankind were
an insult to itself.

We may ask, How far did the procedure of the early Cynics
justify this implication? On the whole, very much. The
anecdotes of Antisthenes and Diogenes generally describe
them as being true 'Cynics,' in the modern sense of the word.
Their whole life was a protest against society: they lived in
the open air; they slept in the porticos of temples; they
begged; Diogenes was sold as a slave. They despised the
feelings of patriotism: war and its glory they held in repug-
nance; 'Thus freed,' says M. Renouvier, 'from all the bonds
of ancient society, isolated, and masters of themselves, they
lived immovable, and almost divinised in their own pride.'
Their hard and ascetic life set them above all wants. 'I
would rather be mad,' said Antisthenes, 'than enjoy pleasure.'
They broke through the distinction of ranks by associating
with slaves. And yet under this self-abasement was greater
pride than that against which they protested. Socrates is
reported to have said, 'I see the pride of Antisthenes through
the holes in his mantle.' And when Diogenes exclaimed,
while soiling with his feet the carpet of Plato, 'Thus I tread
on Plato's pride,' 'Yes,' said Plato, 'with greater pride of
your own.' The Cynics aimed at a sort of impeccability; they
were equally to be above error and above the force of
circumstances. To the infirmities of age, and even to death
itself, they thought themselves superior; over-doing the
example of Socrates, they resorted to a voluntary death when
they felt weakness coming on, and such an act they regarded
as the last supreme effort of virtue. As their political theory,
they appear to have maintained a doctrine of communism.
This seems to have been extended even to a community of
wives,—a point of interest, as throwing light upon the origin of Plato's ideal Republic. Such notions may really have been to some extent entertained by Socrates himself. At all events we find them in one branch of his school. A life like that of the ancient Cynics presents to us a mournful picture, for we cannot but deplore the waste of so much force of will, and that individuals should be so self-tormenting. The Cynic lives by antagonism; unless seen and noticed to be eccentric, what he does has no meaning. He can never hope to found an extended school, though he may be joined in his protest by a few disappointed spirits. In the Cynical philosophy there was little that was positive, there was hardly any contribution to Ethical science. But the whole Cynical tone which proclaimed the value of action and the importance of the individual Will was an indication of the practical and moral direction which thought had now taken, and prepared the way for the partial discussion of the problems of the Will in Aristotle, and for their more full consideration among the Stoics. Crates, the disciple of Diogenes, was the master of Zeno.

Personally, the Cyrenaics were not nearly so interesting as the Cynics. Their position was not to protest against the world, but rather to sit loose upon the world. Aristippus, who passed part of his time at the court of Dionysius, and who lived throughout a gay, serene, and refined life, avowed openly that he resided in a foreign land to avoid the irksomeness of mixing in the politics of his native city Cyrene. But the Cyrenaic philosophy was much more of a system than the Cynic. Like the Ethics of Aristotle, this system started with the question, What is happiness? only it gave a different answer. Aristotle probably alludes to the philosophy of Aristippus amongst others, in saying (Eth. 1. viii. 6), 'Some think happiness to consist in pleasure.' But it has been
observed that he chooses not Aristippus, but Eudoxus, as the representative of the doctrine formally announced, that ‘pleasure is the Chief Good’ (Eth. i. xii. 5, x. ii. 1.) This points to the fact that Aristippus did not himself entirely systematise his thoughts. He imparted them to his daughter Arete, by whom they were handed down to her son, the younger Aristippus (hence called μητροδιδακτος), and in his hands the doctrines appear first to have been reduced to scientific form. If then we briefly specify the leading characteristics of the Cyrenaic system, as it is recorded by Diogenes Laertius, Sextus Empiricus, &c., it must be remembered that this is the after growth of the system. But though we cannot tell to what perfection Aristippus himself had brought his doctrines, there are many traces of their influence in the Ethics of Aristotle.

Cyrenaic morals began with the principle, taken from Socrates, that happiness must be man’s aim. Next they start a question, which is never exactly started in Aristotle, and which remains an unexplained point in his system, namely, ‘What is the relation of the parts to the whole, of each successive moment to our entire life?’ The Cyrenaics answered decisively, ‘We have only to do with the present. Pleasure is μονόχρονος, μουσια, an isolated moment, of this alone we have consciousness. Happiness is the sum of a number of these moments. We must exclude desire and hope and fear, which partake of the nature of pain, and confine ourselves to the pleasure of the present moment.’

In this theory it must be confessed that there is considerable affinity to Aristotle’s doctrine of the τὸλος; and some have thought that Aristotle alludes to Aristippus (Eth. x. vi.

---

60 Here we trace something similar to the doctrine of Aristotle, that ‘Pleasure is like a monad, or a point, complete in itself, perfect without relation to time’ (Eth. x. iv. 4).
3–8), where he argues that amusement cannot be considered a τέλος (cf. Politics, viii. v. 13). In short, the τέλος of Aristotle is only distinguished from the μονόχρονος ήδονή of Aristippus by the moral earnestness which characterises it. The Cyrenaics further asking, What is Pleasure? answered by making three states of the soul possible; one, a violent motion, or tempest, which is pain; another, a dead calm, which is the painless, or unconscious state; the third, a gentle, equable motion, which is pleasure. Pleasure was no negative state, but a motion. This doctrine seems to be alluded to in the Philebus of Plato (p. 53 C).61 where Socrates, in arguing against the claims of pleasure to be the chief good, returns thanks to a certain refined set of gentlemen for supplying him with an argument, namely, their own definition of pleasure, that it is not a permanent state (οὐσία), but a state of progress (γένεσις). It is generally thought that the Cyrenaic school are here meant. In the Eudemian book (Eth. vii. xii. 3), there appears to be another allusion to this same definition, in a way which, without some explanation, it is excessively hard to understand. Eudemus in discussing pleasure, says, ‘Some argue that pleasure cannot be a good, because it is a state of becoming’ (γένεσις). He afterwards denies that pleasure is a γένεσις, except in certain cases. And then he proceeds to explain how it was that pleasure came to be called a γένεσις. He says62 ‘it was from a confusion between the terms γένεσις and ἔνεργεια,—it was thought to be a γένεσις, because essentially a good, to express which the term ἔνεργεια would have been appropriate.’ At

61 Ἀρα περὶ ἡδονής οὐκ ἀκρολάμεν ὅσι ἡ γένεσις ἐστιν, οὐσία δὲ οὐκ ἐστι τὸ παράκεν ἡδονής; καὶ οὐ ὅρα δὲ 

62 Eth. vii. xii. 3. Ποικίλη ἡ γένεσις τις εἶναι, δι’ οὑσίαν ἀγαθόν. τὴν γὰρ ἔνεργειαν γένεσιν δύονται εἶναι, ἐστι γὰ 

ετέρων.
first sight it appears a strange contradiction to say pleasure is thought not to be a good, because it is a γένεσις; it is thought to be a γένεσις, because it is good. The explanation is, that the two clauses do not refer to the same set of opinions. The former part refers to the Platonists, who argued, as in the Philebus, against pleasure, because it was not a permanent state; the latter part refers to the definition of the Cyrenaics, that pleasure is a state of motion, or, as it is here called, a γένεσις. It is obvious that the Cyrenaic definition of pleasure, as far as we are aware of it, will not bear a comparison, as a scientific account, with the theory of Aristotle. Aristippus appears to have made the senses the only criterion of pleasure, and pleasure, again, the measure of actions. All actions, in themselves indifferent, were good or bad according to their results, as tending or not tending to pleasure. The Cyrenaics, however, adapting themselves to circumstances, allowed that their wise man would always maintain an outward decorum in obedience to established law and custom.

The selfishness of this system at once condemns it in our eyes. For even acts of generosity and affection, according to such a system, though admitted by it to be excellent, are excellent only on this account, because, by a reflex power, they occasion pleasure to the doer. What in other systems is only concomitant to good acts is here made the primary motive, by which all morality is debased. The maintainers of such a philosophy are, perhaps, half-conscious to themselves that it never can be generally applicable, that they are maintaining a paradox. Looked into closely, this is seen to be a philosophy of despair. Those who cannot put themselves into harmony with the world, who cannot find a sphere for any noble efforts, nor peace in any round of duties, who have no ties and no objects, may easily, like Horace, 'slip back into the doctrines of Aristippus.' The profound joylessness which
there is at the core of the Cyrenaic system showed itself openly in the doctrines of Hegesias, the principal successor of Aristippus. Hegesias, regarding happiness as impossible, reduced the highest good for man to a sort of apathy; thus, at the extremest point, coinciding again with the Cynics. It is instructive to see the various points of view that it is possible to take with regard to life. In the Cyrenaic system we find a bold logical following out of a particular view. In this respect the system is remarkable, for it is the first of its kind. The Sophists had trifled with such views, and not followed them out. In the prominence given to the subject of pleasure, in the Ethical systems both of Plato and Aristotle, we may trace the effects of the Cyrenaic impulse.
ESSAY III.

On the Relation of Aristotle's Ethics to Plato and the Platonists.

We have already traced in outline the characteristics of moral philosophy in Greece down to the death of Socrates, and have made brief mention of two of the schools of 'one-sided Socraticists,' as they have been called, the Cynics and Cyrenaics. It remains to resume the thread of the progress of ethical thought in Plato, compared with whom all previous philosophers sink into insignificance. In him all antecedent and contemporary Greek speculation is summed up and takes its start afresh. Especially in relation to any part of the system of Aristotle, a knowledge of Plato is of the greatest importance. To explain the relation of any one of Aristotle's treatises to Plato is almost a sufficient account of all that it contains. If one were asked what books will throw most light upon the Ethics of Aristotle, the answer must be undoubtedly, 'the Dialogues of Plato.'

These Dialogues represent the successive phases, during a long life, of a mind pre-eminently above all others rich in philosophic thought and suggestion. In many respects they are totally unlike the works of Aristotle. For, instead of being written all together as the mature result of enquiries long previously made and of conclusions gradually obtained and stored up, they were thrown out from time to time, be-
ginning with Plato's early youth, just as poems are thrown out to relieve the mind of the poet. And in another respect also they were like poems, for in them form was always considered of coequal importance with matter; not only in style were they consummate masterpieces of writing, but also they had this note of poetry—that each part of them was treated as an end in itself and yet was duly subordinated to the whole, and they were thus perfect works of art. Being written from time to time they reflected the gradual growth and alteration of Plato's own mind, as well as the different influences of philosophy to which he was successively subjected. The earlier dialogues, such as *Charmides*, *Laches*, *Lysis*, &c., exhibit a simple Socratic dialectic, by which the ordinary views of moral subjects are shown to be insufficient, and more adequate definitions are sought for, but not enunciated. Afterwards, as in *Phaedrus* and *Republic*, a Pythagorean influence manifests itself; a delight in the symbolism of numbers appears, and the doctrine of the transmigration of souls plays an important part. Then again, as in *Parmenides*, *Theaetetus*, and *Sophistes*, a Megarian or Eleatic influence is perceptible, and the most abstract conceptions of Being are discussed. Thus the dialogues contain many varieties of the point of view, and even many inconsistencies. These incongruities, however, such as they were, were veiled and mitigated, first by the dramatic form into which everything was thrown, and by which only the views of the speakers for the time being seemed to be guaranteed, and secondly by the graceful absence of dogmatism in the Platonic Socrates, the chief personage in most of the dialogues. A common spirit, however, is plainly discernible through the whole; and, for the rest, the dialogues of Plato show us the progress of a philosophic mind, of an enquiring spirit, of a great original
genius struggling with unequal conditions of knowledge. If we ask, At what point of his fifty years of authorship was Plato most himself? In which of the dialogues can we put our finger on the most essential features of his philosophy?—the answer must be, Nowhere and everywhere. Plato is to be regarded as a dynamical force, rather than as the setter forth of a system; and in modern times we may feel that to imbibe, if possible, his spirit, is of more value than to garner his conclusions. But the reason why we can now afford to be comparatively indifferent to the conclusions of Plato upon particular points,—is, that these conclusions have become incorporated, so far as they were valid, in the thought of Europe. And they became so incorporated through having been gathered up and stated afresh by Aristotle, who was Plato's lineal successor in the history of Philosophy, though not so in the leadership of the Academic School.  

1 The dialogues of Plato translated into English, with analyses and introductions, by B. Jowett, M.A., Master of Balliol College, &c. (Oxford, 1871), Preface, p. ix. Prof. Jowett says of Plato (ib.) 'We are not concerned to determine what is the residuum of truth which remains for ourselves. His truth may not be our truth, and nevertheless may have an extraordinary value and interest for us.'

2 Valentine Rose, De Aristotelis Librorum Ordine et Auctoritate (Berlin, 1854), p. 112, impugns as a fiction the statement of Apollodorus (apud Diog. Laert. see above, page 2) that Aristotle was the pupil of Plato for twenty years. The grounds of this scepticism are (1) that Aristotle would have been more thoroughly Platonised had the statement been true; (2) that the roundness of the number has a suspicious appearance. Such reasons are quite insufficient. It is consistent with all known facts to believe that Aristotle was Plato's pupil, but that he gradually asserted the independence of his own mind, and declared a dissent from and a polemic against some of the metaphysical views entertained by Plato's school, and thus was passed over in the election of a Scholarch for the Academy, on Plato's death. This led to Aristotle's leaving Athens for a time, and afterwards setting up in the peripatus, or covered walks, of the Lyceum his own separate school, which hence got the name of Peripatetic. These details perhaps cannot be proved; but we know one thing for certain,—that almost every page of Aristotle's Logical, Rhetorical, Ethical, Political, and Metaphysical writings bears traces of a relation to some part or other of Plato's dialogues.
rich and manifold contributions to logic, psychology, metaphysics, ethics, politics, and natural religion (so many of which have become part of the furniture of our every-day thoughts), were too much scattered up and down in his works, too much overlaid by conversational prolixity, too much coloured by poetry or wit, sometimes too subtly or slightly indicated, to be readily available for the world in general, and they thus required a process of codification. Aristotle, with the greatest gifts for the analytic systematising of philosophy that have ever been seen, unconsciously applied himself to the required task. He treated the Platonic dialogues as quarries out of which he got the materials wherewith to build up in consolidated form all the departments of thought and science so far as they could be conceived by an ancient Greek. He thus codified Plato, and translated him into the prose of dogmatic theory, at the same time that he carried further and completed many of his results and suggestions. It must be confessed that he did all this somewhat ungraciously, seeming to dwell by preference on the differences of view between Plato and himself; and he did it, as we have said, unconsciously—apparently not perceiving how much the substance of his own thought, in all his non-physical enquiries, was derived from Plato and only re-stated and carried out by himself. Aristotle, however, was the natural complement of Plato, as Plato was the complement of Socrates; and it is to a considerable extent through Aristotle that 'the residuum of truth' in Plato has already become part of the thought of the world. The attitude and aims of the two writers were, of course, different, for, while Plato was a Dialectician and a Poet, Aristotle aimed especially at being a man of Science,—at collecting all that could be known on each subject, and stating it in the most precise terminology. Each of the two had his own peculiar earnestness: Plato's was a
moral earnestness, he seems never to have lost out of sight the overwhelming importance of everything by which the human soul might be improved or deteriorated; Aristotle's was a scientific earnestness, showing itself in a desire to sift and examine everything and to state the naked truth, as it appeared to him, regardless of consequences. 3

Plato as the successor of Socrates appears to have carried forward all the many-sided tendencies of his master. By imagining Socrates still on earth, and in perpetual conversation on the highest subjects, Plato developed the different phases of his own idealistic philosophy. But at present we are only concerned with the ethical portion of this; the question is, What contribution did Plato make to the growth of moral theory in Greece? We must conceive him starting with the results at which Socrates had arrived: namely, that in the affairs of human life it is absolutely necessary to obtain universal conceptions; that, to arrive at these a suitable dialectic, and the refutation of inadequate notions, are requisite; and that it is the general outcome of all such enquiries to show that 'Virtue is a science.' Now, the course which Plato seems to have followed was, to take up these principles and see how they were to be reconciled with the current ideas of Greek morality. If there be four cardinal virtues, Wisdom, Temperance, Courage, and Justice, how do these stand related to the doctrine that 'Virtue is a science'? Is each of them a science, and how? Or, if virtue is one, how are these sepa-

3 Plato's deep feeling of the importance of morality cannot be properly indicated by a few references, but see Prof. Jowett's Introductions to his Translations of the dialogues, passim. Aristotle's keenness for the hard and precise truth may be illustrated by Eth. i. vi. 3, ἀδικεῖν ὑπὸ τοῦ ἔννοιαν βλέπον ἐναὶ καὶ δεῖν ἐκεῖ ὑπηρετεῖν ἐν τῆς ἀλήθειας καὶ τὰ οἰκεῖα ἀναπερίπ. Eth. x. i. 3, where he blames those who from moral good intentions have pronounced Pleasure to be evil, Politics, i. viii. 1, where he says of a particular question — ἐχεῖ τινὰς ἀποφασις, τῷ δὲ περὶ ἐκείνην μέθοδον φιλοσοφοῦσιν καὶ μὴ μόνον ἀπο- βλέποντι πρὸς τὸ πρῶτον οἰκεῖον ἀτι- τό ὑπὲρ των μηδὲ τι καταλέπτειν.
rate names to be accounted for? Again, if Virtue is a science, can it be taught? Furthermore, if Virtue is a science, then does it not follow that Vice is ignorance? From which, as no one can be blamed for errors committed in ignorance, it would result that no man is willingly bad. These are the problems which, arising out of the Socratic principles, Plato had to encounter, and he discusses them directly in Protagoras, Gorgias, Meno, and Republic; less directly and incidentally they are touched upon in many of the other dialogues. In order to find an answer to them Plato called in the aid of Psychology, and he was thus the first to propose for ethics a psychological foundation. In Republic, in answer to the question, 'What is Justice?' he sets himself to construct an elaborate system of individual ethics, by means of an analogy drawn between the human soul and an ideal city. And the foundation of this analogy is made to consist in a division of the soul into Reason, Spirit (θυμός), and Desire, answering to the three ranks of the rulers, the soldiers, and the working classes. This psychological division, rudimentary as it may now appear, was an important contribution towards the scientific theory of morals. One immediate result of the division was to lead Plato to distinguish Wisdom from the other cardinal virtues, and to put it into a class by itself. Wisdom, or Thought on moral subjects (φρόνησις) evidently enters as a guiding principle into all the other virtues; none of them can exist without it. And, on the other hand, this quality, when looked at more closely, is found to be identical with one of the tripartite divisions of the soul; it is Reason itself, an intuitive faculty, not admitting of degrees, possessed by all men, but yet capable of misdirection, obscuration, and

*4 See Essays on the Platonic Ethics, by Thomas Maguire, LL.D., &c. (Dublin, 1870), p. 36. Dr. Maguire in these Essays has well discussed the subject of the present pages.*
eclipse. Hence comes one answer to the question, Is Virtue teachable? The Virtue of Wisdom, or Thought, is not; the other Virtues are. This conclusion is stated in Republic vii. p. 518 C—E. Where ἑρωντής is called 'the eye of the soul,' which only requires to be directed aright. 'And hence,' it is said, 'while the other qualities (i.e. Courage, Temperance, and Justice) seem to be akin to the body, being infused by habit and exercise and not originally innate, the virtue of wisdom is part of a divine essence, and has a power which is everlasting, and by this conversion is rendered useful and profitable, and is also capable of becoming hurtful and useless. Did you never observe the narrow intelligence flashing from the keen eye of a clever rogue—how eager he is, how clearly his paltry soul sees the way to his end; he is the reverse of blind, but his keen eyesight is taken into the service of evil, and he is dangerous in proportion to his intelligence?—Very true he said.—But what if there had been a circumcision of such natures in the days of their youth; and they had been severed from the leaden weights, as I may call them, with which they are born into the world, which hang on to sensual pleasures, such as those of eating and drinking, and drag them down and turn the vision of their souls about the things that are below—if, I say, they had been released from them and turned round to the truth, the very same faculty in these very same persons would have seen the other as keenly as they now see that on which their eye is fixed.' In this passage is also indicated the relation of at least one other of the cardinal virtues, namely Temperance, to the virtue of Wisdom or Thought. 'Had sensual indulgence,' says Plato, 'been checked in many a man when he

--

* See Dr. Maguire's Essays, p. 14.
was young, his innate divine power of thought would have turned round to the idea of the Good, instead of fastening itself upon evil.' Thus Temperance conserves Wisdom, and is a necessary condition to it. But Courage, according to Plato, is steadiness not only in the face of danger, but also in the face of pleasure and temptation (Laws, p. 613; D, E), therefore this quality also must play a similar part with Temperance in preventing the disturbance and misdirection of Thought. But these qualities, however, while they are means and conditions to the proper functions of Thought, derive all their ethical value from Thought itself, and without it would be mere blind instincts towards the good, or would be the result of worldly and non-moral motives (Phaedo, p. 68, d). Thus the three cardinal virtues, Wisdom, Temperance, and Courage, instead of standing apart, as in the popular Greek notion of morality, are found mutually to imply one another, and to grow together into one whole. And this whole may be called Virtue, or, to use the language of Plato's Republic, it may be figured as Justice,—that quality which in the individual soul is analogous to a perfectly wise 'division of labour' in a state,—in other words supreme regularity, good order, and sanity, reigning over all the functions of the individual soul. Such, in the barest outline, was Plato's moral scheme, but, even as thus stated, we can see how much deeper it was than anything which had preceded it in Greece; how, following the Socratic direction, it discarded as inadequate such definitions of Justice as 'giving all men their due,' or of Courage as 'willingness to go forward in battle;' how it looked alone to the internal motive of each quality, and in so doing discovered its necessary relation to all the various parts of the soul, and thus expanded the conception of Virtue as a science into that or Virtue as a harmony of the appetitive and emotional im-
pulses under the direction of Reason or Thought, which they at once obeyed and supported.

But yet, according to Plato, Virtue is always coincident with Knowledge; it implies the choice of the higher pleasures and of that course to which the balance of advantages inclines. To act otherwise than in accordance with the balance of advantages, is to act as Ignorance would prompt. And no one, except in error and through Ignorance, chooses evil in place of good. 'Ignorance,' however, does not mean the mere negative absence of knowledge; it means, as explained by Plato in this context, rather something positive — 'the influence of any opinion or impression which is at variance with the ultimate reality,' — any disturbing influence which may tend to weaken the force of ulterior interests — 'all sentiments, passions, and emotions which lead us to put out of sight the consideration of our permanent interest.' With this proviso it is maintained that no wrong action is due except through Ignorance; and, as it is emphatically stated in Laws, p. 860 C, 'All bad men are always involuntarily bad.' But this is no fatalistic view of life. Unjust men would not have been unjust, as we have already seen, if early good habits had given its proper scope to the innate vision of their souls. And in succeeding pages of Laws it is shown that Legal Punishments must take their course with such men, as a reformatory and curative process for themselves, and as a vindication of those whom they have injured. Plato's theory of Punishment is essentially the corrective theory—that punishment is for the good of the person punished. But in his pictures* of the future life, drawn under Pythagorean influences and no doubt partly

---

derived from Pindar (see above, page 97), Plato indicates three possibilities for the individual soul,—either eternal blessedness for those who have been purified by virtue and philosophy; or, a state of purgatory, to be followed by metempsychosis and a fresh probation on earth; or, for some, final condemnation without further hope of redemption. He conceives that the sentence of eternal punishment would be the fate of those great malefactors of mankind, such as the worst tyrants and other utterly lawless spirits, who should have rendered themselves incurable and incapable of improvement. This belief adds force to the consideration of the great importance of habits in the soul, for it supposes that the immortal soul by evil habits can become degraded past the possibility of improvement. It is then figured that eternal retributive punishment, as a warning to others, would become its lot. Though Plato does not make the details of his Eschatology necessary matters of faith, and by no means wishes (like a modern divine) to order the whole of life in reference to them, yet still the belief in the immortality of the soul was deeply rooted in his mind, and was variously expressed in different parts of his writings. He connected it with the metaphysical priority of Reason to Matter, and also with the grave importance of Morals. He pictured the whole of life as an education, and sometimes spoke of education as a process only begun in this life and to be carried on in a subsequent state of existence (see Republic, p. 498 D—E). All this gave greatness and depth, and a human interest valid for all times, to the ethical scheme of Plato.

* See Phaedo (p. 114 E). 'I do not mean to affirm that the description which I have given of the soul and her mansions is exactly true; a man of sense hardly ought to say that. But I do say that, inasmuch as the soul is shown to be immortal, he may venture to think, not improperly or unworthily, that something of the kind is true.' Prof. Jowett's Translation, vol. i. p. 465.
The works of Aristotle, that is to say those that we possess, were probably all composed between fourteen and twenty-seven years after the death of Plato. If Plato could have come to life again and seen these works, he would have found philosophy all mapped out and divided into separate branches, and great analytic clearness thus imparted to the whole; he would have found a settled philosophical terminology employed throughout,—in many cases words that he had himself been in the habit of using in an ordinary way, now restricted and limited in their connotation and made technical terms of logic or metaphysics—10—in other cases new and somewhat uncouth terms that had been introduced by Aristotle 'for the sake of precision'; and he would have found manifold suggestions of his own on all the different subjects of philosophy taken up and in many cases made more definite and carried out, so that a concentrated essence of many of his own thoughts, stated in widely different form from his own, would have been presented to his view. If we might go on indulging this fancy, it would be not unnatural to conceive that Plato, with his great candour and breadth of mind, would have acknowledged with admiration the additions to knowledge and thought which in many respects had been made by Aristotle, but that he also would have felt (even setting aside the somewhat captious antagonism to himself which occasionally appeared) that something had been lost, as well as gained, to Philosophy by the rigidly analytic method of his successor.

Taking now the unfinished (or mutilated) Ethics of Aristotle, with their Peripatetic complement, Books V., VI., and

10 As for instance, συλλογισμός, which merely meant ‘computation’ with Plato; προσαρκεία = a ‘preference’; δύναμις = ‘power,’ &c.

11 Cf. Eth. ii. vii. 11. πεπιστέουν ὅνοματον σοφικάς ἔνεκε. The result was—terms like ἀντιλήψις, or forms like τὸ τί ἡν ἐστὶ.
VII., we shall find that they abundantly illustrate the conception just given of the relation of Aristotle’s works in general to Plato. In order to see at a glance how much of the substance of this treatise is taken from, or suggested by, the Platonic dialogues, let us synoptically enumerate, and then add a few remarks upon, the following heads: (1) The conception of moral science as a whole,—that it is a sort of Politics which is the science of human happiness. (2) The conception of the practical Chief Good,—that it is τέλειον and αὐταρκεία and incapable of improvement or addition. (3) The conception that man has an ἴργυς or proper function, that man’s ἀρετή perfects this, and that his well-being is inseparable from it. (4) The conception of Psychology as a basis for Morals. (5) The doctrine of Μετριότης, which is only a modification of the Μετριότης of Plato. (6) The doctrine of Φρονμεία, which is an adaptation, with alterations, of the Socratico-Platonic view. (7) The theory of Pleasure, its various kinds, and the transcendency of mental pleasures. (8) The theory of Friendship, which is suggested by questions started, but not answered, in the Lysis of Plato. (9) The Agyiolojy, or theory of Ignorance, in Book VII.,—to explain how men can act against what they know to be best,—which appears to have been considerably suggested by Platonic discussions. (10) The practical conclusion of Ethics—that Philosophy is the highest good and the greatest happiness, being an approach to the nature of the Divine Being. On these separate heads we may remark:—

(1) Not only is the general point of view—that the individual is inseparable from the state—taken from the Republic of Plato, but also the special description of Politics as the science of human happiness appears unmistakably borrowed from the Euthydemus. It is interesting to compare the conception of Politics, and its relation to the sciences, which
is expressed in *Eth. i. ii. 5–6*, with the following description (*Euthydem. p. 291B*):—ἐπὶ δὲ δὴ τὴν βασιλικὴν ἠλθώντες τέχνην καὶ διασκοπούμενοι αὐτὴν, εἰ αὐτὴ εἶναι ἢ τὴν εὐδαιμονίαν ἀπεργαζομένη—ἔδοξε γὰρ δὴ ἦμαν ἡ πολιτική καὶ ἡ βασιλικὴ τέχνη ἢ αὐτὴ εἶναι.—ταύτη τῇ τέχνῃ ἡ τε στρατηγικὴ καὶ αἱ ἄλλαι παραδίδοναι ἀρχές τῶν ἔργων, ὃν αὐτᾶ τῆς δημιουργίας εἶναι, ὥσπερ ἐπισταμένη χρήσιμα. σαφῶς οὖν ἔδοξε ἦμαν αὐτὴ εἶναι, ἣν ἐξητούμεν, καὶ ἢ αὐτὰ τοῦ ὑθῶν πράττειν ἐν τῇ πόλει, καὶ ἀνεχθῆς κατὰ τὸ διάχυσιν ἰσμεῖον μόνη ἐν τῇ ἐπιμεληθείς καθήσαι τῆς πόλεως, πάντα κυβερνῶσα καὶ πάντων ἄρχουσα πάντα χρήσιμα ποιῶν. While, however, accepting this conception of Politics, Aristotle does so in a wavering way—he says that his science will be 'a sort of Politics' (*πολιτικὴ τις, Eth. i. ii. 9*); as elsewhere he had spoken as if it were rather a stretch to call the science of moral subjects Politics.\(^{13}\) He treats Ethics in such a way as virtually to separate them from Politics, a separation which was completed by the Peripatetic School and by the Stoics.

(2) In *Eth. i. vii. 3–6*, Aristotle, in laying down his own conception of the chief good, which is to be the ἀρχή for Ethics, says that it must be τέλειον and αὐταρκῆ. These same qualities are attributed to the chief good in the *Philebus* (p. 20C), a dialogue to which Aristotle seems often to refer, and from which the present doctrine is probably taken. The words are as follows:—τῆν τάγαθον μοίραν πότερον οἰκίη τέλεων ἢ μὴ τέλεων εἶναι; πάντων δὴ ὑπὸ τελεώτατον, ὁ Ἱσόκρατες. τῷ δὲ; ἱκάνον τάγαθόν; πῶς γὰρ ἤν; κ.τ.λ. It is to be observed, however, that Aristotle analyses the term τέλειον, and gives it a more philosophical import than Plato had done. Plato probably meant nothing more than 'the perfect.'

\(^{13}\) *Eth. i. ii. 7. Τῆς περὶ τὰ ὡς πραγματείας ἢν δίκαιον ἐστὶν προσεγερεῖν πολιτικήν.*
Aristotle analyses this into 'that which was never a means,' 'that which is in and for itself desirable.' He accepts also from the Philebus another doctrine, which is the corollary of the former, namely, that the chief good is incapable of addition. He directly refers to the Philebus, Eth. x. ii. 3, saying, 'Plato used just such an argument as this to prove that pleasure is not the chief good—for that pleasure, with thought added to it, is better than pleasure separately; whereas, if the compound of the two is better, pleasure cannot be the chief good; for that which is the absolute chief good cannot be made more desirable by any addition to it. And it is obvious that nothing else can be the chief good, which is made better by the addition of any other absolute good.' The reference is to Philebus, pp. 20–22. Aristotle implies the same thing, Eth. i. vii. 8, by saying that, 'When we call happiness the most desirable of all things, we can only do so on the proviso that we do not rank it with other goods, and place it in the same scale of comparison with them' (μὴ συναρμολογημένη, see infra, note on this passage); 'else we should come to the absurdity of considering it capable of improvement by the addition of other goods to it, which, if we consider it as the ideal good for man, is impossible.'

(3) The whole argument by which, from the analogy of the different trades, of the different animals, and of the separate parts of the body, the existence of an ἔργον or proper function for man is proved (Eth. i. vii. 11) comes almost verbatim from the Republic (p. 352–3); as also does the account of the connection between the ἀπερίμετρος of anything with its proper function, which is given Eth. ii. vi. 2. The object selected as an illustration is in each case the same—namely, the eye.\[\text{\textsuperscript{13}}\]

\[\text{\textsuperscript{13}}\] Cf. Republic, p. 353 B. "Αρ' ἀν ποτε ἄρματα τὸ ἀνθίων ἔργον καὶ ποτὲ ἀπερίμετρος τῆς ἀνθίων ἔρκειαι ἀπερίμετρος; κ.τ.λ."
(4) The psychology of Aristotle's *Ethics* is based on that of Plato, but it is also a development of it, and contains one essential difference, in the greater prominence, namely, that is given to the will. This, it is true, is virtual rather than expressed, but it lies at the root of the separation of 'practical virtues' from philosophy, and from 'excellences of the reason.' Plato divides the mind into the following elements: —τὸ λογιστικόν, τὸ ἐπιθυμητικόν, τὸ θυμοειδές (*Rep.* p. 440). Aristotle gives a more physical account of the internal principle (see below, Essay V.), and divides the mind into that which possesses reason and that which partakes of reason. This answers at first sight to the division of Plato, since the λόγον μετέχον includes both θυμὸς and ἐπιθυμία. But Aristotle pushes the analysis farther, dividing the reason into practical and speculative (which is a great discrepancy from Plato), and not attributing the same separate and important character to θυμὸς as it has in the *Republic*, where it is made to stand for something like the instinct of honour, or the spirited and manly will, which, as Plato says, is generally on the side of the reason in any mental conflict. In Aristotle's discussions upon βουλήσεις, βουλευεις, &c., we see an attempt to found a psychology of the will, thus supplying what was a deficiency in Plato, but the theory does not appear to be by any means complete.

(5) The principle of *Mesorótēs*, so prominent in Aristotle's theory of moral virtue, is a modification of Plato's principle of *Metairotēs* or Συμμετρία. As, however, the history of the doctrine of *Mesorótēs* will form part of the subject of the following essay, no more need at present be said upon it.

(6) Aristotle's doctrine of *φρόνησις*, as far as we can understand it in the Eudemian exposition, which alone remains to

---

14 Δόγμα ἔχειν and λόγον μετέχον. *Eth.* i. xiii.
us, seems to be partly an adoption and partly a correction of a Socratico-Platonic doctrine of similar import. This doctrine, beginning with the form that 'Virtue is Knowledge (ἐπιστήμη), or Thought (φρόνησις),' and being afterwards developed by Plato into the form that 'Virtue is, or implies, Philosophy,' is accepted, with two corrections, by Aristotle. He denies the identification of 'Thought' with Virtue, saying instead—Virtue must 'be accompanied by' Thought; and he distinguishes and divides Thought or Wisdom (φρόνησις) from Philosophy (σοφία).

The former of these corrections was directed more against Socrates than against Plato; the latter, we shall see, is an important correction of the system of Plato, one that is connected with differences as to the whole view of Ethics. Plato speaks quite decisively of the necessity of φρόνησις to make moral action of any worth. In a celebrated passage of Theaetetus (p. 176 A), he says, 'We should strive to fly from the evil of the world; the flight consists in as far as possible being made like to God; and this “being made like” consists in becoming just and holy with thought accompanying' (όμοιωσις δὲ δικαιον καὶ δυναμεν μετὰ φρονήσεως γενέσθαι). In Phaedo (p. 69 B), he descants upon the worthlessness of moral acts if performed without φρόνησις; he says, 'Such virtue is a mere shadow and in reality a slavish quality, with nothing sound or true about it.' But a little further on (p. 79 D) he defines φρόνησις to be the contemplation of the absolute. We see then that Plato

12 Ἰφώσημα δὲ φρονήσεως καὶ ἀληθήματος ἀντὶ ἀλλήλων, μὴ σκιαγραφία τε ἢ τῶν αἵτων ὑποτήτων ἤτοί τε ἀνδροποδάθεσι τε καὶ οίδεν υἱής οἷον ἀληθές ἑξούσιον.

16 'Οταν δὲ γε αὐτὴ (ἡ φύσι) καὶ αὐτὴν σκοτεῖτ', ἔκεισε οἶχεται εἰς τὸ καθάρον τε καὶ δείλιν καὶ ἀθάνατον καὶ ὑπαθήν τὰ ἑξούσια, καὶ ὡσιγενής ὡδέα αὐτοῦ δείλιν ἔχειν τῷ γεγονεῖ, διακεκριμένη καὶ αὐτὴν γένοις καὶ ἑξούσιον ἄφθατο—καὶ τούτῳ αὐτῆς τὸ πάθημα φρόνησις κέκληται.
requires that every act should be accompanied by an absolute consciousness—and this absolute consciousness he does not separate from that which takes place in speculation and philosophy. The Peripatetic account is that a moral consciousness must accompany every act, a sort of wisdom which is the centre to all the moral virtues (Eth. vi. xiii. 6), but this kind of consciousness is quite distinct from the philosophic reason, it deals with the contingent and not with the absolute. The doctrine that Temperance preserves Thought (σωτήρ νήματυ φρόνημα, Eth. vi. v. 5) and that Thought without Virtuous habits may degenerate into cunning, is taken from Republic, p. 518 D, E (quoted above, p. 184).

(7) Of the two treatises on Pleasure contained in the Ethics of Aristotle, we may assume (see above, p. 64), that the one which appears in Book VII. is the work of Eudemus. It has then a totally different kind of interest from that in Book X. It illustrates, not so much Aristotle’s relation to Plato, as rather the growth of the Peripatetic school. It is in its main outline borrowed from the treatise in Book X., but it also contains some peculiarities belonging to the views of Eudemus, of which the chief are a practical, and at the same time a materialistic tendency. It is antagonistic to the views of ‘some’ who argued that no pleasure could be a good, because it is a state of becoming (γένεσις). This argument is refuted by Aristotle himself in Book X. Eudemus criticises and overthrows other arguments for the same position, not mentioned in Book X. None of these, however, are to be found in Philebus, or in any dialogue of Plato. They are, in all probability, to be attributed to the Platonic school. There is a direct mention, in connection with one of the arguments, of the name of Spensippus (Eth. vii. xiii. 1). Turning now to Book X., we find the question as to the nature of pleasure opened by the statement of two extreme views on the subject;
one, that of the Cynics—that pleasure was ‘entirely evil’
(κομιδὴ φαῦλον)—the other, that of Eudoxus, that pleasure
was the chief good. The first view Aristotle sets aside as
having rather a moral and practical than a speculative cha-
racter; and as being, though well-intentioned, at all events an
over-statement of the truth. He specifies four arguments of
Eudoxus to prove that pleasure is the chief good. (a) All crea-
tures seek it. (b) It is contrary to pain. (c) It is sought for its
own sake. (d) Added to any good, it makes that good better.
He then mentions the objections (ἐντολὰς) made to each of
these four, and shows that none of the objections is valid,
except that brought against the last of the arguments. He
shows from Plato (see above, p. 191), that the fact that
pleasure can be added to other goods disproves, instead of
proving, its claim to be considered the chief good. Aristotle
now mentions other general arguments that have been brought
against pleasure—namely, that it is not a quality: that it is
indefinite (ἀδυνατον); that it is a motion, a becoming, or a
replenishment (κίνησις, γένεσις, ἀναπλήρωσις); again, that
there are many disgraceful pleasures. He answers all these
objections, and having accepted the Platonic position that
pleasure is, at all events, not the chief good, he proceeds to
give his own theory of its nature, considering it to be, except
in certain cases, a good, and analysing its character more
accurately than had hitherto been done. In all this we can-
not trace anything like a direct antagonism to the _Philebus_
or to any other part of Plato’s works. Far rather, as we
shall have an opportunity of seeing more distinctly in the
next Essay, Aristotle, while perfectly coinciding with and
accepting Plato’s general theory of pleasure, the division of
its different kinds, the distinction between bodily pleasures
which are preceded by desire and a sense of pain, and the
mental pleasures which are free from this; while accepting,
that is, the whole theory in its moral and practical bearing, refines and improves upon it as a speculative question, substituting a more accurate and appropriate definition of pleasure than is to be found in Plato.

(8) We cannot doubt that Aristotle's attention was turned to the consideration of the subject of friendship by the importance that Plato attributed to it, and the interesting part which he makes it play in his system. Both Lysis and Phædrus are devoted to the discussion of friendship. In the former dialogue little more is done than starting the difficulties, some of which are taken up and restated in the beginning of Aristotle's treatise (Eth. viii. i. 6); 'Whether does friendship arise from similarity, or from dissimilarity? Does it consist in sympathy, or in the harmony of opposites?' In Phædrus a passionate and enthusiastic picture of friendship is given, which renders it not distinguishable from love; its connection with the highest kind of imagination, and with the philosophic spirit, is dwelt upon at length. In Aristotle nothing of this kind is to be discovered. The picture is colder, but at the same time more natural and human. In the ninth chapter of Book IX. a fine philosophic account of the true value of friendship is to be found, on which more will be said in the succeeding Essay. The whole of this subject is treated with depth and also with moral earnestness, which renders it one of the most attractive parts of Aristotle's Ethics. We see throughout that on every point of the question the analysis has been pushed farther than Plato carried it.

(9) The position that 'Virtue is a science' and that it is only through ignorance that a man could choose other than the Good, naturally gave importance to the question as to the nature of Ignorance itself, and the problem, How does it happen that knowledge of the Good is sometimes in abey-
ance? These questions which were suggested in *Protagoras* (pp. 358 sq.) appear to have been worked at in the Peripatetic school, and, with the help of the Practical Syllogism (see Essay IV.) an answer was given to them in the *Eudemian* Book VII. A cognate discussion, far less mature in character, on the voluntariness or involuntariness of Vice, entirely suggested by Plato, appears in Book III. of Aristotle's *Ethics*.

(10) The burden of all the Platonic dialogues is the same, the excellence of philosophy, and its extreme felicity. Most completely does Aristotle reproduce this feeling when (*Eth. x. vii.*) having, as it were, satisfied the claims of common life by his analysis of the 'practical virtues,' he indulges in his own description of that which is the highest happiness,—when he says, 'Philosophy seems to afford wonderful pleasures both in purity and duration' (*Eth. x. vii. 3*), and 'We need not listen to the saying, "Men should think humanly," rather as far as possible one should aspire after what is immortal, and do all things so as to live according to what is highest in oneself' (*Eth. x. vii. 8*). We are reminded generally of the enthusiastic descriptions of philosophy in the *Republic*, the *Phaedo*, and the *Symposium* of Plato. One particular passage of the last-named dialogue seems probably to have suggested to Aristotle the saying (*Eth. x. viii. 13*), that 'The philosopher will surely be most under the protection of heaven (θεοφιλάστατος), because honouring and cherishing that which is highest and most akin to God,—namely, the reason.'

Such are the leading ethical conceptions and topics for which Aristotle's treatise is manifestly indebted to the dialogues of Plato, and they go far towards furnishing its entire skeleton. But besides these there was many a minor suggestion of Plato's, which has been taken up into this work, as the notes in subsequent pages will testify. The very metaphors used by Aristotle seem often to have been inherited.
That of the 'bowmen' (Eth. i. ii. 2) occurs in Republic, p. 519 C. That of the 'Aristeia for pleasure' (Eth. i. xii. 5) comes from Philebus, p. 22 E. The analogy between the political philosopher and an oculist (Eth. i. xiii. 7) is from Charmides, p. 155 B. The comparison of mental extremes to excesses in gymnastic training (Eth. ii. ii. 6) occurs in Erastax, p. 134. The metaphor of 'straightening bent wood' (Eth. ii. ix. 5) is from Protagoras, p. 325 D. The comparison of those who have made their own fortune to poets and mothers, who love their offspring (Eth. iv. i. 20, ix. vii. 7), is from Republic, p. 330 C. This list of examples might doubtless be increased.

We have now seen the close connection of succession, inheritance, and development between the Ethics of Aristotle and the writings of Plato. It remains to point out the diversities of doctrine, as well as of tone and manner, which are also manifest between the moral systems of the two philosophers. At the very outset of his treatise, having started the question, What is the Good for man? Aristotle stops himself with the logical consideration that it will be necessary to enquire first the nature of this universal term—Good—and to state in what sense it is predicated, and what is its relation to the particulars which fall under it,\(^{17}\) 'although,' as he adds, 'an enquiry of this kind is rendered disagreeable owing to those who are our friends having introduced their doctrine of Ideas.' Adopting, however, a saying which Plato had himself employed in reference to judging of Homer,\(^{18}\) he decides that 'personal considerations must be sacrificed to

\(^{17}\) Eth. i. vi. 1. Ταύτα μὲν ὅπειραν δὲ ἑλθὼν: τὸ δὲ καθέναν βέλττον εἰσὶν ἐνεκτικόμεθα καὶ διαπορήσωμεν τῶν λέγε- 
και, κατέρ προσάντος τῆς τοιαύτης

\(^{18}\) Ρέπυ. x. p. 595 c. ἀλλ' οὐ πρό 
γε τῆς ἀληθείας τιμητέου ἄνθρ.
the interests of truth;’ and accordingly he proceeds to detail a set of arguments against the logical or metaphysical validity of the Platonic ‘idea of Good.’ We may admit the general necessity for the logic of ethics of this discussion as to the realistic or nominalistic import to be attributed to the term —Good, and we may admit also the courteous terms in which it is introduced. But yet we shall find something unsatisfactory, and requiring explanation, in the arguments themselves which Aristotle proceeds to adduce. In form the controversy appears rather to be with the Platonists, with the rival school in the Academia, than with Plato himself; but yet so much prominence is given to the ‘idea of Good’ in Plato’s Republic, a work which was, beyond doubt, constantly present to the mind of Aristotle when he was writing his Ethics, that we cannot but think that the present passage has reference not only to the logic of the Academy generally, but also to the ethical applications of the ‘idea of Good’ made by Plato himself.

The doctrine of ‘ideas’ is much less settled and constant in Plato’s writings than may be ordinarily supposed. In regard to this, as to many other questions, Plato may be said to have had no system, but to have been constantly enquiring. We find that the transcendental existence of the ‘ideas,’ that is, their existence apart from the human mind, is only asserted, together with the doctrine of our ‘recollecting’ them (ἀνάμνησις), in mythical and imaginative passages of Meno, Phaedrus, and Phædo; that in later dialogues, as Republic, and Philebus, they are treated in a more sober spirit; that in Theaetetus, Sophist, Politicus, and Laws, the ‘ideas’ are mentioned much as Universals would be spoken of in modern books; lastly, what is most remarkable of all, we find in Parmenides a criticism on the doctrine of Ideas,
in which the weak points of the doctrine and the difficulties attendant on it are pointed out. Socrates, who is represented in the dialogue as a promising young man, defends the supposed orthodox view of the Ideas, but he is refuted by the venerable Parmenides, who lectures him on his want of practice in dialectic. And it is a curious fact that the arguments here put by Plato into the mouth of Parmenides are "nearly if not quite" those used by Aristotle in attacking Plato, or at all events that which he enunciates as the Platonic system. It appears then that Plato, at one period of his life, when deeply plunged in the study of Eleatic philosophy, saw that his own doctrine of Ideas required revision, and in the dialogue of Parmenides he at once put out what he had arrived at. These considerations open to us a different view of Plato's relation to the doctrine of Ideas from what we should have gathered from Aristotle in the not unfrequent places in which he criticises this doctrine. Yet, since Plato did at all events sometimes put forward the doctrine in strong and enthusiastic terms, it may be as well to endeavour to trace its general meaning, even if in so doing we incur the same charge that Aristotle has incurred,—of turning poetry into prose and making dogmatic that which was never meant to be such.

Aristotle tells us that Plato's doctrine of Ideas rose from a union between the universal definitions of Socrates and the Heraclitean doctrine of the fleeting character of all objects of sense. To put this a little more clearly, the position is as follows: we desire some permanent and certain knowledge. Let us take some object and try to know it, e.g. 'this man.'

See Prof. Jowett's Introduction to Parmenides (vol. iii. pp. 227 sqq.), where the arguments are analysed.

Metaphys. i. vi., vii. xiii., xiv. iv.—v. Post Analyst. i. xi., &c.

Metaphys. i. vi. 2, xii. iv. 2—3, and see above, page 158.
Looking closely into it we find at once that, in 'this man,' we are in possession of a conception made up of two elements, a universal and a particular. 'Man' is universal, 'this' is particular. Now 'this' may be infinitely various. It is purely relative, entirely changeable. It baffles all attempts at knowledge. The more we analyse 'this,' the more it escapes us, and comes to actually nothing. What constitutes 'this' man? Particular time and place, particular qualities, such as form, colour, size, and the like. But time and place, form, colour, and size are all in themselves universals. 'This' man is determined by 'this' time, place, form, &c. But, again, what is 'this time'? The particular element in 'this time' is equally unknowable and unexpressible with the particular element in 'this man.' Hence Heraclitus said, οὐκ ἔστω ἐπιστήμη τῶν αἰσθητῶν. Let us now take the other side, and look at the universal element, 'man.' This is something permanent and stable; this constitutes a unity in the midst of plurality; this the mind can rest in contemplating. We give to this universal element the name of form or idea (εἶδος, ἴδεα), a name borrowed probably from Democritus, who spoke of the 'forms' of things being emanations from things themselves, and constituting our knowledge of the things. And now another step has to be taken; we must throw out all distinction between knowledge and existence. Since things exist for us solely through our knowledge of them, and we cannot conceive them existing at all, except as either for our minds or for some other minds, we must give up entirely that dualism which would suppose two terms standing opposite each other, namely, the object and the mind, and we must speak now of one term alone. Nothing exists except what we know. Knowledge and existence are identical, since, as Protagoras said (only in an altered sense), the mind is 'the measure of
all things; of existing things that they exist, of non-existent things that they do not exist.' Taking as established the identity of knowledge and existence, we may use one term to express this identity, namely, 'truth' (ἀληθεία), which equally implies reality of existence in things, and the right apprehension of them in the mind.

What is it that possesses truth, or reality? Not particulars, which, as we saw before, are (in so far as they are particulars) unknowable, but the universal, the idea. The universal element, or idea, may hence be said to be the only real existence, while the particulars have only a sort of illusory, or mock existence; when we look closely into them we find they are mere shadows of reality. Hence Plato, following out this train of thought, said, by a forcible metaphor, that common persons who fancy the particulars to be real existences are like men in a dimly-lighted cave, taking the shadows on the wall to be realities. By an equally strong metaphor, which Aristotle speaks of as mere poetry (Meta-
phys. 1. ix. 12), Plato called the Ideas archetypes (παράδειγματα) of sensible things. In this metaphor several points are expressed. (1) That knowledge is rather prior to experience than derived from it. Experience is the occasion, and not the cause of knowledge. This Plato expressed by saying that all our knowledge is 'reminiscence.' Things in the world are constantly reminding us of, and calling up, the reminiscence of the Ideas which we saw in their pure state, before we were born. (2) That the forms of the mind are permanent, while the material world is fleeting. The mind is always prior to, and greater than, the world. This points, as Plato argued in Phædo, to the immortality of the soul. (3) The Eleatics had denied the existence of motion, plurality, change; in short, the whole sensible creation.
PLATO'S DOCTRINE OF IDEAS.

Plato does not go so far as this; though infinitely less real than the Ideas, he allows that it has some share of reality. Metaphorically, he says, 'it partakes of the Ideas.' The Ideas are archetypes of things; in other words, in the midst of the unknowable, the fleeting, the chaotic, the movable—there is law, unity, form, order, symmetry, the permanent, and the absolute, existing not materially, but as ideas, dimly seen by the mind, because it is not pure enough; seen more distinctly, according to the purity and elevation of the mind, and always more or less suggested.

We are now brought to that part of Plato's doctrine where he spoke of the 'Idea of good.' Of this he says (Republic, p. 509 B), that 'As the sun affords to all visible objects not only the power of being seen, but also growth, increase, and nourishment; so is there afforded to all objects of knowledge by the good not only the being known, but also their very being and existence. The good is not existence, but is above and beyond existence (ἐν ἑκείναιᾳ τῆς οὐσίας) in dignity and power.' In Philebus (p. 65 A), it is said that 'the good cannot be comprehended in one idea alone, but it may be taken in three manifestations; beauty, symmetry, and truth.' We see what a metaphysical world we have now to deal with. It is not the material world immediately, but the world of pure cognitions (τὰ γνωσκόμενα), that depend on the good for their existence. Every cognition must have the Idea of good present in it. We cannot conceive anything existing except as being good. Evil, in the shape of disease, crime, pain, &c., Plato, from this point of view, would call the non-existent; it is the negation of existence, the want of existence in some way or other; it is the chaotic, the formless, that which has no universality or absoluteness, that which the mind cannot deal with. The Idea of good in the
world of thought Plato compared to the sun in the material
world; following out this metaphor, evil would be as the
shadows which are the mere negation of light, and yet they
are necessary to relieve the light, for were all light, nothing
would be visible; and so too evil, as the negation of good,
may be said to be necessary to its existence. 'Good,' says
Plato, 'is the cause of existence and knowledge.' This opens
a sublime conception, on the one hand, of a world in which
all things are very good; on the other hand, of a philosophy
whose method of the deepest knowledge consists in no mere
abstract investigations, nor any mere accumulation of expe-
rience, but in apprehending with enthusiasm and joy the all-
pervading idea of Good, as it manifests itself under the
three forms of beauty, symmetry, and truth. The Idea of
Good Plato would by no means confine to metaphysics, as if
it had no application to the other sciences. On the contrary,
his great object was to raise Morals and Politics above all
mere empiricism into Philosophy properly so called. Hence
he says that 'States will never prosper till philosophers are
kings'; again, he says, 'The guardian of the state must know
with certainty that which all vaguely seek and aspire after
—namely, what is the Good' (Repub. p. 505-6). The Idea
of Good, then, according to Plato, is to be a principle influ-
encing human action, and necessarily forming a part of any
system of Politics or Morals worthy of being called so.

With this position Aristotle joins issue. After stating
the theory in the following words (Eth. 1. iv. 3), 'Some have
thought that besides all these manifold goods upon earth,
there is some other absolute good, which is the cause to all
these of their being good'; he proceeds to criticise the tena-
bility of such a conception, and concludes his argument by
saying, 'But we may dismiss the Idea at present, for if there
is any one good, universal and generic, or transcendental
ARISTOTLE'S DISSERT FROM PLATO. 205

(χωρίστων) and absolute, it obviously can neither be realised nor possessed by man, whereas something of this latter kind is what we are enquiring after (Eth. i. vi. 13). He follows up those remarks by saying that 'Perhaps some may think the knowledge of the idea may be useful as a pattern (παράδειγμα) by which to judge of relative good.' Against this he argues that 'There is no trace of the arts making any use of such a conception; the cobbler, the carpenter, the physician, and the general, all pursue their vocations without respect to the Absolute Good, nor is it easy to see how they could be advantaged by apprehending it.'

This criticism is a direct denial of Plato's point of view. Plato, who had expressed himself utterly dissatisfied with the empirical and prudential morality of his countrymen, and who wished to raise morality and Politics (which with him was but morality on an extended scale) into something wise, philosophical, and absolute—made certain requisitions for this. He demanded that a full philosophic consciousness should govern everything. He required that a knowledge of the good-in-itself should be present to the mind. He acknowledges, it is true, that the philosopher, after dealing with sublime speculations, may seem dazzled and confused when he is suddenly confronted with the petty details of life, the quibbles of law-courts, &c. But on the other hand he seems to have considered, not only that philosophy was indispensible to morality, but also that the mind, by contemplating the Idea of good, would be conformed to it. This Idea, then, was not merely an object for the abstract reason; it was an object for the imagination also, and an attraction for the highest kind of desires. It was not only an idea, but also an ideal. Aristotle, in a clearer and more analytic way, regards the Idea as something out of all relation to action (οὐ πράκτων), as a metaphysical conception simply, if, inde
it could be entertained at all. He then entirely separates it from Ethics. He considers that the guiding principle (διόγνη) for Ethics must be not this absolute transcendent good, but a practical good, which he envisaged as Happiness, or the end for man. These two views must stand for ever apart, and on each side there seems to be some degree of merit and some degree of fault. Fine as is Plato’s conception of science, it must be confessed that there is some degree of vagueness about it. We need not put ourselves in the position of Plato’s contemporaries, those of whom the story is related that ‘They went to him expecting to hear about the chief good for man, but they were disappointed, for he put them off with a quantity of remarks about numbers and things they could not understand.’ But even taking Plato as ‘a philosopher for philosophers,’ there seems to be something not quite explained in his system. Infinitely rich as he was in invention and suggestion, we might almost say that he required an Aristotle as his successor to give definiteness to his conceptions. When then we turn to Aristotle, we find the power that is gained by a division of the sciences. We find no longer an effort to attain to that highest point of union for all knowledge and all existence, which is far above the ordinary ken, and which can hardly be viewed otherwise than by occasional glimpses—but rather an effort after clearness and completeness, after the arrangement of all experience under appropriate and separate leading conceptions. It is easy to see what an immense field is at once laid open. Rapid indeed and wonderful were the achievements of a mind like that of Aristotle. But when all is done, one feels also that something has also been lost by this separate treatment of different subjects. One desires again to see Ethics not dissembled from Theology and Metaphysics.

Had Aristotle in the present case contented himself
with denying the appropriateness of the 'Idea of Good,' or, in other words, of the νοητὸν ἀγαθὸν, as an ἄρχη for moral and Political science, the reasonableness of such a view must have been admitted. But he goes further, and undertakes to disprove offhand the tenability, even as part of a metaphysical system, of the 'Idea of Good,' in the sense in which it was held by Plato or by the Platonists. And for this purpose he states his arguments, which are briefly as follows:—

1. The Platonists themselves allow that where there is an essential succession (τὸ πρῶτον και τὸ ὑστερον) between any two conceptions, these could not be brought under a common Idea. But this succession occurs in different kinds of good. Good in relation, e.g. the useful, is essentially later than good in substance, and therefore cannot fall under the same Idea.  

2. If all good were one, it ought to be predicated under only one category, whereas it can be predicated under all.  

3. If it were one, it would be treated of by only one science.  

4. The Idea is only a repetition of phenomena, for with these it is really identical.  

5. Even the most essential and undoubted goods seem incapable of being reduced to one Idea.—Everyone has felt the unsatisfactoriness of these arguments; they seem captious, verbal, unreal, and not to touch the point at issue. Let us examine them separately. Argument (1) seems to beg the question. It refers to the Platonic doctrine of the ideal numbers (referred to Metaphys. xii. vi. 7), which they held to stand in absolute and immutable succession to each other, and to be incapable of being brought themselves under one common Idea. To this Aristotle compares the relation between relative and absolute goods; he says the one stands in immutable succession to the other, therefore there can be no common idea of them. A Platonist might reply, that this is a mere assumption; that in the case of the ideal numbers, Unity and
Duality, for instance, stand in such essential contradistinction to each other, that they are Ideas themselves, and therefore there cannot be Ideas of them. But with regard to the goods, all that is relative in them is merely the particular, the non-existent, which the philosophical reason cannot deal with. It is absurd to make the relativity of the relative good an immutable and permanent quality, which is for ever to distinguish it from the good in itself. (2). The second argument is a mere repetition of the first. Aristotle takes certain categories, namely, substance, quality, quantity, relation, time and place, &c. (καὶ ἑπετα τοιαῦτα), and shows that there are different modes of the good under these different categories. Now, these categories might all be reduced to substance and relation, and then the argument is, 'You have good in substance, and good in different relations; can these be considered the same?' (3) The argument of the sciences is a carrying out of the same objection. Aristotle argues that the sciences point to a still greater subdivision of good. For good, in relation to time, for instance,—that is, opportunity, may be treated of by strategics, or by medicine; and so on with good under the other categories; the sciences still more minutely subdivide it.

Plato might well complain of this subdivision of the sciences being brought as an argument against him, when he had so anxiously urged (Repub. p. 534 E) that in dialectic all sciences united, and dialectic was the science of the Idea of Good.

The fourth argument, which appears also in the Parmenides of Plato, is one of which Aristotle seems fond,—that the Idea (αὑτοκατατον) is a mere repetition of phenomena, exhibiting the same law as the particulars, indistinguishable from them, and therefore perfectly useless. This objection is expressed in the Metaphysics (1. ix. 1) by
saying that 'The Ideas are as if one was unable to count a few things, and thought it would be easier to count them when they were more.' It would seem however to be a misstatement of Plato's view, for it assumes the reality, the substantive and absolute existence of the particulars, and then speaks of the Idea or the Universal being appended to the end of the row, in order to explain them. Whereas Plato might surely say the particulars disappear out of sight; on looking into them I find they have no existence, while the universal grows more and more in reality, and absorbs all the attention of the mind. Instead of 'multiplying phenomena,' Plato might say, 'The Idea reduces phenomena to unity.' Aristotle's account represents the universal or absolute existence as if it was gained inductively from a set of particulars, and added to the end of them; whereas Plato's point of view rather is that the Idea is prior to all the particulars; we do not obtain it inductively, we are reminded of it, but we saw it before we were born, or, in other words, it is innate in the soul and only evoked by experience. Another most captious objection, almost unworthy of the gravity of a philosopher, Aristotle here adds; it is that 'Perhaps the Idea of Good may be said to be distinguished from the number of phenomenal goods by being eternal. But in short this is no difference, the Good is not any more good for this. Length of duration does not constitute a distinction between identical qualities. A white thing is not more white if it lasts long than if it only lasts for a day.' Perhaps this argument need only be stated for its weakness to be seen. Plato would never have consented to this confusion between length of duration (πολυχρόνον) and eternity (ἀνέδηνον). It is true, that in popular thinking we picture to ourselves the eternal under the form of duration of time, but the philosophical conception of the eternal is the necessary (causa sui), the absolute,
the unconditional, the uncreate and indestructible (Eth. iii. iii. 3, vi. iii. 2), that which is out of all relation to time. Aristotle's argument, then, consists in setting the popular way of thinking against the philosophical. He represents the Idea to be a copy taken from the particular and made lasting. Whereas Plato meant—that without which we cannot know the particular or conceive it to exist; that which is independent of this or that particular, though the particulars depend on it; that which is independent of yesterday, or to-day, or a thousand years hence.

At this point of the discussion Aristotle seems to have become conscious to himself (Eth. i. vi. 8) that the Platonists may complain of his attempting to disprove the unity of good by always setting relative goods in opposition to those that are good in themselves. He proposes then to take certain specimens of things good in themselves, and to make these the test of the theory. The specimens he adduces are 'thought, sight, and some pleasures'; he adds that 'If these be not esteemed good in themselves, nothing else but the pure Idea will remain to be called a good in itself; thus the Idea as a universal or class will lose all its meaning, having no individuals ranked under it.' The question then is, Do these goods, which are sought for their own sake, exhibit the same, or different laws of good? To answer this question would require a very deep and subtle investigation; this Aristotle does not enter upon, but he merely gives a summary assertion that 'The laws exhibited by honour, thought, and pleasure, viewed as goods, are distinct and different from one another.' This appears to be mere dogmatism and a trifling with the question. For we might urge that honour is not properly speaking a good sought for its

22 Η ὁδὸς ἀλογίζων πάντα τῆς Ἰδέας, οὕτω μάταιον ἔσται τὸ εὖς.
own sake (cf. Eth. i. v. 5), and that thought, sight, and pleasure, are all of them ἐνέργειας and therefore do according to the Aristotelian views exhibit the same law of good.

Aristotle winds up his polemic by assuming as concluded, that there is no realistic unity in the good. He asks, 'What is the account then of this one word good? It cannot surely have arisen from a mere chance coincidence in language. It must be either that all goods proceed from one source or tend to one end—or rather that they are analogous to one another.' He substitutes then arbitrarily, without proof or discussion (for he says these belong to metaphysics), a nominalistic theory for the realism of Plato. His view is apparently, that men inductively from a set of similar particulars formed the universal 'good,' and by analogy, where cases were analogous, came to extend the same term to dissimilar particulars. Plato's view was that by experience of a particular there is awakened in the mind the knowledge of a universal, which existed there prior to the particular, and is the law of the existence of that particular, and that by many different particulars we 'are reminded' of this same law or idea, and that hence arises sameness of name by reason of a sameness of law under different relative circumstances and modifications. Realism makes the universal prior to and more real than the particular. Nominalism makes the particulars more real than the universal. Aristotle is by no means consistently a nominalist, though here he avows a sort of nominalism for the time.

There is a tradition of the ancients that Aristotle, as a young man, while his vehicle for philosophising was still the dialogue, commenced a pertinacious attack on the doctrine of

---

28 Ὁδὲ ἔστω διὰ τὸ ἀγάθῳ κοινῷ τι κατὰ μιᾶν ἴδεαν.
29 Κατὰ μέθαξιν εἶναι τὰ πολλὰ τῶν.
Ideas. Proclus, quoted by Philoponus (ii. 2) speaks of him as 'proclaiming loudly in his dialogues that he was unable to sympathise with this doctrine, even though his opposition to it should be attributed to a factious spirit.' It is thought by some that the various places of his extant and maturer works which attack the Platonists on this subject, contain rather a résumé of arguments which had been before stated by Aristotle in his early writings, than the results of fresh logical or metaphysical thought. This theory, if accepted, would explain to some extent the very crude and apparently superficial character of the arguments themselves. That such a procedure should have been adopted in a work like the *Ethics* seems not unlikely, when we consider the way which this work was, apparently, written. It was part of a great task which Aristotle had assigned himself,—no less than that of constructing afresh the whole of philosophy (with physical science to follow). Setting himself to this task, Aristotle constructed his *Organon*, and then went on in rapid succession to grapple with Rhetoric, Ethics, Politics, the Art of Poetry, and Metaphysics. All his works on these subjects were more or less incomplete, and all must have been composed under a certain pressure. In these circumstances it is easy to fancy their author repeating his earlier arguments on a particular question, in lieu of exegiitating the matter anew. But it must be observed that one of the arguments here used is expressed in Aristotle’s maturer terminology, for it appeals to the ‘categories,’ or heads of predication. Anyhow, we cannot escape the conclusion that these arguments misrepresent the Platonic doctrine of Ideas, so far as we know it, and do not contain really valid grounds for its rejection.

When we compare the moral system of Aristotle in its
ARISTOTLE'S DISSENT FROM PLATO.

general scope with that of Plato, we are at once struck by a remarkable difference. Plato's was a unifying system; he took the four cardinal virtues of Greece and reduced them to one quality under different aspects,—to the complete regularity and harmony of all the faculties and impulses of the individual soul, under the guidance of wise and philosophic thought. 'Justice' with him was another word for this harmony; 'Temperance' was the subservience of the passions to the reason. 'Courage' was remembering the general principles of the reason in the hour of danger or temptation. The Reason or thought which was to permeate the moral nature was also, with Plato, the contemplation of the absolute. The tendency of Aristotle is in the opposite direction, that of analytical division and separation. Philosophy and its organ, the scientific reason, he put quite apart from morals. Justice, so far as we can learn from the Eudemian book on the subject, he treated, not in a general sense as co-extensive with Virtue, but as a special quality tending to the fulfilment of legal obligations in respect of property. Instead of unifying the virtues he rather multiplied them. In his Politics (i. xiii. 10) he approves of the method of Gorgias, in enumerating the virtues in detail, saying that 'People deceive themselves by general definitions, as that virtue consists in a good condition of the soul, or again in uprightness of action (ὀρθοπραγμένον), or some such thing.' And in the same spirit he says (Eth. ii. vii. 1) that 'While general theories are of wider application' (κοινώτερος, see infra, the note on this passage), 'those that go into detail have more reality, since action consists in detail,' &c. Accordingly he proceeds to give a list of virtues which contain an exemplification of his principle of Μέτρημα. This list does not appear to have been formed on any scientific

26 The allusion is to the Μετρο of Plato p. 71.
basis, it does not start afresh with any new psychological classification. It seems first to accept, in a way, the list of cardinal virtues, placing courage and temperance in the front of its ranks, reserving justice as being something peculiar, and dividing wisdom into practical and speculative. It then adds to these, different qualities, some of them sufficiently external, which were held in honour among the Greeks. In this procedure there is something which must be called empirical. Aristotle has two sides, the one speculative and profoundly penetrating and philosophic; the other side tending to the accumulation of details and of experience, regardless of a philosophic point of view, content with a shallow system of classification. His list, when formed, Aristotle seems to have believed in as complete. He had beforehand given the same in his *Rhetoric* (i. ix. 5) with the omission of three of the virtues here mentioned.

We have seen already the separation made by Aristotle between Ethics and Metaphysics. The same of course holds good of Theology, this being with Aristotle but another name for Metaphysics. Practical theology was not a conception that Aristotle could have admitted. His great divergence from Plato on this head may be seen in the fact that while Plato speaks of 'being made like to God, through becoming just and holy, with thought and consciousness of the same' (*loc. cit.*, see above, p. 193), Aristotle, on the contrary, speaks of moral virtue as being impossible of attribution to the Gods (*Eth. x. viii. 7*). With regard to Aristotle's opinion on the question of a future life we shall speak in Essay V., but at present we may safely say that Aristotle's ethical system differs from that of Plato in being conceived totally without reference to any such consideration. If we compare the tone in which the two philosophers write, it will appear that while Aristotle is far more scientific, he is on the other hand
wanting in the moral earnestness, the tenderness, and the enthusiasm of Plato. Such ideas as that "the whole of life is an education" are not present with him. But again, he is more safe than Plato; he is quite opposed to anything unnatural (such as communism, for instance) in life or institutions. He recognises admiringly the worth and beauty of moral virtue, without the incessant demand which Plato made, that this should be accompanied by philosophy. And on all questions he endeavours to put himself into harmony with the opinions of the multitude, to which he thinks that a certain validity must be ascribed. On the other hand, Aristotle is less delicate and reverent than Plato in his mode of speaking of human happiness, especially as attained by the philosopher. In Plato there seems often, if not always, present, a sense of the weakness of the individual as contrasted with the eternal and the divine. If Plato requires philosophy to make morality, he also always infuses morality into philosophy; the philosopher in his pictures does not triumph over the world, but rather is glad to seize on "some tradition" "like a stray plank," to prevent his being lost; he feels that his philosophy on earth is but "knowing in part." Aristotle, on the contrary, rather over-represents the strength of philosophy. And in his picture of the happiness of the philosopher we cannot but feel that there is over-much elation, and something that requires toning down. In the manner of the writing it is obvious that we miss the art, the grace, the rich and delicate imagination of Plato. Above all, we miss the subtle humour which plays round all the moral phenomena. Aristotle does not show any trace of archness. There are sayings in the *Ethics* which might cause a smile, but they are apparently given unconsciously, in illustration of the point in question. In *Eth.* x. v. 8, to show that the different creatures have each their different proper pleasures,
Aristotle quotes from Heraclitus the saying that 'An ass likes hay better than gold,' without any sense of anything ludicrous in the illustration. The same thing occurs in one of the Eudemian books (vii. vi. 2), where it is mentioned to illustrate the hereditariness of hot temper, that 'A father being kicked out by his son, begged him to stop at the door, for he said he had kicked his father as far as that.' This is mentioned with perfect gravity among a list of arguments. Aristotle's rich and manifold knowledge of human nature exhibits itself in his Ethics. It might be doubted whether Plato would have written the masterly analytical account of the various virtues in Books III. and IV. These are not living dramatic portraits such as Plato would have made, there is nothing personal or dramatic about them; but they are a wonderful catalogue and analysis of very subtle characteristics.

The chief of the school of Plato was Speusippus, nephew to Plato himself, and successor to him in the leadership of the Academy. One of the Pythagoreising opinions of Speusippus is alluded to by Aristotle, Eth. i. vi. 7. 'The Pythagorean theory on the subject seems more plausible, which places unity in the rank of the goods; to which theory Speusippus too seems to have given in his adhesion.' The question adverted to is the identity of 'the One' with 'the Good.' The Pythagoreans appear to have placed 'the One' among the various exhibitions of good, whether as causes or manifestations. Among the Platonists, as we are told (Metaphys. xiii. iv. 8), there arose a difference, a section of them identifying 'the One' with 'the Good,' the others not considering unity identical with, but an essential element of, goodness. They saw that if 'the One' be identified with 'the Good,' it

27 But see notes on Eth. i. iv. 6. viii. vi. 4.
must follow that multeity, or, in other words, matter, must be the principle of evil. To avoid making 'the many' identical with evil, they found themselves forced to abandon the identification of 'the One' with 'the Good.' Of this section Speusippus was leader. He seems to have adopted a Pythagorean formula, saying, that 'the One must be ranked among goods.' Aristotle gives a sort of provisional preference to this theory over the system of Plato. Elsewhere, however (Metaphys. xi. vii. 10), he attacks and refutes the view of 'the Pythagoreans and Speusippus,' that 'Good is rather a result of existence than the cause of it, as the flower is the result of the plant.'

In morals, Speusippus seems to have continued the arguments begun by Plato, against the Hedonistic theory of Aristippus. In the list of his works given by Diogenes28 the following are mentioned—περὶ ἡκονῆς Ἄριστοππος ὁ. His polemic appears to have been one-sided, and his views extreme. One of his arguments on the subject of Pleasure is alluded to by Aristotle, Eth. x. ii. 5, and expressly mentioned with his name by Eudemus, vii. xiii. 1. It seems very probable that other arguments against Pleasure, which are refuted by Aristotle and Eudemus, may have occurred in the treatise on Pleasure written by Speusippus. Another Platonist, with exactly opposite views on Pleasure, was Eudoxus. Of him hardly anything is known. He appears to have been an astronomer, and his personal character is highly praised by Aristotle, Eth. x. ii. 1.

Out of the school of Plato, Aristotle appears to have had a close personal friend, namely, Xenocrates, who accompanied him to Atarneus, on the death of Plato. He was a volumi-
vous writer, and seems to have endeavoured to carry out the
system of Plato on particular points, and to give it a more
practical direction. Besides many treatises on dialectic, the
Ideas, science, genera and species, divisions, thought, nature,
the gods, &c., Diogenes also attributes to him two books on
Happiness, two on Virtue, one on the State, one on the Power
of the Law, &c. The ancients ascribed to him a high moral
tone of thought, saying that he considered virtue as alone
valuable in itself. He seems, however, to have allowed the
existence of a δύναμις ὑπηρεσίας in external fortune, which is,
perhaps, alluded to by Aristotle.\textsuperscript{29} His disciples, Polemo and
Crantor, appear to have had almost exclusively an ethical
direction. We must regret the loss of the writings of these
early Academics, for we should, no doubt, find common to
them much that is to be found in the system of Aristotle.
And yet, so far as we can tell, none of the Platonists appears
individually to have been of sufficient importance to have
greatly influenced Aristotle either in the way of communica-
tion or of antagonism.

ESSAY IV.

On the Philosophical Formulae in the Ethics of Aristotle.

The advance which Philosophy made under the hands of Aristotle, consisted in its becoming scientific. That is to say, it was divided into separate branches, or departments, (πραγματείας) and each of these was a μέθοδος, or orderly setting forth of appropriate principles and the deductions to be made for them; and the instrument for this exposition was a precise terminology. The dialogues of Plato almost invariably exhibited philosophy in the process of being worked out in conjunction with unphilosophical personages, so the point of departure in them is the ordinary thought of refined and cultivated, but not scholastic, circles, and the language is as much as possible that of the purest literary Greek. Yet even Plato, owing to the nature of his subjects, could not keep clear of abstract, highly philosophical, and technical terms. In fact he was always tending to create such; the 'Ideas,' 'Dialectic,' 'Thought' (φρόνησις), the 'Reason' and the 'Understanding;' (διάνοια), 'Being' and 'Not being;' the 'One' and the 'Many,' 'Division,' and other names for logical processes, the names for the constituent parts of the soul, &c., are instances of the kind. But Plato dealt freely with language, as he did with thought, and never bound himself by fixed terms any more than by a fixed system. With
Aristotle the case was different; his object was to be, as far as possible, exhaustive and final on all the great questions of philosophy, and to express his results in precise and permanent phraseology. Thus, the more general forms of thought which he gradually worked out for himself became with him a language which was never laid aside, and which was applied to all subjects. In comparing any Aristotelian treatise with the works of Plato, one sees in it the accumulation of experience and the carrying out of analysis, but still more, one sees the constant recurrence of these forms of thought, which seem brought in to explain everything. The forms indeed frequently become modified through their application to special branches of enquiry; they no longer remain mere logical or metaphysical abstractions, but become concrete ideas. We shall find this abundantly exemplified in the *Ethics*; and it is the object of the present Essay to isolate and examine the formal element of the Aristotelian moral system—to trace the origin and full philosophical meaning of some of the leading terms used, and to follow them out into their ethical application. The formulæ to be discussed are: (1) Τέλος, or the End in-itself, as connected with Aristotle’s doctrine of the four causes; (2) Ἐνέργεια, or the Actual, which Aristotle so constantly contrasted with the Potential; (3) Ἀμετρών, or the Law of Quantity, a term with wide philosophical associations; (4) the Practical Syllogism, a form borrowed from the Aristotelian Logic, and applied by Aristotle himself, and still farther by the Peripatetic school, to explain the phenomena of the human will.

I. Aristotle’s doctrine of the four causes arose probably from a combination and modification of conceptions which occur separately in Plato, namely, the contrast of matter and form, of means and end, of production and existence. Every individual object might be said to be the meeting-point of
these oppositions; it is what it is by reason of the matter out of which it has sprung,—the motive cause which gave it birth, the idea or form which it realises, the end or object which it was intended to attain. Thus knowledge of anything implies knowing it from these four points of view, or knowing its four causes. The End or final cause, however, as is natural, rises to an eminence beyond the other conceptions, and though it must always stand opposed to matter, it tends to merge the other two causes into itself. The end of anything, that for the sake of which anything exists, can hardly be separated from the perfection of that thing, from its idea and form; thus the formal cause or definition becomes absorbed into the final cause (ὁρίζεται γὰρ ἐκαστὸν τῷ τέλει, Eth. iii. vii. 6).

In the same way the End mixes itself up with the efficient cause, the desire for the end gives the first impulse of motion, the final cause of anything becomes identical with the good of that thing, so that the end and the good become synonymous terms. And this is not only the case with regard to individual objects, but all nature and the whole world exist for the sake of, and in dependence on, their final cause, which is the Good. This, existing as an object of contemplation and desire, though itself immovable, moves all things. And so the world is rendered finite, for all nature desiring the Good and tending towards an end is harmonised and united.

In this way is the unity of nature conceived by Aristotle, it is a unity of idea. The idea of the Good as final cause pervades the world, and the world is suspended from it. In the same form his ethical philosophy presents itself. Human life and action are rendered finite by being directed to their end or final cause, the good attainable in action. The ques-

---

1 Καὶ δὲ ἔδει τὸ ὑπὲρ καὶ τὸ κοτυλὸν καὶ τὸ στηρὶ ἐργατεῖ δὲ ὑπαρχεῖ καὶ ἀκτίνι ἐπὶ κινοῦμενα.—Ἐν τοῖς—

2 ἡ φύσις.—Metaph. xi. vii. 2-6,
tion of the *Ethics* is, Τι ἐστι τὸ τῶν πρακτῶν τέλος; And we
might say, altering the words quoted from the *Metaphysics* —From this principle, from the End of action, the whole of
human life is suspended.

An end or final cause implies intelligence, implies a mind
to see and desire it. The appearance of ends and means in
nature is a proof of design in the operations of nature, and
this Aristotle distinctly recognises (*Nat. Ause. ii. viii.*). When we come to Ethics, What is meant by an End of human
action? For whom is this an end? Is it an end fixed by a
higher intelligence? In short, is the principle of Aristotle
the same as the religious principle, that man is born to work
out the purposes of his Maker? To this it must be answered,
that Aristotle is indefinite in his physical theory as to the re-
lation of God to the design exhibited in creation. And so,
too, he is not explicit, in the *Ethics*, as to God’s moral gov-
ernment of the world. On the whole, we may say at present that
‘moral government,’ in our sense of the words, does not at
all form part of Aristotle’s system. His point of view rather
is, that as physical things strive all, though unconsciously,
after the good attainable by them under their several limita-
tions, so man may consciously strive after the good attainable
in life. We do not find in the *Ethics* the expression τέλος
τοῦ ἀνθρώπου, but τῶν πρακτῶν τέλος (i. vii. 8), τῶν ἀνθρω-
πίνων τέλος (x. vi. 1), τὸ ἀνθρώπινον ἄγαθόν (i. xiii. 5). It is
best, therefore, to exclude religious associations (as being un-
Aristotelian) from our conception of the ethical τέλος, and
then we may be free to acknowledge that it is evidently
meant to have a definite relation to the nature and constitu-
tion of man. Thus Aristotle assumes that the desires of man
are so framed as to imply the existence of this τέλος, (*Eth. i.
ii. 1*). And he asserts that man can only realise it in the
sphere of his own proper functions (ἐν τῷ ἐργῷ τοῦ ἀνθρώπου,
THE DOCTRINE OF THE END-IN-ITSELF.

1. vii. 10), and in accordance with the law of his proper nature and its harmonious development (κατὰ τὴν οἰκείαν ἀρετὴν, 1. vii. 15).

Is man, then, according to this system, to be regarded similarly to one of the flowers of the field, which obeying the law of its organisation springs and blooms and attains its own peculiar perfection? This is no doubt one side, so to speak, of Aristotle’s view. But there is also another side. For, while each part of the creation realises its proper end, and, in the language of the Bible, ‘is very good,’ this end exists not for the inanimate or unconscious creatures themselves, it only exists in them. But the ethical τέλος not only exists in man, but also for man; not only is the good realised in him, but it is recognised by him as such; it is the end not only of his nature, but also of his desires; it stands before his thoughts and wishes and highest consciousness as the absolutely sufficient, that in which he can rest, that which is in and for itself desirable (ἀπλῶς δὲ τέλειον τὸ καθ’ αὐτὸ αἰρετῶν ἡ, 1. vii. 4). The ends of physical things are for other minds to contemplate, they are ends objectively. But ends of moral beings are ends subjectively, realised by and contemplated by those moral beings themselves. The final cause, then, in Ethics, is viewed, so to speak, from the inside. Or rather the peculiarity is, that the objective and subjective sides of the conception both have their weight in Aristotle’s system, and are run into one another. The τέλος τῶν πρακτῶν, or absolute end of action, has two forms, which are not clearly separated; in the first place it is represented subjectively as happiness, and in the second place objectively as the morally beautiful.

It has been said that the ancient Ethical systems were theories of the Chief Good, rather than theories of Duty. And Kant brings against Aristotle the charge that his system
is one of mere eudaimonism. We shall have an opportunity in a future Essay of touching upon the relations of this conception ‘duty’ to the ancient systems. At present it will suffice to show that there is some unfairness in the charge brought by Kant, and that it ignores the true characteristics of Aristotle’s Ethical doctrine. It is unfair to charge Aristotle with mere ‘eudaimonism’ simply on account of his making a definition of ‘happiness’ the leading principle of his *Ethics*. This word ‘happiness’ is only a popular way of statement; Aristotle tells us that it is the popular word for the chief good (*Eth. i. iv. 2*). Again, during his whole discussion on the virtues, and on moral actions, there is no mention of happiness as connected with these, as if good acts were to be done for the sake of happiness. There is only one place, and that is in the discussion on happiness itself, where he speaks of it as ‘The end and prize of virtue.’ Elsewhere he speaks of ‘the beautiful’ as being the end of virtue. But again the ‘happiness’ which Aristotle defines as the chief good does not seem immediately, but only inferentially, to imply pleasure. Pleasure (as we shall see hereafter) is rather argued and proved to belong to happiness by a sort of after-thought, and is not with Aristotle a primary part of the conception. Happiness with Aristotle is something different from what we mean by it; so from this point of view, above all, the charge of eudaimonism falls to the ground.

Aristotle’s question is, What is the chief good for man? But this he resolves into another form, What is the *τέλειον τέλος*? What in human life and action is the End-in-itself? How deep is the moral significance of this conception—the absolute end! Can anything small or frivolous, or anything

---

2 τὸ τῆς δρεπῆς ἄθλου καὶ τέλος.—
3 τοῦ καλοῦ ἔνεκα, τοῦτο γὰρ τέλο

*Eth. i. ix. 3. 

*Eth. iii. vii. 2.*
like mere pleasure and enjoyment come up to its requirements, and appear in the deepest depths of the human consciousness to be something beyond which we cannot go—the absolute satisfaction of our nature? Essentially and necessarily, that only can be called a τέλος which has in itself a moral worth and goodness. This also Aristotle says has a sweetness and pleasure of its own, but one quite different from that which springs from any other sources. Men rarely attain to it; but desiring the satisfaction it affords, they seize in its place the pleasure derived from amusements, on account of this latter having some sort of resemblance to the satisfaction which the mind feels in moral acts which are of the nature of an end."\(^4\)

The deep moral pleasure which attaches to noble acts, Aristotle describes as triumphing even over the physical pain and outward horrors which may attend the exercise of courage.\(^5\) And he acknowledges that in many cases this may be the only pleasure attending upon virtuous actions.\(^6\)

We see in these passages how the objective and subjective import of the τέλος are blended together. The end and the consciousness of the end are not separated. In the pleasure which Aristotle speaks of as attaching to the moral τέλος we see something that answers to what we should call "the approval of conscience." Only to say that Aristotle meant this, would be to mix up things modern and ancient. It is better to keep before us as clearly as possible his point of view, which is, that a good action is an End-in-itself, as being

---

\(^4\) Politics, viii. v. 12. Ἐν μὲν τῷ τέλει συμβαίνει τοῖς αὐθέντοις ἀληθικοῖς γίγνεσθαι, . . . ξυμβεβαίει δὲ ποιεῖσθαι τὰ πανταῖς τέλοις ἢ καὶ ἐπειδὴ ἑκατον τῶν καῦτρον, ἀλλ’ οὐ τὴν πυροθάνατον· ξηπτοῦντες δὲ ταύτην, λαμβάνουσιν οὐκ ἡ ταύτην ἐκείνην, διὰ τὸ τῷ τέλει τῶν πράξεων ἢ καί ὁμολογεῖ τι. Cf. Eth. x. vi. 3.

\(^5\) Eth. iii. ix. 2. Οὐ μὲν ἄλλα δέξιες ἢν εἶναι τὸ κατὰ τὴν αὐθεντὴν τέλειν ἡθος.

\(^6\) Eth. iii. ix. 5. Οὐ δὲ ἐν ἤτοΐς τοῖς ἀρεταῖς τὸ ἰδέων ἐνεργεῖν ὁπότερον, πλὴν ἐφ’ ὑσυν τοῦ τέλους ἐφάπαυται.
the perfection of our nature, and that for the sake of which (οδ ἡσύχα) our moral faculties before existed, hence bringing a pleasure and inward satisfaction with it; something in which the mind can rest pleased and acquiescent; something which possesses the qualities of being καλόν, ὀρισμένον, and ἐνέργεια τέλεια.

We observe how in the separate parts of life, in the development of each of the various faculties, Aristotle considers an end to be attainable; how he attaches a supreme value to particular acts, and idealises the importance of the passing moment; how he attributes to each moment a capability of being converted out of a mere means, and mere link in the chain of life, to be an End-in-itself, something in which life is, as it were, summed up. But if in action, and in an exercise of the moral faculties, an end is attainable, this is, according to the system of Aristotle, only faintly and imperfectly an end, compared with what is attainable in contemplation by the exercise of the philosophic thought.

In both senses of the word τέλος, both as perfection and as happiness, Aristotle seems to have placed virtue below philosophy. Philosophy is in the first place the highest human excellence; it is the development of the highest faculty.\(^8\) In the second place, it contains the most absolute satisfaction, it is most entirely desirable for its own sake, and

---

\(^7\) In another passage (Eth. iii. vii. 6), Aristotle seems to use the term τέλος in a more purely objective sense to denote perfection. He says, 'The τέλος of every individual moral act is the same with that of the formed moral character' (τέλος δὲ πάση ἐνέργειας ἐστι τὸ κατὰ τὴν ἔξω). The whole passage is a difficult one; it seems to come to this—An individual act can only be said to have attained perfection when it exhibits the same qualities as the formed moral character—e.g. a brave act is only perfectly brave when it is done as a brave man would do it, consciously for its own sake, or for the sake of the beautiful (καλοῦ ἔννειαν), &c.

\(^8\) Eth. x. vii. 1. Καὶ τὴν ἔννειαν τοῦ ἀριστοτέλους ἐνέργειαν, κατὰ τὴν κρατερίαν ἡ αὑτή τῇ ἐν ἀριστοτέλους ἀριστοτέλους κ.τ.λ.
not as a means to anything else. 9. Whereas the practical virtues are all in a sense means to this. Courage is for war, which is for the sake of the fruition of peace; and in what does this consist? If the practical side of our nature be summed up in the one faculty thought (φρόνησις), this may be regarded after all as subordinate and instrumental to Philosophy (σοφία), the perfection of the speculative side. 10. So too in Politics, the end, or in other words the highest perfection and the highest happiness, being identical for the state and the individual, in what is this constituted? Not in the busy and restless action of war or diplomacy, not in means and measures to some ulterior result, but in those thoughts and contemplations which find their end and satisfaction in themselves. Philosophy, therefore, and speculation are, according to Aristotle, the end not only of the individual, but also of the state. 11. ‘If it be true to say, that happiness consists in doing well, a life of action must be best both for the state, and for the individual. But we need not, as some do, suppose that a life of action implies relation to others, or that those only are active thoughts which are concerned with the results of action; but far rather we must consider those speculations and thoughts to be so which have their end in themselves, and which are for their own sake.’

A moment of contemplative thought (θεωρητική ἐνέργεια) is most perfectly and absolutely an end. It is sought for no result but for itself. It is a state of peace, which is the

---

9 Eth. x. vii. 5. Δόξα γ' ἄν αὐτή μόνη ή' αὐτήν ἀναπάυει. 10 Eth. vi. xii. 8. Ἐκείνη οὖν ἄνεκα ἐνεπάντησε, ἀλλ' ἐκείνη ἐκείνη. 11 Pol. vii. iii. 7. 'Ἀλλ' εἰ ταῦτα λέγεται καθές καὶ τὴν εὐθυμονίαν εὐπροσελευθέρωσεν, καὶ κοινὴ πάσης πόλεως ἄν ἐπὶ καὶ καθ' ἐκείνων κριστὸν βίον ὁ πρακτικὸς. 'Ἀλλ' τὸν πρακτικὸν οὐκ ἄναγκασθον εἶναι πρὸς ἵππον, καθώς ἄριστον ὁμοῖον, οὐδὲ τὰς διανοίας εἶναι μόνος τάς πάντας πρακτικὰς τὰς τῶν ἀνομβυθετῶν χάριν γενομένα ἐκ τοῦ πράττειν, ἀλλ' πολύ μίλλον τὰς αὐτολείψις καὶ τὰς αὐτῶν ἄνεκες θεωρίας καὶ διαμνήσεις.
crown of all exertion (ἀσχολούμεθα ἢνα σχολάζομεν). It is the realisation of the divine in man, and constitutes the most absolute and all-sufficient happiness, being, as far as possible in human things, independent of external circumstances.

This then constitutes the most adequate answer to the great question of Ethics, What is the Chief Good? or Τί ἐστι τὸ τῶν πρακτῶν τέλος; as far as a separate and individual moment of life is concerned. But a difficulty suggests itself with regard to life viewed as a whole. ‘Philosophic thought,’ says Aristotle, ‘will be absolutely perfect happiness if extended over a whole life. For in happiness there must be no shortcoming.’ But, as we shall see more clearly with regard to ἐνέργεια, it cannot actually be so extended. What then is the result? If Aristotle accepts the absolute satisfaction and worth of a moment as the end of life, his principle becomes identical with the μονόχρονος ἡδονή of the Cyrenaics (see above, p. 174). If, again, he requires an absolute τέλος of permanent duration, his theory of human good becomes a mere ideal. Here then is a dilemma between the horns of which Aristotle endeavours to steer, on the one hand acknowledging (Eth. i. vii. 16), that ‘A single swallow will not make a summer;’ on the other hand urging objections against the saying of Solon (Eth. i. x.), that ‘No man can be called happy as long as he lives.’ He says the chief good must be ἐν βίῳ τέλειο, not a perfect life, but in a perfect life—indicating by this expression that the absolute good, as it exists in and for the consciousness, is independent

---

12 Eth. x. viii. 7. Ἡ τελεία εἰσαγωγών θεωρητική τῆς ἐστὶν ἐνέργεια.

13 Eth. x. vii. 4. Ἡ τε λεγομένη αὐτόφθειν περὶ τὴν θεωρητικὴν μάλιστ’ ἐν εἰς.

14 Ἡ τελεία δὴ εἰσαγωγών αὕτη ἐν εἰς ἀνθρώπων; λαβοῦσα μήκος βίου τέλειον ὑπὸν ἀτελές ἢστι τῶν τῆς εἰσαγωγίας. Eth. x. vii. 7.
of time and duration; but still, as we belong to a world of
time and space, that this inner supreme good must have its
setting in an adequate complete sphere of external circum-
stances. About this word ταλάντων there is an ambiguity of
which probably Aristotle, himself, was half conscious; its
associations of meaning are twofold, the one popular, convey-
ing the notion of the ‘complete,’ the ‘perfect,’ the other
philosophic, implying that which is in itself desirable, that
in which the mind finds satisfaction, the absolute. Taking
a signification between the two, we may conceive Aristotle
to have meant, that the chief good must be an absolute mode
of the consciousness, and that this must be attained in a
sphere of outward circumstances themselves partaking of
the nature of absolute perfection. Aristotle’s conception,
then, of the chief good has two sides, the one internal, ideal,
out of all relation to time, which speaks of happiness as the
absolute good, as that end which is the sum of all means, as
that which could not possibly be improved by any addition
(Eth. i. vii. 8); the other side, which is external and
practical, goes quite against the Cyrenaic principle of
regarding the present as all in all, and also against the Cynic
view which would set the mind above external circumstances
(Eth. i. v. 6). This part of the theory considers happiness
as compounded of various more or less essential elements, and
shows how far the more essential parts (τὰ κύρια τῆς εἰδαι-
μονίας) can outbalance the less essential. It requires per-
manence of duration, but it looks for this in the stability of
the formed mental state, which is always tending to reproduce
moments of absolute worth.

The End-in-itself renders life a rounded whole, like a work
of art, or a product of nature. The knowledge of it is to give
definiteness to the aims, ‘So that we shall be now like archers
knowing what to shoot at’ (Eth. i. ii. 2). In the realisation
of it, we are to feel that there need be no more reaching onwards towards infinity, for all the desires and powers will have found their satisfaction (Eth. i. ii. 1). Closely connected then is this system with the view that what is finite is good. ‘Life,’ says Aristotle, ‘is a good to the good man, because it is finite’ (Eth. ix. ix. 7). At first sight these sayings suggest the idea of a cramped and limited theory of life, as if all were made round and artistic, and no room were left for the aspirations of the soul. It must be remembered, however, that that which is here spoken of as making life finite, is itself the absolutely sufficient,—that, above and beyond the outside of which the mind can conceive nothing. And this absolute end is yet further represented as the deepest moments either of the moral consciousness, or of that philosophic reason which is an approach to the nature of the divine being. It must be remembered also that ‘the finite’ (τὸ ὀρισμένον) does not mean ‘the restricted,’ as if expressing that in which limits have been put upon the possibilities of good, but rather the good itself. Good and even existence cannot be conceived except under a law, and the finite is with Aristotle an essentially positive idea. Only so much negation enters into it as is necessary to constitute definiteness and form in contradistinction to the chaotic. Truly we cannot in our conceptions pass out of the human mind; that which is absolute and an end for the mind cannot be a mere limited and restricted conception; but rather nothing can be conceived beyond it. Something might be said on the relation of the Ethical τέλος to the idea of a future life, but this can be better said hereafter.

II. ‘Actuality’ is perhaps the nearest philosophical representative of the ἔνεργεια of Aristotle. It is derived from it through the Latin of the Schoolmen, ‘actus’ being their translation of ἔνεργεια, out of which the longer and more abstract
form has grown. The word 'energy,' which comes more directly from ἐνέργεια, has ceased to convey the philosophical meaning of its original, being restricted to the notion of force and vigour. The employment of the term 'energy,' as a translation of ἐνέργεια, has been a material hindrance to the proper understanding of Aristotle. This is especially the case with regard to the Ethics, where there is an appearance of plausibility, though an utterly fallacious one, in such a translation. To substitute 'actuality' in the place of 'energy' would certainly have this advantage, that it would point to the metaphysical conception lying at the root of all the various applications of ἐνέργεια. But 'actuality' is a word with far too little flexibility to be adapted for expressing all these various applications. No conception equally plastic with ἐνέργεια, and at all answering to it, can be found in modern thought. And therefore there is no term which will uniformly translate it. Our only course can be, first to endeavour to understand its philosophical meaning as part of Aristotle's system, and secondly to notice its special applications in a book like the Ethics. Any rendering of its import in the various places where it occurs must be rather of the nature of paraphrase than of translation.

'Ἐνέργεια is not more accurately defined by Aristotle, than as the correlative and opposite of δύναμις. He implies, that we must rather feel its meaning than seek to define it. 'Actuality' may be in various ways opposed to 'potentiality,' and the import of the conception depends entirely on their relation to each other. 14  Now ἐνέργεια is the existence of a

14 Metaphys. viii. vi. 2. "Εστι γ' ἐνέργεια τὸ ἐνέργεια τὸ πρῶτον, μὴ ἀντιστάσεως διὰ τῶν ἕνωσεις δυνάμεις. Λέγομεν δὲ ἰδίωμα, ὅταν ἐν τῷ ξύλῳ ἔρυμαν καὶ ἐν τῇ δική τῷ θάνατος, δι' ἐνεργείας ἄν, καὶ ἐνεπηκόμως καὶ τὸν ἑαυτοῦ ἔλοιπον, ἐὰν δοὺς τὸ διαφέρεσθαι τὸ δὲ ἐνεργείας ἐδολεῖ καὶ ἐπίκειται τῇ ἐπαγωγῇ, τῆς μὲν παντοτε ταὐτοτές, τῆς δὲ ὁμολογίας, καὶ οὐκ ἐξιπποτικὸν ἔργον ἔστω, ἀλλὰ καὶ τὸ ἀνάλογον συνεφίσμαν —ὅτι δὲ τὸ ὀλικοδομοῦν πρῶτο τὸ ὀλικοδομικόν, καὶ τὸ ἑγγερασόν πρῶτο τὸ καθεύδων,
thing not in the sense of its potentially existing. The term ‘potentially’ we use, for instance, of the statue in the block, and of the half in the whole, (since it might be subtracted,) and of a person knowing a thing, even when he is not thinking of it, but might do so; whereas ἐνέργεια is the opposite. By applying the various instances our meaning will be plain, and one must not seek a definition in each case, but rather grasp the conception of the analogy as a whole,—that it is as that which builds to that which has the capacity for building; as the waking to the sleeping; as that which sees to that which has sight, but whose eyes are closed; as the definite form to the shapeless matter; as the complete to the unaccomplished. In this contrast, let the ἐνέργεια be set off as forming the one side, and on the other let the potential stand. Things are said to be ἐνέργεια not always in like manner, (except so far as there is an analogy, that as this thing is in this, or related to this, so is that in that, or related to that,) for sometimes it implies motion as opposed to the capacity for motion, and sometimes complete existence opposed to undeveloped matter.’

The word ἐνέργεια does not occur in Plato, though the opposition of the ‘virtual’ and the ‘actual’ may be found implicitly contained in\textsuperscript{16} some parts of his writings. Perhaps there is no genuine passage\textsuperscript{17} now extant of any writer pre-

---

\textsuperscript{16} Cf. Theaetetus, p. 157 a. Οὔτε γὰρ ποιοὶν ἄτι τι, πρὸ τοῦ τὸ ὕπόκηρνον ἔντυτον, οὔτε πάνταν, πρὸ τοῦ ποιουντι, κ.τ.λ.

\textsuperscript{17} For the fragment of Philolaus, apud Stob. Ecl. Phys. i. xx. 2, is very suspicious. It is as follows:—Διὸ καὶ καλὸς ἔχει λεγέν μόνον κόσμον ἄνθρωπον ἄφινθεν χεῖρ τε καὶ γενεσία κατὰ συμμολογίαν τὰς μεταβλητικὰς φύσεως.
vions to Aristotle in which it occurs. It is the substantive form of the adjective ἐνέργης which is to be found in Aristotle’s Topics, i. xii. 1. But Aristotle, by a false etymology, seems to connect it immediately with the words ἐν ἔργω. To all appearance the idea of its opposition to δύναμις was first suggested by the Megarians, who asserted that "Nothing could be said to have a capacity for doing any thing, unless it was in the act of doing that thing." This assertion itself was part of the dialectic of the Megarians, by which they endeavoured to establish the Eleatic principles, and to prove by the subtleties of the reason, against all evidence of the senses, that the world is absolutely one, immovable, and unchangeable. We cannot be exactly certain of the terms employed by the Megarians themselves in expressing the above-quoted position, for Aristotle is never very accurate about the exact form in which he gives the opinions of earlier philosophers. We cannot be sure whether the Megarians said precisely ὅταν ἐνεργῆ μόνον δύνασθαι. But at all events they said something equivalent, and Aristotle taking the suggestion worked out the whole theory of the contrast between δύναμις and ἐνέργεια, in its almost universal applicability.

At first these terms were connected, apparently with the idea of motion. But since δύναμις has the double meaning of ‘possibility of existence’ as well as ‘capacity of action,’

18 Cf. Metaph. viii. viii. 11. Αἰών καὶ ταύτην ἐνέργεια άληγέται κατα τὸ ἔργον καὶ συνελείπει πρὸς τὴν ἐνεργήν. 19 Mct. viii. iii. 1. Εἰς γὰρ τὰ τέλεια οἱ φάσεις, οἷς οἱ Μεγαρικοὶ ἔθελεν ἐνεργῆ μόνον δύνασθαι, ἔθελαν δὲ τὸν ἐνεργῆς οὐ δύνασθαι, οἷς τὸν μὴ οἰκοδομῶσα νοσοδομεῖν οὐ δύνασθαι οἰκοδομεῖν. 20 Οἶνος τούτων φήσαι, ἢ οὐ τάπται δύναμει, ἐνεργεῖα δ’ ὀβ. xi. vi. 7. Αἰών ἔννοι τοιούτων δὲ ἐνέργεια, οἷς Λεόκερα καὶ Πλάτων. In these passages Aristotle expresses the ideas of his predecessors in his own formula.

21 Mct. viii. iii. 9. Ἐλεύθερον δ’ ἡ ἐνεργεία ταύτην, ἢ πρὸς ἐνεργής συνεξελείπει καὶ ἐπὶ τὰ ἄλλα, ἐκ τῶν κινήσεων μάλιστα, δοκεῖ γὰρ ἡ ἐνεργεία μάλιστα ἡ κίνησις εἶναι.
there arose the double contrast of action opposed to the capacity for action; actual existence opposed to possible existence or potentiality. To express accurately this latter opposition Aristotle seems to have introduced the term ἐντελέχεια, of which the most natural account is, that it is a compound of ἐν τέλει ἔχειν, "being in the state of perfection," an adjective ἐντελεχής being constructed on the analogy of νουνεχής. But in fact this distinction between ἐντελέχεια and ἐνέργεια is 83 not maintained. The former word is of comparatively rare occurrence, while we find everywhere throughout Aristotle ἐνέργεια, as he says, πρὸς ἐντελέχειαν συντιθεμένη 'mixed up with the idea of complete existence.' As we saw above, it is contrasted with δύναμις, sometimes as implying motion, sometimes as 'form opposed to matter.'

In Physics δύναμις answers to the necessary conditions for the existence of anything before that thing exists. It thus corresponds to ὅλη, both to the πρώτη ὅλη, or matter absolutely devoid of all qualities, which is capable of becoming any definite substance, as, for instance, marble; and also to the ἐσχάτη ὅλη, or matter capable of receiving form, as marble the form of the statue. Marble then exists δυνάμει in the simple elements before it is marble. The statue exists δυνάμει in the marble before it is carved out. All objects of thought exist either purely δυνάμει, or purely ἐνέργεια, or both δυνάμει and ἐνέργεια. This division makes an entire chain of all the world. At the one end is matter, the πρώτη ὅλη, which has a merely potential existence, which is necessary as a condition, but which, having no form and no qualities, is totally incapable of being realised by the mind. So it is

83 Cf. Mel. Ι. Ι. 2. Ἐκ πλέον γὰρ ἐστιν ἡ δύναμις καὶ ἡ ἐνέργεια τῶν μόνων λεγομένων κατὰ κίνησιν. Eth. Ι. Χ. 8. Οὖ γὰρ μόνων κινήσεως ἔστιν ἐνέργεια ἄλλα καὶ ἀκινησία.
also with the infinitely small or great; they exist always as possibilities, but, as is obvious, they never can be actually grasped by the perception. At the other end of the chain is God, οὐσία ἀῤῥητοί καὶ ἐνέργεια ἄμεσον δυνάμεως, who cannot be thought of as non-existing,\(^{24}\) as otherwise than actual, who is the absolute, and the unconditioned. Between these two extremes is the whole row of creatures, which out of potentiality spring into actual being. In this theory we see the affinity between δύναμις and matter, ἐνέργεια and form. Thus Aristotle’s conceptions are made to run into one another. Another affinity readily suggests itself, and that is between ἐνέργεια and τέλος. The progress from δύναμις to ἐνέργεια is motion or production (κίνησις or γένεσις). But this motion or production, aiming at or tending to an end, is in itself imperfect (ἀτέλης), it is a mere process not in itself and for its own sake desirable. And thus arises a contrast between κίνησις and ἐνέργεια, for the latter, if it implies motion, is a motion desirable for its own sake, having its end in itself. Viewed relatively, however, κίνησις may sometimes be called ἐνέργεια. In reference to the capacity of action before existing, the action calls out into actuality that which was before only potential. Thus, for instance, in the process of building a house there is an ἐνέργεια of what was before the δύναμις ὁικοδομική. Viewed however in reference to the house itself, this is a mere process to the end aimed at, a γένεσις, or if it be called ἐνέργεια, it must strictly speaking be qualified as ἐνέργεια τῆς ἀτέλης.\(^{35}\) In short, just as the term τέλος is relatively applied to very subordinate ends, so too ἐνέργεια is relatively applied to what is from another point of

---

24 It might be said that the being of God cannot be fully grasped or realised by our minds; but, according to the views of Aristotle, the everlasting existence of God is an ἐνέργεια for His own mind. He is above all, the in and for Himself existing.

35 Metaph. x. ix. 11.
view a mere γένεσις or κίνησις. This we find in Eth. i. i. 2, διαφορά δὲ τις φαίνεται τῶν τελῶν τὰ μὲν γὰρ εἰσὶν ἐνέργειαι, τὰ δὲ παρ’ αὐτὰς ἔργα τινὰ.

Having traced some of the leading features of this distinction between δύναμις and ἐνέργεια, we may now proceed to observe how this form of thought stamped itself upon Ethics. We may ask, How is the category of the actual brought to bear upon moral questions, and how far is it reacted upon by moral associations? At the very outset of Aristotle's theory it appears. As soon as the proposition has been laid down that the chief good for man is only attainable in his proper work, and that this proper work is a peculiar kind of life, πρακτικὴ τις (ζωῆ) τοῦ λόγου ἔχοντος, Aristotle proceeds to assume (θετῶν) that this life must be no mere possession (καθ’ ἐξιν) of certain powers and latent tendencies, but in actuality, for this is the distinctive form of the conception. He then transforms the qualifying term κατ‘ ἐνέργειαν into a substantive idea, and makes it the chief part of his definition of the supreme good. Thus the metaphysical category of ἐνέργεια, which comes first into Ethics merely as a form of thought, becomes henceforth material. It is identified with happiness. In short, it becomes an ethical idea.

In this connection (like its cognate τέλος) ἐνέργεια becomes at once something mental. It takes a subjective character, as existing now both in and for the mind. Moreover, in an exactly parallel way to the use of τέλος, it receives a double application. On the one hand it is applied to express moral action and the development of the moral powers, on the other

26 Δει τί χαὶ ταύτης λεγομένης τὴν κατ‘ ἐνέργειαν θετῶν· κυριότερον γὰρ αὐτὴ διεξέλθεται, Eth. i. vii. 13. 27 Εἰ δὲ ἐστὶν ἐργὸν ἀνθρώπου ψυχῆς ἐνέργεια κατὰ λόγον, κ.τ.λ.—εἰ δὲ ἀπὸ τῶν ἀνθρώπων ἄγαθων ψυχῆς ἐνέργεια γίνεται κατ‘ ἄρσεν. l. l. 14, 15. 28 Eth. i. xiii. 1. Ἐπεὶ δὲ διὰ τὴν ἐνδεικνύειν ψυχῆς ἐνέργεια τις κατ’ ἄρσεν. Cf. 1. x. 2, ix. x. 5, x. vi. 2.
hand to happiness and the fruition of life. It is in its latter
meaning that ἐνέργεια is most purely subjective. Taken as a
formula to express Aristotle's theory of virtue, we may con-
sider it as applied in its more objective and simpler sense,
though even here it is mixed up with psychological associa-
tions. We shall see how, under newly-invented metaphysical
forms, Aristotle accounts for the moral nature of man.

Aristotle divides δύναμις into physical and mental.29 Of
these mental δύναμις it is characteristic that they are equally
capacities of producing contraries, while the physical are
restricted to one side of two contraries. The capacity of heat,
for instance, is capable of producing heat alone; whereas the
δύναμις ἰατρείη, as being a mental capacity, and connected
with the discursive reason, can produce indifferently either
health or sickness. From this Aristotle deduces the first step
of the doctrine of free-will, namely, that the mind is not
bound by any physical necessity. For he argues that, given
the requisite active and passive conditions, there is a necessity
for a physical δύναμις to act or suffer in a particular way;
but since the mental δύναμις is equally a capacity of contraries,
if there were any necessity for its development, it must be
necessitated to produce contraries at the same time, which
is impossible. Therefore there must be some other influence
which controls the mental δύναμις, and determines into which
side of the two contraries it shall be developed, and this is
either desire or reasonable purpose.30 Connected with this
point is another of still greater importance for the ethical
theory. Not only in the use and exercise of a moral δύναμις

29 Metaph. vii. ii. 1. 'Επεὶ δ' αἱ μὲν ἐν τοῖς ἀφύλη ἐνυπάρχουσιν ἀρχαὶ τοιούται, αἱ δ' ἐν τοῖς ἐμφύλης καὶ ἐν
ψυχή, καὶ τῆς ψυχῆς ἐν τῷ λόγῳ ἔχουσι, δήλον ἐτι καὶ τῶν δυνάμεων αἱ μὲν ἑσο-
tαι διόλογοι, αἱ δὲ μετὰ λόγου.
30 Ἀνάγκη ἄρα ἄπειρον τι εἶναι τῷ κόσμῳ. Λέγω δὲ τοῦτο ὑπέρ ὑπὲρ ὑπαί-
ρεσιν. Metaphys. vii. v. 3.
is the individual above the control of mere external or physical circumstances, but also the very acquirement of these δύναμεις depends on the individual. For the moral capacities are not inherent, but acquired.

In considering how this can be, we may follow the logical order of the question according to Aristotle, and ask which exists first, the δύναμις or the ἐνέργεια? The answer is, that as a conception, in point of thought (λόγος), the ἐνέργεια must necessarily be prior; in short, we know nothing of the δύναμις, except from our knowledge of the ἐνέργεια. In point of time (χρόνος) the case is different; each individual creature exists first δύναμις, afterwards ἐνέργεια. This assertion, however, must be confined to each individual; for, as a necessity of thought, we are led to refer to the potential existence of each thing to the actual existence of something before (a flower, for instance, owes its potential existence in the seed, to the actual existence of another flower before it); and so the world is eternal, for an ἐνέργεια must be supposed as everlastingly pre-existing. But even in the individual there are some things in which the ἐνέργεια seems prior to the δύναμις; there are things which the individual seems to have no ‘power of doing’ until he does them; he acquires the power, in fact, by doing them.21 This phenomenon gives rise to a classification of δύναμεις into the physical, the passive, and the inherent on the one hand, and the mental or acquired on the other.22 The merely physical capacities of our nature exist indepen-

---

21 Metaphys. viii. viii. 6. Ἀν καὶ δεικτικὸν ἔδωκεν ὅτι ἐν εἰσιν διὰ δυναμικήν ἐν γένει, ὁ θανάτω μηδὲν ἐν καθαρσίαν ὁτιὸν μοιχεῖ, πάντως μηδὲν ἐν καθαρσίαν ἐν δύναμις. οὐκ ὑποδεικνύει εἰσιν ὅτι ἐν τῷ τῆς ἀλλοίᾳ τέκνῳ ἐν δύναμις. οὐκ ὑποδεικνύει εἰσιν ὅτι ἐν τῷ τῆς ἀλλοίᾳ τέκνῳ ἐν δύναμις. οὐκ ὑποδεικνύει εἰσιν ὅτι ἐν τῷ τῆς ἀλλοίᾳ τέκνῳ ἐν δύναμις. οὐκ ὑποδεικνύει εἰσιν ὅτι ἐν τῷ τῆς ἀλλοίᾳ τέκνῳ ἐν δύναμις. οὐκ ὑποδεικνύει εἰσιν ὅτι ἐν τῷ τῆς ἀλλοίᾳ τέκνῳ ἐν δύναμις. οὐκ ὑποδεικνύει εἰσιν ὅτι ἐν τῷ τῆς ἀλλοίᾳ τέκνῳ ἐν δύναμις. οὐκ ὑποδεικνύει εἰσιν ὅτι ἐν τῷ τῆς ἀλλοίᾳ τέκνῳ ἐν δύναμις. οὐκ ὑποδεικνύει εἰσιν ὅτι ἐν τῷ τῆς ἀλλοίᾳ τέκνῳ ἐν δύναμις. οὐκ ὑποδεικνύει εἰσιν ὅτι ἐν τῷ τῆς ἀλλοίᾳ τέκνῳ ἐν δύναμις. οὐκ ὑποδεικνύει εἰσιν ὅτι ἐν τῷ τῆς ἀλλοίᾳ τέκνῳ ἐν δύναμις. οὐκ ὑποδεικνύει εἰσιν ὅτι ἐν τῷ τῆς ἀλλοίᾳ τέκνῳ ἐν δύναμις. οὐκ ὑποδεικνύει εἰσιν ὅτι ἐν τῷ τῆς ἀλλοίᾳ τέκνῳ ἐν δύναμις. οὐκ ὑποδεικνύει εἰσιν ὅτι ἐν τῷ τῆς ἀλλοίᾳ τέκνῳ ἐν δύναμις. οὐκ ὑποδεικνύει εἰσιν ὅτι ἐν τῷ τῆς ἀλλοίᾳ τέκνῳ ἐν δύναμις. οὐκ ὑποδεικνύει εἰσιν ὅτι ἐν τῷ τῆς ἀλλοίᾳ τέκνῳ ἐν δύ

22 Metaphys. viii. v. 1. Ἀνακαίνος ἐς τῶν ἐποιεῖν τῶν μὲν ἐποιεῖν, ὀλον τῶν αἰολότων τῶν δὲ ἐκεῖ, ὀλον τῆς τῶν αἰολότων τῶν δὲ ἐκεῖ, ὀλον τῆς τῶν τεχνῶν τῶν μὲν ἄναγκη προενεργητάτης ἐχεῖν ὅτι δὲ καὶ λόγος τὰς μὲν τοιαύτας καὶ τὰς ἑκτὶ τοῦ πάθεων συν ἄναγκη.
dent of any act or effort on the part of the individual. 33 And so, also, is it with the senses. 34 But the contrary is the case with regard to moral virtue, which does not exist in us as a capacity (δύναμις); in other words, not as a gift of nature (φύσει), previous to moral action. 35 We acquire the capacity for virtue by doing virtuous things. It will be seen at once that a sort of paradox is here involved. How can it be said that we become just by doing just things? If we do just things, we are just already. 36 The answer of Aristotle to this difficulty would seem to be as follows:—

1. Virtue follows the analogy of the arts, in which the first essays of the learner may by chance, or by the guidance of his master (ἀπὸ τῆς ψυχῆς καὶ ἄλλου ὑποθεμένου), attain a sort of success and an artistic appearance, but the learner is no artist as yet.

2. These ‘just acts,’ by which we acquire justice, are, on nearer inspection, not really just; they want the moral qualification of that settled internal character in the heart and mind of the agent, without which no external act is virtuous in the highest sense of the term. They are tendencies towards the acquirement of this character, as the first essays of the artist are towards the acquirement of an art. But they are not to be confounded with those moral acts which flow from the character when developed and fixed.

3. The whole question depends on Aristotle’s theory of the

---

33 Eth. i. xiii. 11. Τὴν τοιαύτην γὰρ δύναμιν τῆς ψυχῆς (τοῦ τρίτηκος καὶ ἀπειθεῖος) ἐν ἄνθρωπῳ τούτοις προφέρμουσι δεῖ τις ἀν καὶ ἐν τοῖς ἐμβρύων—διότι ἐν τοῖς ὑπότον ἐνέργεια μᾶλλον τὸ μόριον τούτῳ καὶ ἡ δύναμις ἄβητη.

34 Eth. ii. i. 4. Τὰς δύναμες τούτων πρώτην καμικάθα, δεύτερον δὲ τὰς ἐνέργειας ἀποθέομεν. This doctrine is opposed to some of the modern discoveries of psychology, as, for instance, Berkeley’s ‘Theory of Vision.’ It is corrected, however, in some degree by Aristotle’s doctrine of ἐννοήσεως.

σεις, as related to δύναμις and ἐνέργεια. There can be no such thing, properly speaking, as a δύναμις τῆς ἀρετῆς. As we have before seen, a δύναμις, except it be merely physical, admits of contraries. And therefore in the case of moral action there can only be an indefinite capacity of acting either this way or that, either well or ill, which is therefore equally a δύναμις of virtue and of vice. The ἐνέργεια in this case is determined by no intrinsic law of the δύναμις,—(ἀνάγκη ἔτερον τι εἶναι τὸ κύριον, Met. vii. v. 3), but by the desire or the reason of the agent. The ἐνέργεια, however, is no longer indefinite; it has, at all events, some sort of definiteness for good or bad. And by the principle of habit (ἔθος), which Aristotle seems to assume as an acknowledged law of human nature, the ἐνέργεια reacts upon the δύναμις, reproducing itself. Thus the δύναμις loses its indefiniteness, and passes into a definite tendency; it ceases to be a mere δύναμις, and becomes an ἔσεως, that is to say, a formed and fixed character, capable only of producing a certain class of ἐνέργειαι. Briefly then, by the help of a few metaphysical terms, does Aristotle sum up his theory of the moral character. Καὶ ἐνὶ δὴ λόγῳ ἐκ τῶν ὀμοιῶν ἐνέργειῶν αἱ ἔσεως γίνονται. And it is quite consistent with his entire view of these metaphysical categories, that he defines virtue to be not on the one hand a δύναμις, else it would be merely physical, nor on the other hand a πάθος, (which is here equivalent to ἐνέργεια,) else it would be an isolated emotion,—but a sort of ἔσεως. The ἔσεως, or moral state, is on the farther side, so to speak, of the ἐνέργειαι. It is the sum and result of them. If ἔσεως be regarded as a sort of developed δύναμις, as a capacity acquired indeed and definite, but still only a capacity, it may naturally be contrasted with ἐνέργεια. Thus in the above-quoted passage, Eth. i. vii. 13, διὶτωσ ταύτης λέγομεν means καθ' ἔσεως and καθ'
\textit{enērgēia}, as we may see by comparing \textit{vii. xii. 2}, \textit{viii. v. i.}

From this point of view Aristotle says, that `it is possible for a \(\varepsilon \xi \sigma\) to exist, without producing any good. But with regard to an \textit{enērgēia} this is not possible.' \textit{i. viii. 9.} On the other hand, however, the \(\varepsilon \xi \sigma\) is a fixed tendency to a certain class of actions, and, if external circumstances do not forbid, will certainly produce these. The \textit{enērgēia} not only results in a \(\varepsilon \xi \sigma\), but also follows from it, and the test of the formation of a \(\varepsilon \xi \sigma\) is pleasure felt in acts resulting from it.

(\textit{ii. iii. 1.}) When Aristotle says, that there is nothing human so abiding as the \textit{enērgēmai} κατ' ἀρετὴν—διὰ τὸ μάλιστα καὶ συνεχόμενα κατακτέν ἐν αὐταῖς τοῖς μακαρίους, he implies, of course, that these \textit{enērgēmai} are bound together by the chain of a \(\varepsilon \xi \sigma\), of which in his own phraseology they are the efficient, the formal, and the final cause. It is observable, that the phrase \textit{enērgēmai τῆς ἀρετῆς} occurs only twice in the ethical treatise.

(\textit{iii. v. 1, x. iii. 1.}) This is in accordance with the principle that virtue cannot be regarded as a \textit{dýnamis}. Therefore Aristotle seems to regard moral acts not so much as the development of a latent excellence, but rather as the development or action of our nature in accordance with a law (\textit{enērgēmai κατ' ἀρετὴν}). Virtue then comes in as a regulative, rather than as a primary idea; it is introduced as subordinate, though essential, to happiness.

When we meet phrases like this just mentioned, we translate them, most probably, into our own formulae, into words belonging to our own moral and psychological systems. We speak of `moral acts,' or `virtuous activities,' or `moral energies.' Thus we conceive of Aristotle's doctrine as amounting to this, that `good acts produce good habits,' Practically, no doubt, his theory does come to this; and if our object in studying his theory be \(\omicron \nu \gamma \nu \omega \sigma \tau \iota\ \alpha \lambda \lambda \alpha \pi \rho \alpha \xi \varsigma\), no better or more useful principle could be deduced.
from it. But in so interpreting him, we really strip Aristotle of all his philosophy. When he spoke of ἐνέργεια κατ’ ἄρσεν ὄν, a wide range of metaphysical associations accompanied the expression. He was bringing the mind and moral powers of man into the entire chain of nature, at one end of which was matter, and at the other end God. He had in his thoughts, that a moral ἐνέργεια was to the undeveloped capacities as a flower to the seed, as a statue to the block, as the waking to the sleeping, as the finite to the undefined. And he yet farther implied that this ἐνέργεια was no mere process or transition to something else, but contained its end in itself, and was desirable for its own sake. The distinctness of modern language, and the separation between the various spheres of modern thought, prevent us from reproducing in any one term all the various associations that attach to this formula of ancient philosophy. As said before, we must rather feel, than endeavour to express them.

Hitherto we have only alluded to those conceptions which ἐνέργεια, as a universal category, imported into Ethics. We have now to advert to those which necessarily accrue to it by reason of its introduction into this science. It is clear that a psychical ἐνέργεια must be different from the same category exhibited in any external object. Life, the mind, the moral faculties, must have their ‘existence in actuality’ distinguished from their mere ‘potentiality’ by some special difference, not common to other existences. What is it that distinguishes vitality from the conditions of life, waking from sleeping, thought from the dormant faculties, moral action from the unevoked moral capacities? In all these contrasts there is no conception that approaches nearer towards summing up the distinction than that of ‘consciousness.’
THE DOCTRINE OF 'ENEPHEIA.

Viewed from without, or objectively, ἐνέργεια must mean an existence fully developed in itself, or an activity desirable for its own sake, so that the mind could contemplate it without seeing in it a means or a condition to anything beyond. But when taken subjectively, as being an ἐνέργεια of the mind itself, as existing not only for the mind but also in the mind, it acquires a new aspect and character. Henceforth it is not only the rounded whole, the self-ending activity, the blooming of something perfect, in the contemplation of which the mind could repose; but it is the mind itself called out into actuality. It springs out of the mind and ends in the mind. It is not only life, but the sense of life; not only waking, but the feeling of the powers; not only perception or thought, but a consciousness of one’s own faculties as well as of the external object.

This conscious vitality of the life and the mind is not to be considered a permanent condition, but one that arises in us. Oftenest it is like a thrill of joy, a momentary intuition. Were it abiding, if our mind were capable of a perpetual ἐνέργεια, we should be as God, who is ἐνέργεια ἄνω δύναμις. But that which we attain to for a brief period gives us a glimpse of the divine, and of the life of God. The life of God is of a kind with those highest moods which with us last a brief space, it being impossible that they should be permanent, whereas with Him they are permanent, since His ever-present consciousness is pleasure itself. And it is because they are vivid states of consciousness that

---

26 Eik. ix. 5. γίνεται καὶ οὐχ ὑπάρχει οὐκ εἴστημι τί.
27 Metaph. xi. viii. 9. διαγωγή 8. ἄπιθεν οἷα ἡ ἁρσυτή μερῶν χρόνον ἠμῶν ὑπὸ τὸν τότε ἐκεῖνο ἐστιν, δὲ καὶ μὴν γὰρ ἄπιθεν· ἐπεὶ καὶ ἡ ἐνέργεια τούτων· καὶ δὲ τὸ τότε ἐφρέχορος ὁ- σφηνεῖς νόησις θείων, ἀλλά ἐκεῖνο δὲ καὶ μὴν ἔχει ταῦτα.
waking and perception and thought are the sweetest of all things, and in a secondary degree hope and memory.  

This passage seems of itself an almost sufficient answer to those who would argue that Aristotle did not mean to imply consciousness in his definition of happiness. If our happiness, which is defined as ἐνέργεια ψυχής, gives us a conception of the blessedness of God,’ which is elsewhere defined as the ‘thinking upon thought,’ we can hardly escape the conclusion, that it is the deepest and most vivid consciousness in us that constitutes our happiness. The more this idea is followed out, the more completely will it be found applicable to the theory of Aristotle; the more will it justify his philosophy and be justified by it. But here it is necessary to confess, that in using the term ‘consciousness’ to express the chief import of ἐνέργεια, as applied to the mind and to the theory of happiness, we are using a distinct modern term, whereas the ancient one was indistinct; we are making explicit what was only implicit in Aristotle; we are rather applying to him a deduction from his principles than exactly representing them in their purest form. Aristotle never says ‘consciousness,’ though we see he meant it. But one of the peculiarities of his philosophy was the want of subjective formulae, and a tendency to confuse the subjective and the objective together. About ἐνέργεια itself Aristotle is not consistent; sometimes he treats it purely as objective, separating the consciousness from it; as, for instance, Eth. ix. ix. 9, ἦστι τι τὸ αἰσθανόμενον ὅτι ἐνέργομεν. ‘There is somewhat in us that takes cognisance of the exercise of our powers.’ Again x. iv. 8, τελεῖοι τὴν ἐνέργειαν ἡ ἦδων ὡς ἐπιγινώσκον τι τέλος. ‘Pleasure is a sort of superadded perfection, making perfect the exercise of our powers.’ But this is at variance with his usual custom; for Happiness is universally defined by him as ἐνέργεια, and Eudemus, following
THE DOCTRINE OF 'ENÉRGIEIA.

this out, defined Pleasure, as ἐνέργεια ἀνεμπόδιστος. And if we wish to see the term applied in an undeniably subjective way, we may look to Eth. ix. vii. 6. Ἡθεία δὲ ἐστὶ τοῦ μὲν παρόντος ἡ ἐνέργεια, τοῦ δὲ μέλλοντος ἡ ἐπίπεις, τοῦ δὲ γεγενημένου ἡ μνήμη, where we can hardly help translating, 'the actual consciousness of the present,' as contrasted with 'the hope of the future,' and 'the memory of the past.' In a similar context, De Memoríā, i. 4, we find Τοῦ μὲν παρόντος αἰσθησις, κ.τ.λ.

In saying that the idea of 'consciousness' is implied in, and might almost always be taken to represent, Aristotle's Ethical application of ἐνέργεια, we need not overshoot the mark, and speak as if Aristotle made the Summum Bonum to consist in self-consciousness, or self-reflection; that would be giving far too much weight to the subjective side of the conception ἐνέργεια. Aristotle's theory rather comes to this, that the chief good for man is to be found in life itself. Life, according to his philosophy, is no means to anything ulterior; in the words of Goethe, 'Life itself is the end of life.' The very use of the term ἐνέργεια, as part of the definition of happiness, shows, as Aristotle tells us, that he regards the chief good as nothing external to man, but as existing in man and for man,—existing in the evocation, the vividness, and the fruition of man's own powers.33 Let that be called out into 'actuality' which is potential or latent in man, and happiness is the result. Avoiding then any overstrained application of the term 'consciousness,' and aiming rather at paraphrase than translation, it may be useful to notice one or two places in which the term ἐνέργεια occurs. Eth. 1. x. 2. "Αρά γε καὶ ἐστὶν εὐδαιμον ὅτα ἐπιεἰδὴ ἀποθανή; "Η τοῦτο γε...

33 Eth. 1. viii. 3. ὅθεσι δὲ καὶ δρι πράξεις τινὰ λέγονται καὶ ἐνέργεια τὸ τέλος, οὕτως γὰρ τῶν περὶ φυσώκη ἀγαθῶν γίνεται καὶ οὐ τῶν ἔκτος.
ESSAY IV.

παντελῶς ἄτοπον, ἀλλὰ τε καὶ τοῖν λέγουσιν ἡμῶν ἐνέργειάν τινα τὴν εὐδαιμονίαν; 'Is a man then happy, after he is dead? Or is not this altogether absurd, especially for us who call happiness a conscious state?' 1. x. 9. Κύριαι δ' εἰσὶν αἱ κατ' ἁρετήν ἐνέργειαι τῆς εὐδαιμονίας. 'Happiness depends (not on fortune, but) on harmonious moods of mind.' 1. x. 15. Τί σοι καλῶς λέγειν εὐδαιμονία τὸν κατ' ἁρετήν τελείαν ἐνέργειαν, κ.τ.λ. 'What hinders us calling him happy whose mind is moving in perfect harmony?' vii. xiv. 8. Διὸ ὁ θεὸς ἄει μίαν καὶ ἀπλήν χαίρει ἡδονήν· οὐ γὰρ μόνον κυνήγεως ἢστιν ἐνέργεια, ἀλλὰ καὶ ἀκινησίας. 'God is in the fruition of one pure pleasure everlastingly. For deep consciousness is possible, not only of motion, but also of repose.' ix. ix. 5. Μονώτητι μὲν οὖν χαλεπῶς ὁ βίος· οὐ γὰρ ρόδιον καθ’ αὐτὸν ἐνέργειαν συνεχός, μεθ’ ἐτέρων δὲ καὶ πρὸς ἄλλους ρέων. 'Now to the solitary individual life is grievous; for it is not easy to maintain a glow of mind by one’s self, but in company with some one else, and in relation to others, this is easier.'

The formula we are discussing is applied by Aristotle to express the nature both of Pleasure and of Happiness. By examining separately these two applications of the term, we shall not only gain a clearer conception of the import of ἐνέργεια itself, but also we shall be in a better position for seeing what were Aristotle’s real views about Happiness. 1. The great point that Aristotle insists upon with regard to Pleasure is, that it is not κύνησις or γένεσις, but ἐνέργεια (Eth. x. iii. 4–5, x. iv. 2). What is the meaning of the distinction? In Aristotle’s Rhetorica, which contains his earlier and less scientific view, we find pleasure defined in exactly the terms here repudiated, namely, as ‘a certain
motion of the vital powers, and a settling down perceptibly and suddenly into one’s proper nature, while pain is the contrary.’ This definition corresponds with that given in Plato’s *Timaeus*.40 It seems to have been originally due to the Cyrenaics; for these are said to be referred to by Socrates in the *Philebus* of Plato (p. 53 C,) under the name of ‘a refined set of men (κοιμυστής τιμής), who maintain that pleasure is always a state of becoming (γέννας), and never a state of being (ἐννεῖα)’ (see above, p. 175). Now in all essential parts of their views on pleasure Aristotle and Plato were quite agreed. Both would have said,41 pleasure is not the chief good; both would have made a distinction between the bodily pleasures, which are preceded by desire and a sense of pain—and the mental pleasures, which are free from this; both would have asserted the pleasure of the philosopher to be higher than all other pleasures. The difference between them resolves itself into one of formulae. Plato has no consistent formula to express pleasure, he calls it ‘a return to one’s natural state,’ ‘a becoming,’ ‘a filling up,’ ‘a transition.’ But all these terms are only applicable to the bodily pleasures, preceded by a sense of want. Plato acknowledges that there are pleasures above these, but he seems to have no word to express them. Therefore he may be said to leave the stigma upon pleasure in general, that it is a mere state of transition. Aristotle here steps in with his formula of ἔνεστι, and says, pleasure is not a transition, but a fruition. It is not imperfect, but an End-in-itself. It does not arise from our coming to our natural state, but from our employing it.42

40 Cf. Plato, *Timaeus*, p. 64 D. Το μὲν παρὰ φῆμι καὶ βλάπτων γεγομένην άθρόνον παρ᾽ ἡμῖν πάντως ἄλλες καταστάσεις, ὅτε δ΄ εἰς φῶς ἀπείρετο πάλιν άθρόνον ἡδόν.
42 So Eudemus, *Eth.* vii. xii. 3. Οὔ γαρ κατ’ ἐνεστίν συμβαίνειν, ἀλλὰ χώραν μὲν.
Kant defines pleasure to be ‘the sense of that which promotes life, pain of that which hinders it. Consequently,’ he argues, ‘every pleasure must be preceded by pain; pain is always the first. For what else would ensue upon a continued advancement of vital power, but a speedy death for joy? Moreover, no pleasure can follow immediately upon another; but, between the one and the other, some pain must have place. It is the slight depressions of vitality, with intervening expansions of it, which together make up a healthy condition, which we erroneously take for a continuously-felt state of well-being; whereas, this condition consists only of pleasurable feelings, following each other by reciprocation, that is, with continually intervening pain. Pain is the stimulus of activity, and in activity we first become conscious of life; without it an inanimate state would ensue.’ In these words the German philosopher seems almost exactly to have coincided with Plato. The ‘sense of that which promotes life’ answers to ἀναπληρωσίς, and Plato appears to have held, with Kant, the reciprocal action of pleasure and pain (cf. Phaedo, p. 60). Kant’s formulæ, like Plato’s, are only applicable to the bodily sensations, and do not express pleasures of the mind.

Aristotle in defining Pleasure as ὁ τελειότερὸν τὴν ἐνέργειαν, makes it, not ‘the sense of what promotes life,’ but rather the sense of life itself; the sense of the vividness of the vital powers; the sense that any faculty whatsoever has met its proper object. This definition then is equally applicable to the highest functions of the mind, as well as to the bodily organs. Even in the case of pleasure felt upon the supplying of a want, the Aristotelian doctrine with regard to that

---

43 Kant’s Anthropology, p. 169. The above translation is given by Dr. Badham in an Appendix to his edition of Plato’s Philebus. London, 1855.
44 Cf. Eth. x, iii. 6. ὃς ἐστιν ἤρω
pleasure was, that it was not identical with the supply, but contemporaneous; that it resulted from the play and action of vital powers not in a state of depression, while the depressed organs were receiving sustenance. To account for the fact that Pleasure cannot be long maintained, Aristotle would not have said, like Kant, that we are unable to bear a continuous expansion of the vital powers; but rather, that we are unable to maintain the vivid action of the faculties. Pleasure then, according to Aristotle, proceeds rather from within than from without; it is the sense of existence; and it is so inseparably connected with the idea of life, that we cannot tell whether life is desired for the sake of pleasure, or pleasure for the sake of life.

2. If Happiness be defined as ἐνέργεια ψυχῆς, and Pleasure as ὁ τελειώ τῆς ἐνέργειας, what is the relation between them? Perhaps it is unfair to Aristotle to bring the different parts of his (probably unfinished) work thus into collision. Probably he worked out the treatise on Pleasure in Book X. without much regard to the theory of Happiness, but merely availing himself of the formulae which seemed most applicable. It is only in Book VII. (xiii. 2)—which we have seen reason to consider a later work, and the compilation of Eudemus,—that Pleasure and Happiness are brought together on the grounds that they both consist in 'the free play of conscious life' (ἐνέργεια ἀνεμπόδιστος). This is a carrying out of Aristotle's doctrine beyond what we find in Books I. and X. Aristotle

ἀναπλήρωσις ἡ ἤδονη, ἄλλα γεγομένης μὲν ἀναπληρῶσις ἤδονης' ἐν τῆς τειχ. π. xiv. 7. Δύνατι δὲ καὶ κατὰ συμβεβηκότα ἢδονα τὰ ἀπρόσωπα, ὅτι γὰρ ευμνήται ἀναπλήρωσις τοῦ ῥομέοντος ἑγεῖον πρατ- τούντος τι, διὰ τοῦτο ἢδον δοκεῖ εἶναι, ἢ, ὅτι, that it is the play, in some sort, of the undepressed vital functions, while those that were depressed are being recruited.

Eld. x. i. 9. ἢδος τὰ ἄν- ἔρθεσιν ἄδυνατα συνεχῶς ἐνέργεια.

Eld. x. i. 11. Συνεζεύχοι μὲν γὰρ τὰ ἔγχυον καὶ χαμηλὰ ἢ ἄνθρωπον ἢ ἥπερ ἔρεσιν ἀνα- πληρῶσιν ἢδον, ἀφέων τε ἐνέργειαν τε- τελεῖς ἢ ἢδον.
had prepared the way in these for the identification of Happiness with the highest kind of Pleasure, but had not himself arrived at it. However, we can find no other distinction in his theory between Pleasure and Happiness, than that the latter is something ideal and essentially moral (τέλος καὶ τέλειον πάντα πάντως), and extended over an entire life (λαβοῦσα μήκος βίου τελείου), and implying the highest human excellence, the exercise of the highest faculties (ψυχῆς ἐνέργεια κατὰ τὴν κρατίστην ἀρετήν). We have before alluded to the ideal character of Happiness as a whole. This is shown especially by the fact, that while on the one hand Aristotle says that Happiness (ἐνέργεια ψυχῆς) must occupy a whole life, on the other hand he speaks of brevity of duration as necessarily attaching to every human ἐνέργεια. A δύναμις, he argues, is not only a δύναμις of being, but also a δύναμις of not-being. This contradiction always infects our ἐνέργειαι, and, like a law of gravitation, this negative side is always tending to bring them to a stop. The heavenly bodies, being divine and eternal, move perpetually and unweariedly, for in them this law of contradiction does not exist. But to mortal creatures it is impossible to long maintain an ἐνέργεια,—that vividness of the faculties, on which joy and pleasure depend. Happiness then, as a permanent condition, is something ideal; Aristotle figures it as the whole of life summed up into a vivid moment of consciousness; or again, as the aggregate of such moments with the intervals omitted; or again, that these moments are its essential part (τὸ κύριον μέρος τῆς εὐδαιμονίας), constituting the most blessed state of the internal life (ζωῆς μακαριωτάτη), while the framework

47 Metaph. viii. viii. 18. Διὸ ἄτι ἐνέργεια ψυχῆς καὶ κτερὰ καὶ δύνας ὁ οἴκος, καὶ ὁ φοβηθεὶς μὴ ποτὲ στέγη, διὸ φοβεῖται αἱ περὶ φόβους. Οὐδὲ καὶ μενε τοῦτο ἀρέτη· οὐ γὰρ περὶ τὴν δύναμιν τῆς αἰτίσσεσις αὐτοῦ, οἷον τῶν φθειρῶν, ἡ κλίψις.
for these will be the βλος αἰρετότατος, or most favourable external career (Eth. ix. ix. 9). In what then do these moments consist? Chiefly in the sense of life and personality; in the higher kind of consciousness, which is above the mere physical sense of life. This is either coupled with a sense of the good and noble, as in the consciousness of good deeds done (Eth. ix. vii. 4); or it is awakened by friendship, by the sense of love and admiration for the goodness of a friend, who is, as it were, one's self and yet not one's self (Eth. ix. ix. 10) or finally it exists to the highest degree in the evocation of the reason, which is not only each man's proper self (Eth. ix. iv. 4, x. vii. 9), as forming the deepest ground of his consciousness, but is also something divine, and more than mortal in us.48

III. Turning now to the consideration of Μεσώτης, we shall see that it is only one application of this formula, to use it in reference to moral subjects; that it is indeed a most widely applicable philosophical idea, and has a definite history and development previous to Aristotle. It would seem not to require a very advanced state of philosophy in order for men to discover the maxim, that 'moderation is best,' that 'excess is to be avoided.' Thus as far back as Hesiod we find the praise of μέτρια ἀργα. The era of the Seven Sages produced the gnome, afterwards inscribed on the temple of Delphi, Μηδὲν ἄργα. And one of the few sayings of Phocylides which remain is Πολλὰ μέσοιν ἄριστα, μέσος θέλω ἐν πόλει ἄναι. Now all that is contained in these popular and prudent sayings is of course also contained in the principle of Μεσώτης, which is so conspicuous in the Ethics of Aristotle. But Aristotle's principle contains something

48 The Peripatetics seem to have refined upon Aristotle's use of ἐνεργεία, and to have tried to give it a restricted ethical sense as implying self-determination and will. See above, p. 34.
more—it is not a mere application of the doctrine of moderation to the subject-matter of the various separate virtues. We see traces of a more profound source of the idea in his reference to the verse ἐσθλοὶ μὲν γὰρ ἀπλῶς, παντοδαπῶς δὲ κακῶι. For here we are taken back to associations of the Pythagorean philosophy, and to the principle that evil is of the nature of the infinite and good of the finite.⁴⁹

To say that what is infinite is evil, that what is finite is good, may seem an entire contradiction to our own ways of thinking. We speak of ‘man’s finite nature,’ or of ‘the infinite nature of God,’ from a contrary point of view. But by ‘finite’ in such sentences we mean to express limitations of power, of goodness, of knowledge, each limitation implying an inferiority as compared with a nature in which such limitation does not exist. But the Pythagoreans were not dealing with this train of thought, when they said ‘the finite is good.’ They were expressing what was in the first place a truth of number, but afterwards was applied as a universal symbol; they were speaking of goodness in reference to their own minds. The ‘finite’ in number is the calculable, that⁵⁰ which the mind can grasp and handle; the ‘infinite’ is the incalculable, that which baffles the mind, that which refuses to reduce itself to law, and hence remains unknowable. The ‘infinite’ in this sense remained an object of aversion to the Pythagoreans, and hence in drawing out their double row of goods and evils, they placed ‘the even’ on the side of the bad, ‘the odd’ on the side of the good. This itself might seem paradoxical, until we learn that with even numbers they

⁵⁰ Cf. Philolaus, apud Stob. Ed. Phys. i. xxi. 7. Καὶ πάντα γα μάν τὰ γεγονότων ἄρωμαν ἔχοτο, οἵ γὰρ οἶδαν τὸ ἀδύνατον νοῦς νοσθήμενον ὡς ἐκ νοσθῆμα ἄνεν τοῦτο. Whether this fragment be genuine or not, it expresses the doctrine.
associated the idea of infinite subdivision, and that even numbers added together fail to produce squares; while the series of the odd numbers if added together produce a series of squares; and the square, by reason of its completeness and of the law which it exhibits, is evidently of the nature of the finite. The opposition of the finite and the infinite took root in Greek philosophy, and above all in the system of Plato. Unity and plurality, form and matter, genus and individuals, idea and phenomena, are all different modifications of this same opposition. The Pythagoreans themselves appear to have expressed or symbolised matter under the term τὸ ἀπειρον, and Plato 1 seems to have yet more distinctly conceived of this characteristic of matter or space, saying that it was an 'undefined duad,' that is, that it contained in itself an infinity in two directions, the infinitely small and the infinitely great.

Assuming therefore, that the principle of the finite, or the limit (πεπρασμένον or πέρας), may be considered as identical with that of form or law, we may now proceed to notice what appears to be the transition from the idea of fixed law or form (εἴδος), to that of proportion or the mean (μεσότης), that is, to law or form become relative. It is to be found in the Philebus of Plato, p. 23—27. Socrates there divides all existence into four classes: first, the infinite (ἀπειρον); second the limit (πέρας); third, things created and compounded out of the mixture of these two (ἐκ τούτων μικτῆν καὶ γενεμένην ὠσιονα); fourth, the cause of this mixture and of the creation of things. The infinite is that class of things admitting of degrees, more or less, hotter and colder, quicker and slower, and the like, where no fixed notion of quantity has as yet come in. The limit is this fixed notion of quan-
tity, as, for instance, the equal or the double. The third or mixed class exhibits the law of the πέρας introduced into the ἀπερέων. Of this Socrates adduces beautiful manifestations. Thus in the human body the infinite is the tendency to extremes, to disorder, to disease, but the introduction of the limit here produces a balance of the constitution and health. In sounds you have the infinite degrees of deep and high, quick and slow; but the limit gives rise to modulation, and harmony, and all that is delightful in music. In climate and temperature, where the limit has been introduced, excessive heats and violent storms subside, and the mild and genial seasons in their order follow. In the human mind, 'the goddess of the limit' checks into submission the wild and wanton passions, and gives rise to all that is good.

Both in things physical and moral these two opposites, the finite and the infinite, are thus made to play into one another, and to be the joint causes of beauty and excellence. Out of their union an entire set of ideas and terms seem to spring up, symmetry, proportion, balance, harmony, moderation, and the like. And this train of associations seems to have been constantly present to the mind of Plato. It suited the essentially Greek character of his philosophy to dwell upon the goodness of beauty, and the beauty of goodness, on the morality of art, and the artistic nature of morality; so that words like μετριότης and συμμετρία became naturally appropriated to express excellence in life and action.52

This Platonic principle, then, Aristotle seems to have taken up and adopted, slightly changing the formula, however,
and speaking of μεσότης instead of μετριότης. The reason for this change may have been, that the formula became thus more exact and more capable of a close analytic application to a variety of instances, and at the same time gave scope for expressing that which is with Aristotle the complement of the theory, namely the doctrine of extremes and their relation to the mean. Aristotle does not ignore the physical and artistic meanings of the principle. On the contrary, the whole bearing of his use of the term μεσότης is to show that moral virtue is only another expression of the same law which we see in nature and the arts. Life has been defined to be 'multeity in unity;' in other words, it is the law of the πέρας exhibited in the ἔπειρα. The first argument made use of by Aristotle to show that virtuous action consists in a balance between extremes is drawn from the analogy of physical life; 'For about immaterial things,' he says, 'we must use material analogies.' 'Excess and deficiency equally destroy the health and strength, while what is proportionate (τὰ σύμμετρα) preserves and augments them' (Eth. ii. ii. 6). Again, he points out that all art aims at the mean, and the finest works of art are those which seem to have realised a subtle grace which the least addition to any part or diminution from it would overset (Eth. ii. vi. 9). 'And moral virtue,' he adds, 'is finer than the finest art.' But it is by a mathematical expression of the formula, by reducing it to an absolutely quantitative conception, that Aristotle's use of Μεσότης is chiefly distinguished. He says, that all quantity, whether space or number (ἐν παντὶ δὴ συνεχεῖ καὶ διαμετρᾶ), admits of the terms more, less, and equal. On making these terms relative, you have excess, deficiency, and the mean. The mean, then, is in geometrical proportion what the equal is in arithmetical progression. The middle term arithmetically is that which is equidistant from the terms on each
side of it. Geometrically, the mean is not an absolute mean, but a relative mean, that is, if applied to action, it expresses the consideration of persons and of circumstances (Eth. n. vi. 4–5). This opposition of the mean to the too much and too little becomes henceforward a formula of almost universal application. It is no mere negative principle, not the mere avoiding of extremes, but rather the realisation of a law. When Aristotle says that the μεσότης must be ὀρισμένη λόγος, he means that our action must correspond to the standard which exists in the rightly-ordered mind. What is subjectively the λόγος, law or standard, that is objectively the μεσότης or balance. 'Each of our senses,' says Aristotle, 'is a sort of balance (μεσότης) between extremes in the objects of sensation, and this it is which gives us the power of judging.'

Thus again he says of plants, that they have no perceptions, 'because they have no standard' (διὰ τὸ μὴ ἔχειν μεσότητα, De An. n. xii. 4). Again, he defines pleasure and pain to consist in 'the consciousness, by means of the discriminating faculty (τῇ αἰσθητῇ κῇ μεσότητι) of the senses, of coming in contact with good or evil.' Each of the senses then is, or contains, a sort of standard of its proper object. And it is clear that Aristotle attributes to us a similar critical faculty in regard of morals. He says, that 'It is peculiar to man, as compared with the other animals, that he has a sense of good and bad, just and unjust.' He seems to have regarded this 'moral sense' as analogous to the musical ear,'
which in some degree is almost natural to all men, but again exists in very different degrees in different men, and also may be more or less cultivated. Thus (Eth. ix. ix. 6) he speaks of the good man being 'pleased at good actions, as the musical man is at beautiful tunes.' And in Eth. x. iii. 10 he says that 'It will be impossible to feel the pleasure of a just man if one is not just, as it will be to feel the pleasure of a musical man if one is not musical.' In the Ethics, its proper objective sense is preserved to *μεσοτητις*, which accordingly means a 'balance,' and not the 'standard' for determining that balance, which is expressed by the term *λόγος*. A moment's consideration of this point will give an answer to the somewhat superficial question, Why does not Aristotle make the intellectual virtues mean states? In the original form of the principle of *μεσοτητις* we have seen that it consisted in the introduction of the law of the *πέρας* into the *ἀπειρον*. The passions and desires are the infinite; moral virtue consists in introducing limit (πέρας) into them,—in bringing them under law (λόγῳ ὀρθῶν)—in making them exhibit balance, proportion, harmony (μεσοτητις), which is the realisation of the law. On the other hand, reason is 'right law' (ὀρθῶς λόγῳ), i.e. is another name for the law itself. It is the standard, and therefore does not require to be regulated by the standard. The intellectual virtues are not μεσοτητις, because they are λόγοι.

The worth and validity of Aristotle’s principle of the mean has been much canvassed and questioned. Kant has been very severe on Aristotle for making ‘a merely quantitative difference between vice and virtue.’ Some have thought the theory practically true, but scientifically untenable; others, on the contrary, that scientifically and abstractedly it is true, but that practically it gives an unworthy picture of morality, that it fails to represent the
absolute and awful difference between right and wrong. Aristotle himself seems to have anticipated this last objection, by remarking\(^{56}\) that ‘It is only according to the most abstract and metaphysical conception that virtue is a mean between vices, whereas from a moral point of view it is an extreme (i.e. utterly and extremely removed from them’). Aristotle acknowledges that the formula of the mean does not adequately express the good of virtue; that when thinking of virtue under the category of good, and regarding it as an object for the moral feelings and desires, as an object to be striven after, we should rather seek some other formula to express its nature. In the same way it might be said in accordance with modern views, that ‘the mean’ does not adequately express the right of virtue in relation to the will and conscience.

The objections to Aristotle’s theory arise from a partial misconception of what the term Μεσότης really conveys. Kant for ‘the mean’ substitutes ‘law’. But we have already traced the identity or correlation of Λόγος and Μεσότης, and we have seen that Μεσότης really implies and expresses exactly what is meant by ‘law’—properly so called. The only advantage which the term ‘law’ can have over Μεσότης, as an ethical principle, comes to it unfairly. For there is a sort of ambiguity between the two meanings of the word law; on the one hand it may denote a general principle, or harmony, or idea in nature; on the other hand an authoritative command of the state. In applying the word to morals the associations of both meanings are blended together, and ‘the law of right’ accordingly expresses not only something harmonious, the attainment of an idea in action,

\(^{56}\) Eik. ii. vi. 17. Κατὰ μὲν τὴν Λόγον τῆς Μεσότης ἐστὶν ἡ ἄρετή, κατὰ ἄδοκαν καὶ τὸν Λόγον τοῦ τῆς ἐν εἰδικὴ τῷ τῷ ἄρετον καὶ τῷ εἰδικότης.
but also there is a sort of association of authority conveyed, of the 'must,' of something binding on the will.

Supposing then we take the word 'law' or 'idea' as being the real representative of Μέσον, it may still be asked whether a quantitative term be a fit and worthy expression for so deep a moral conception. The Pythagoreans would not have understood this objection. They thought numbers the most sublime and the only true expression for all that was good in the physical and moral world. They would have used in reference to number the exact counterpart of Wordsworth's praise of Duty—'And the most ancient heavens by thee are fresh and strong.' They would have delighted to say that virtue is a square and vice an uneven-sided figure. When we look to the arts, following the analogy that Aristotle pointed out, we see clearly how the whole of beauty seems from one point of view to depend on the more and the less. It does not derogate from a beautiful form, that more or less would spoil it. We still think of beauty as something positive, and that more or less would be the negations of this. By degrees, however, we come to figure to ourselves beauty rather as repelling the more and the less, than as being caused by them. The capacity for more and less is matter, the αὔτων, the ἄριστος δύνας of Plato. The idea coming in stamps itself upon this, we now have the harmonious and the beautiful, and all extremes and quantitative possibilities vanish out of sight. Matter is totally forgotten in our contemplation of form. So is it also with morals. We might fix our view upon the negative side of virtue, look at it in contrast to the extremes, and say it is constituted virtue by being a little more than vice and a little less than vice. But this would be to establish a positive idea out of the negation of its negations.

To look at anything in its elements makes it appear
inferior to what it seems as a whole. Resolve the statue or
the building into stone and the laws of proportion, and no
worthy causes of the former beautiful result seem now left
behind. So, also, resolve a virtuous act into the passions and
some quantitative law, and it seems to be rather destroyed
than analysed; though, after all, what was there else that it
could be resolved into? An act of bravery seems beautiful
and noble; when we reduce this to a balance between the
instincts of fear and self-confidence, the glory of it is gone.
This is because the form is everything, and the matter
nothing; and yet the form, without the matter as its ex-
ponent, has no existence. It is, no doubt, true that the
beauty of that brave act would have been destroyed had the
boldness of it been pushed into folly; and equally so had it
been controlled into caution. The act, as it was done, ex-
hibits the law of life, 'multeity in unity;' or, in other words,
the law of beauty. This is, then, what the term Μεσότης
is capable of expressing; it is the law of beauty. If virtue
is harmony, grace, and beauty in action, Μεσότης perfectly
expresses this.

That beauty constituted virtue, was an eminently Greek
idea. If we run through Aristotle's list of the virtues, we find
them all embodying this idea. The law of the Μεσότης, as
exhibited in bravery, temperance, liberality, and magnanimity,
constitutes a noble, free, and brilliant type of manhood.
Extend it also, as Aristotle does, to certain qualifications of
temper, speech, and manners, and you have before you the
portrait of a graceful Grecian gentleman. The question now
is, are there other virtues which exhibit some other law than
this law of beauty, and to which, therefore, the Μεσότης
would be inapplicable? Let us take as instances, truth,
humility, charity, forgiveness of injuries, and ask what is the
case with these. 'Truth' is treated of in a remarkable way
THE DOCTRINE OF THE MEAN.

by Aristotle; under this name he describes a certain straightforwardness of manner, which he places as the mean between boastfulness and over-modesty. That deeper kind of truth which, as he says, is concerned with justice and injustice, he omits to treat of. When we come to the Peripatetic theory of justice—taking this as an individual virtue—we find it imperfectly developed. Now, truth itself seems expressible under the law of the _meandé_; it is a balance of reticence with candour, suitable to times and seasons. But the impulse to truth—the duty of not deceiving—the relation of the will to this virtue, seems something quite beyond the formula of the Mean.

So, also, with the other virtues specified; humility, charity, and forgiveness of injuries being Christian qualities, are not described by Aristotle; but if we ask if they are 'mean states,' we find that they are all beautiful; and, in so far as that, they all exhibit a certain grace and balance of the human feelings. There is a point at which each might be overstepped; humility must not be grovelling, nor charity weak; and forgiveness must at times give place to indignation. But there seems in them something which is also their chief characteristic, and which is beyond and different from this quality of the mean. Perhaps this might be expressed in all of them as 'self-abnegation.' Now, here, we get a different point of view from which to regard the virtues; and that is, the relation of Self, of the individual Will, of the moral Subject to the objective in the sphere of action. This point of view Aristotle's principle does not touch. _meandé_ expresses the objective law of beauty in action, and, as correlative with it, the critical moral faculty in our minds, but the law of right in action as something binding on the moral subject it leaves unexpressed. To some extent this want is supplied by Aristotle's doctrine of the _télos_, which raises a
beautiful action into something absolutely desirable, and makes it the end of our being.

But still the theory of 'Duty' cannot be said to exist in Aristotle, and all that relates to the moral will is with him only in its infancy. Μεσότης, we have seen, expresses the beauty of good acts, but leaves something in the goodness of them unexpressed. In conclusion, we must remember that 'Αρετή with Aristotle did not mean quite the same as 'virtue' with us; he meant the excellence, or perfection of man, just as he spoke elsewhere of the 'Αρετή of a horse. It is no wonder then that with his Greek views he resolved this into a sort of moral beauty.

IV. Aristotle prided himself,57 not unnaturally, on having been the first to work out the laws of the Syllogism; later on in his literary career he appears to have seen that the syllogistic formula might be useful for expressing other psychological phenomena, besides those involved in arriving at a deductive conclusion. Accordingly in his treatise On the Soul (III. xi.) he applies it to explain the process of arriving at a resolution or determination to act. He says that this process is only possible in the animals which possess the power of calculation (ἐν τοῖς λογιστικῶις); that it implies a power of combining two or more impressions into one (ἐν ἑκ πλεύονοις φαντασμάτων ποιεῖν); that this syllogistic conviction (τὴν ἐκ συλλογισμοῦ δόξαν) contains on the one hand perception and it may be desire, and on the other hand a universal element,—wish for the generally good (βουλήσεις, see note on Eth. III. i. 1), or a general intellectual conception of the reason (ἡ καθόλου ὑπόληψις καὶ λόγος); that sometimes the wish for the generally good conquers the particular

---

57 Cf. Sophist, Elench. xxxii. 18. Καὶ περὶ μὲν τῶν ῥητορικῶν ὑπήρχε πολλὰ καὶ παλαιά τὰ λεγόμενα, περὶ δὲ τῶν συλλογισμῶν παντελῶς αἰσθάνεται εἴχομεν ἄλλο λέγειν, ἄλλα ὡς τρήτη ἦτούση πολὺν χρόνον ἑπονοούμεν.
desire of the moment, and sometimes the contrary takes place (μεν δ' ἐνίοτε [ἡ ὀρέξει] καὶ κινεῖ τὴν βουλήσειν δέ τε ἐκείνη ταύτην); and that, though the general proposition, or major premiss, asserts that 'such or such a person ought to do such or such an act,'—it is the minor premiss 'I am such or such a person and this in the present moment is such or such an act' which sets the faculties in motion (ἡ δὴ αὐτὴ κινεῖ ἡ δόξα, οὔχ ἡ καθόλου).\textsuperscript{38} This passage, which was probably written long after the discussions on Wish and Deliberation in the third book of the Ethics, comes in, as it were incidentally, in treating of the ascending series of souls throughout nature. The suggestion which it contains of explaining the psychology of the human will by means of the formula of the syllogism does not appear to have been pursued further by Aristotle in his extant writings, but it was evidently taken up by the Peripatetic school, and we find it made much use of (1) in the Eudemian Ethics, and (2) in the treatise On the Motion of Animals, which is placed among the works of Aristotle, but is now generally attributed to a later follower of his school.\textsuperscript{39} For a clear exposition of the doctrine of the Practical Syllogism, as held by the Peripatetics, let us refer at once to the summary account of it which is given in the last-mentioned treatise.

The Practical Syllogism depends on this principle, that 'No creature moves or acts, except with a view to some end.'\textsuperscript{40} What therefore the law of the so-called 'sufficient reason' is

\textsuperscript{38} See note on Eth. vi. xii. 10, where the latter part of the above passage is quoted.

\textsuperscript{39} See Valentine Rose, De Arist. Lib. Ord. et Auct. pp. 162-174. Rose shows that this little treatise contains medical doctrines belonging to a school of medicine later than Aristotle; and it has all the marks of being an able cento and compendium of various parts of Aristotle's physical and physiological works.

\textsuperscript{40} Πάντα τὰ ὑπὸ καὶ κινεῖ καὶ κινεῖται ἐνεκά τινα, ἢστε τοῦτο ἢστιν αὐτοῖς πάντως τῆς κινήσεως πέρας, τό ὁ ἐνεκα.

—De Mot. Anim. vi. 2.
to a proposition of the understanding, that the law of the final cause is to an act of the will. ‘Under what conditions of thought is it,’ asks the writer, ‘that a person at one time acts, at another time does not act; at one time is put in motion, at another time not? It seems to be much the same case as with people thinking and reasoning about abstract matter, only there the ultimate thing to be obtained is an abstract proposition, for as soon as one has perceived the two premisses, one perceives the conclusion. But here the conclusion that arises from the two premisses is the action; as, for instance, when one has perceived, that Every man ought to walk, and I am a man, he walks immediately. Or again, that No man ought now to walk, and I am a man, he stops still immediately. Both these courses he adopts, provided he be neither hindered nor compelled. . . . That the action is the conclusion, is plain; but the premisses of the practical syllogism are of two kinds, specifying either that something is good, or again, how it is possible.’

This then may shortly be said to be the form of the practical syllogism:

either (1) Major Premiss. Such and such an action is universally good.

Minor Premiss. This will be an action of the kind.

Conclusion. Performance of the action.

---

61 *De Mol. An. vii. 1.* Πῶς δὲ νοεῖν ὅτε μὲν πράττει, ὅτε δὲ οὐ πράττει, καὶ κινεῖται, ὅτε δὲ οὐ κινεῖται; Ἡ ἑαυτοῦ παράφυσιν συμβαίνει καὶ περὶ τῶν ἀνάμεσα διανοούμενοι καὶ συλλογιζομένοι. Ἄλλες δὲ μὲν θεώρημα τὸ τέλος (ὅτων γὰρ τὰς δύο προνόεις νοήσει, τὸ συμπέρασμα ἐνόησε καὶ συνέθεται), ἐναέρα δὲ ἐκ τῶν δύο προνόεσεων τὸ συμπέρασμα γίγνεται ἡ πράξεις, οἷον ὅταν νοήσῃ ὅτι ποιητὴς ἀνθρώπης, αὐτὸς δὲ ἀνθρώπος, βαδίζει εὐθέως, λέγει δὲ εὐθέως ἀνθρώποι τὸν ἀνθρώπην, αὐτὸς δὲ ἀνθρώπος, εὐθεὺς ἑρμήνευε καὶ ταύτα ἁμφοῦ πράττει, ἐν μή τι καλός ἡ ἀναγκαῖα.

62 *De Mol. An. vii. 4.* Ὑπὶ μὲν οὖν ἡ πράξει τὸ συμπέρασμα, φανερῶν ἡ δὲ προνόεις αἰτία συμπέρασμα, διὰ διὰ τοῦ ἀγαθοῦ καὶ διὰ τοῦ δυστατοῦ.
or (2) Major Premiss. Such and such an end is desirable.

Minor. This step will conduce to the end.

Conclusion. Taking of the step.

In other words, every action implies a sense of a general principle, and the applying of that principle to a particular case; or again, it implies desire for some end, coupled with perception of the means necessary for attaining the end. These two different ways of stating the practical syllogism are in reality coincident; for assuming that all action is for some end, the major premiss may be said always to contain the statement of an end.63 And again, any particular act, which is the application of a moral principle, may be said to be the means necessary to the realisation of the principle. ‘Temperance is good,’ may be called either a general principle, or an expression of a desire for the habit of temperance. ‘To abstain now will be temperate,’ is an application of the principle, or again, it is the absolutely necessary means towards the attainment of the habit. For ‘it is absurd,’ as Aristotle tells us, ‘when one acts unjustly to talk of not wishing to be unjust, or when one acts intemperately of not wishing to be intemperate.’64

The distinction between end and means, which plays so important a part throughout the moral system of Aristotle, comes out, as might be expected, very prominently in Book III., where what must be called a sort of elementary psychology of the Will is given. But no application is there made of the scheme of the syllogism. Indeed a mathematical formula seems used in Book III., where a logical formula is

---

63 Eth. vi. xii. 10. Οἱ γὰρ συλλογισμοὶ τῶν πρακτῶν ἀρχῶν ἔχουσι εἰσίς εἰς, ἐπειδὴ ταῦτα τὸ τέλος καὶ τὸ ἀριστον.

64 Eth. iii. v. 13. Ἔτι δ᾿ ἀλαλοῦν τῶν ἄκολοντα μὴ βούλεσθαι ἁδικὸν εἶναι ἢ τῶν ἄκολοντα ἁδικὸν ἀκόλουθον.
in Book VI.; for in the former, the process of deliberation is compared to the analysis of a diagram (Eth. iii. iii. ii.); in the latter, error of deliberation is spoken of as a false syllogism, where the right end is attained by a wrong means, that is, by a false middle term.  

It is to Books VI. and VII. that we must look to see the use made of the practical syllogism. It is applied, first, to the explanation of the nature of Thought (φρόνησις), which is shown to contain a universal and a particular element.  

2. To show the intuitive character of moral judgments and knowledge.  

3. To prove the necessary and inseparable connection of wisdom and virtue.  

4. In answer to the question, how is it possible to know the good, and yet act contrary to one's knowledge? In short, how is incontinence possible? This phenomenon is explained in two ways; either the incontinent man does not apply a minor premise to his universal principle, and so the principle remains dormant, and his knowledge of the good remains merely implicit; or, again, desire constructs a sort of syllogism of its own, inconsistent with, though not directly contradictory to, the arguments of the moral reason.  

Incontinence therefore implies knowing the good, and at the same time not knowing it. It would be impossible to act contrary to a complete syllogism which applied the knowledge of the good to a case in point; for the necessary conclusion to such a syllo-

65 Eth. vi. ix. 5. Ἀλλ' ἐστι καὶ τούτῳ φεύγει συλλογισμῷ τυχεῖν, καὶ δὲ μὲν δεῖ ποιῆσαι τυχεῖν, δὲν δ' οὐ δ' οὐς, ἀλλὰ φεύγῃ τὸν μόνον ὄρον ἐλθεῖν.  
66 Eth. vii. vii. 7. Όδη γ' εἴτιν ἡ φρονὶς τῶν καθόλου μόνων, ἀλλά δεὶ καὶ τὰ καθ' ἑκατ' ἱκανά ἱκανή ἵππος, κ.τ.λ.  
67 Eth. vii. vii. 7. Ἐστι δ' ἡ ἀμαρτία δ' ἐπεὶ τὸ καθόλου ἐν τῷ βουλευτέοντων ἐπεὶ τὸ καθ' ἑκατὸν; ἡ γὰρ ἐστὶ πάντα τὰ βαρόσταθμα ὑδάτα φαύλα, ἢ δὲν τοι δ' ἐρώταθμον.  
68 Eth. vi. vii. 4. Καὶ δ' ῥοῦν τῶν ἐσβάθων ἐπ' ἄμφοτέρα, κ.τ.λ.  
69 Eth. viii. xii. 10. Ἐστι δ' ἡ φρόνησις . . . ἀρχής.  
70 Eth. viii. iii. 6. Εἰτε ἐκεῖ . . . οὐκ ἐνεργεῖ.  
71 Eth. viii. ii. 9, 10. Ἐστι καὶ οἶκε . . . κατὰ συμβεβηκεί.
gism would be good action. But there is broken knowledge and moral obliviousness in the mind of the incontinent man, and the practical syllogism gives a formula for expressing this.

The foregoing references serve to show, that in itself this formula is only a way of stating certain psychological facts. The question whether people do really go through a syllogism in or before every action, is much like the question whether we always reason in syllogisms. Most reasonings seem to be from particular to particular, that is to say, by analogy; and yet some sort of universal conception, if it be only the sense of the uniformity of nature, lies at the bottom of all inference. And so too in action, most acts seem prompted by the instinct of the moment, and yet some general idea, as for instance, the desire of the creature for its proper good, might be said to lie behind this instinct. This theory acknowledges\(^\text{70}\) that the mind constantly passes over one of the premises of the practical syllogism, as being obvious; that we act often instantaneously, without hesitation, just because we see an object of desire before us. Thus it is merely a way of putting it, to say that we act from a syllogism. But granting the formula, it becomes immediately a powerful analytic instrument. It seems to suggest and clear the way for a set of ulterior questions, in which important results would be involved. For now that action has been as it were caught, put to death, and dissected, and so reduced to

---

\(^{70}\) \textit{De Mot. An.} vii. 4, 5. "\textit{Περὶ τῶν ἐρωτάσεων οὖν, ὡς τὴν ἑτέραν πράξεων τὴν δὴ λέγοντι ὡς \ η ἰδιαίτερα ἐφοτισμένα σκοπεῖ οὐδὲν ἢ μὲν \ άπλω τὸ \ βαβίζειν ἀγαθόν ἀνθρώπος, \ η τῶν \ άμερωτος, \ οὐ \ εἰσαφερίζει. \ Διὸ καὶ \ διὰ μὴ καταλαμβανομεν πράξεων, ταύτω \ πράξεων. \ Ὡς \ γὰρ \ εὐεργηθής \ η \ τῇ αὐ-}
the level of abstract reasoning, it seems that we have only to deal with its disjointed parts in order to know the whole theory of human Will. We have only to ask what is the nature of the major premiss, and how obtained? What is the nature of the minor premiss, and how obtained? The answer to these questions in the Ethics is not very explicit. This is exactly one of the points on which a conclusive theory seems to have been least arrived at. With regard to our possession of general principles of action, there appear to be three different accounts given in different places.

(1) They are innate and intuitive (VI. xi. 4, VII. vi. 6, 7).

(2) They are evolved from experience of particulars (VI. viii. 6).

(3) They depend on the moral character (VI. xii. 10, VII. viii. 4).

These three accounts are not, however, incompatible with one another. For as in explaining the origin of speculative principles (Post. An. ii. xix.) Aristotle seems to attribute them to reason as the cause and experience as the condition; so in regard to moral principles, we might say that they were perceived by an intuitive faculty, but under the condition of a certain bearing of the moral character, which itself arises out of and consists in particular moral experiences. This reconciliation of the statements is not made for us in the Ethics. There the different points of view stand apart, and there is something immature about the whole theory. So too with regard to the minor premiss in action; on the one hand we are told that it is a matter of perception (VI. viii. 9), as if it belonged to everybody; on the other hand we are told that the apprehension of these particulars is exactly what distinguishes the 'thoughtful' man. But it is unnecessary to at-
THE DOCTRINE OF THE PRACTICAL SYLLOGISM.

tempt to go beyond the lead of the *Ethics* in answering these questions, for we should ourselves most probably state them in an entirely different way.

We see in these applications of the Practical Syllogism by the Peripatetics the progress of psychology, and the tendency now manifesting itself to give attention to the phenomena of the Will. The manner in which the theory is stated, abstractedly, and with a full belief in logical formulae, rather than an appeal to life and consciousness,—shows something of the scholastic spirit. To reduce action to a syllogism dogmatically is a piece of scholasticism. Plato would have put it in this way for once, and would then have passed on to other modes of expression. But it is remarkable that this formula is one of those that remains most completely stamped upon the language of mankind. When we talk of 'acting on principle,' or speak of a man's 'principles,' perhaps we do not reflect that this expression is a remnant of the Practical Syllogism of the Peripatetics. 'Principle' is no other than the Latinised form (principium) of ἰδραχη, or the major premiss of a practical syllogism. And this, as we saw above, is in Aristotle's language 'a universal conception affirming that one ought to do (or not to do) some kind of thing.'

72 De An. l.c. ἡ μὲν καθότων ὑπόληψις καὶ λόγος . . . λέγει ὦτι δὲι τὸν τοιῶτον τὸ τοιῶθε πράττειν.
ESSAY V.

On the Physical and Theological Ideas in the Ethics of Aristotle.

Although Aristotle endeavoured completely to separate practical from theoretic philosophy; and though in the present treatise he professed to adhere exclusively to an ethical (or, as he called it, a political) point of view; and though on this account he postponed, as belonging to another branch of philosophy, the consideration of several important questions—yet still it was perhaps impossible for a system of morals to be composed bearing no trace of the writer's general views of the Universe, the Deity, and the Human Soul. And accordingly, we find more than one passage of the Nicomachean Ethics influenced by and indicating such general views. To understand these, and to obtain possession of that which in the mind of Aristotle must have been the setting of the entire piece, we have to follow him to some extent beyond the limits of his Practical writings. To collect a few of Aristotle's more salient dicta on Nature, God, and the Soul, will be an interesting task, but we must not be

---

1 As, for instance, the metaphysical question concerning the good, as a universal, Eth. i. vi. 13. The question of Divine Providence in relation to happiness, i. ix. 13. The question whether, scientifically speaking, the Soul is divisible into parts, i. xiii. 8–10. The question whether in nature, as a general principle, the like seeks the like, or each thing seeks its opposite, vnr. i. 7, &c.
expected to set forth a complete and definite system on these subjects, for in regard to them Aristotle's extant writings are far from containing entirely definite results, and it may even be doubted, whether in his own mind he ever succeeded in arriving at such.

In deducing Aristotle's opinions on any question from his extant works, we must not leave out of consideration the probable order and mode of composition of these works, as indicated by internal evidence (see above p. 70 note). It seems highly probable that Aristotle—having during the previous course of his life thought out the divisions of philosophy, the leading ideas of each department, and the phraseology in which everything was to be expressed, and having also collected great stores of materials on all the subjects which his predecessors had treated of—set to work, when about fifty years old, to make his exposition of the whole, as a settlement of questions and a κτήμα εἰς ἄσι for the world. He appears to have commenced with that which was not part of Philosophy, but was a necessary prelude to Philosophy, namely, the discussion of Method under the two forms of Dialectic, or the Logic of Probability, and Analytic, or the Logic of Science. His treatises on these subjects were collectively entitled by his editors Organon, or the Instrument of Philosophy. Collaterally, and almost simultaneously with these, he appears to have composed his Rhetoric, as treating of a subject closely allied to Dialectic. And an easy transition led him on to deal next with the remaining branches of Practical and Productive philosophy in his Ethics, Politics, and Art of Poetry (see p. 70, note). Leaving all these more or less unfinished, he seems to have

* See Grote's Aristotle, vol. i. p. 78, and Brandis' Schol. ad Arist. p. 259, a. 48, &c.
gone on to the composition of his great series of Physical treatises. Of these probably the first to be written was the Physical Discourse, which contained, as Hegel said, 'the Metaphysic of Physics;' being an account of what Aristotle conceived under the terms 'Nature,' 'Motion,' 'Time,' 'Space,' Causation' (or the Four Causes), and the like. After these prolegomena to Physics, he proceeded to treat of the Universe in orderly sequence, beginning with the divinest part, the periphery of the whole, or outer Heaven, which, according to his views, bounded the world, being composed of ether, a substance distinct from that of the four elements and identical with that which constitutes the vital principle and reason in the creatures of the earth. This region was the sphere of the Stars; and below it, in the Aristotelian system, was the planetary sphere, with the seven Planets (the sun and moon being reckoned among the number) moving in it. Both Stars and Planets he seems to have regarded as conscious, happy beings, moving in fixed orbits, and inhabiting regions free from all change and chance; and these regions formed the subject of his treatise On the Heavens. Next to this he is thought to have composed his treatise On Generation and Corruption, in order to expound those principles of physical change (dependent on the hot, the cold, the wet, and the dry) which in the higher parts of the Universe had no existence. This work formed the transition to the sublunary sphere,

---

5 Φυσικά Ακροατήρια Α, Β, κ.λα. Ακροατήριο means a scientific, as opposed to a popular, discourse or lecture.
6 The treatise On the Universe (Περὶ Σύμφωνων) which appears among the works of Aristotle, is spurious, being the compilation of some later Peripatetic.
7 De Oculo, l. iii. 13, &c.
immediately round the Earth, in which the meteors and comets moved, which was characterised by incessant change and by the passing of things into and out of existence, and which formed the subject of his Meteorologies. The last book of this treatise brings us down to the Earth itself, and indeed beneath its surface, for it discusses, in a curious theory, the formation of rocks and metals. From this point Aristotle would seem to have started afresh with his array of physiological treatises, the first written of which may very likely have been that On the Parts of Animals, as containing general principles of Anatomy and Physiology. Next it seems probable that the work On the Soul was produced. This, as Spengel points out, was not intended in the first instance to be a treatise on Psychology, but a physiological account of the vital principle as manifested in plants, animals, and men. A set of 'appendices,' as we should now call them, on various functions connected with life in general, such as Sensation, Memory, Sleep, Dreaming, Longevity, Death, &c., were added by Aristotle to his work On the Soul. Afterwards the ten books of Researches on Animals, and the five books On the Generation of Animals—together with the minor treatise On the Progression of Animals, and with a collection of Problems, which Aristotle probably kept by him, and added to from time to time—made up the series of Aristotle's Physiological and Physical writings, so far as he lived to complete them. Treatises On the Physiology of

\[\text{VOL. I.}\]

---

\[7 \text{Περὶ τὰ Ζῷα Ίστορίας Α, B, κ.τ.λ.}}\]

The work is always referred to under this title by Aristotle. The Latin name Historia Animalium is therefore a mistranslation. Out of this mistranslation, however, the term 'Natural History,' to denote a particular department of science, seems to have arisen.

\[8 \text{Prantl, in the Transactions of the Royal Academy of Munich, 1852, shows that while there is probably an Aristotelian nucleus to the collection of Problems which have come down to us under the name of Aristotle, the great bulk of the collection is by a variety of Peripatetic hands, and is full of inconsistencies.}\]
Plants and On Health and Disease had been promised by him, but were never achieved (see above, p. 68). Simultaneously with some of the works now mentioned, but in idea last of all his writings, the Metaphysics were probably in progress of composition when the death of Aristotle occurred. It seems strange that Valentine Rose should strenuously have argued in favour of the hypothesis that the Metaphysics were composed before the Physical writings of Aristotle. For, against this we may say that in four places of the Physical Writings questions are reserved to be discussed in the Metaphysics; that in twelve places of the Metaphysics the Physical writings are referred to; that in no work of Aristotle's are the Metaphysics quoted; that the very name Tà μετὰ τὰ Φυσικὰ embodies a strong tradition of antiquity, that Aristotle's Prima Philosophia, or Theology, followed his Physics both in idea and in order of composition; and finally, that there was another tradition of the ancients (see above, p. 30) to the effect that the Metaphysics were edited by Eudemus after the death of Aristotle, and indeed patched together by him, parts having been lost, or, as we might with probability conjecture, never having been completed. Such, or some such, having been the order in which the works of Aristotle were composed, we may observe, by comparing the probably subsequent with the probably prior writings, the following peculiarities:—(1) All the more general forms of the philosophy, such as the four causes, the opposition of the potential and the actual, the laws of the syllogism, the conception of the method of statement, &c., were pretty well cut and dried before the writing of any of the extant books commenced. (2) Even a consider-

---

10 Quoted by Bonitz, Ar. Metaphys.
11 Ib. p. 5.
able portion of the special matter of the separate treatises was stored up ready beforehand. Thus there is a rich instalment of ethical matter in the *Rhetoric*, of political matter in the *Ethics*, of metaphysical matter in the *Physical Discourse*, &c.; (3) But when Aristotle came to concentrate his mind on a particular subject he invariably made a great advance in the conception of it: thus the analysis of ethical phenomena in the *Ethics* goes far beyond that arrived at in the *Rhetoric*; 12 (4) Out of an ostensible regard for strict orderly arrangement and the due apportionment of subject-matter to the separate sciences, Aristotle constantly put off the solution of particular questions for ‘another’ or ‘a later’ enquiry. We say *ostensible*, because in some cases it looks as if the excuse were a convenient one for postponing questions to which he was not prepared with an answer. On the other hand, either from neglecting his own rules of method, or from not having as yet seen the limits of a particular science, and from having to write tumultuously and under pressure,—he sometimes launches out into not strictly appropriate discussions. Thus in the *Art of Poetry* he goes on into questions of Style, which belonged properly to the *Rhetoric*, and even into elementary questions of Grammar, which rather should have had a treatise to themselves. And in the work *On the Soul*, which is professedly a physiological 13 treatise, he transcends the limits of Physiology or Physics, and introduces discussions on the theory of Knowledge, on the relation of Subject to Object, on the

---

12 As, for instance, in the theory of the nature of Pleasure. See above, p. 245.

13 De An. 1, i. 15. Καὶ διὰ τοῦτο ἡδή φυσικοῦ τὸ διαργῆσαι περὶ ψυχῆς, ἢ πάντως, ἢ τῆς τουχῆς, ο.κ. in so far as its functions are dependent on material conditions. It is elsewhere implied that some functions of the soul may be not so dependent, and that these will be treated of by metaphysics (ib. § 19). § δὲ κεχωρισμένα ὅ πρῶτος φιλόσοφος.
Active and Eternal Reason, &c., which, so far as they go, are anticipations of his *Prima Philosophia*, or metaphysics. But these last-mentioned discussions are only partly anticipations, they are not complete or satisfactory in themselves, they are only fragmentary indications, and they stand to the entire metaphysical system which was afterwards to be expounded, as the forestallments of ethical doctrine in the *Rhetoric*, stand to the completion of that doctrine in the *Ethics* themselves. But the difference is, that the metaphysical system of Aristotle was, so far as we know, never completed. And thus the result of an examination of the works of Aristotle as a whole, seems to be, that while he was engaged in finishing off, according to his views, the exposition of each separate science, he was constantly deferring the greatest and deepest questions of all for final exposition in a system of Metaphysics, which was to form the key-stone of the entire arch. But of this final exposition only a fragment has reached us; probably no more than this fragment was ever composed, and the appearance it presents is such as to suggest the belief that Aristotle while composing it, at the end of his life, was still only feeling his way to a theory of the relation borne by God to Nature, the Universe, and the Human Soul.

With Aristotle's faults or merits as a Physicist we are not, for the present purpose, much concerned, for they do not affect his ethical system either one way or the other. But it may be mentioned here, in passing, that Aristotle's Physical Philosophy has been made the subject both of the most extravagant eulogy, and also of extreme disparagement.  

14 See Aristotle: a Chapter from the *History of Science*, by G. H. Lewes (London, 1854), pp. 154-155, where a specimen of these eulogies is given. Mr. Lewes himself furnishes an example of the opposite extreme, making the case against Aristotle's failures in physical science far worse than needs be.
On the one hand he has been spoken of as if he had anticipated many of the discoveries of modern times; on the other hand he has apparently been blamed for not having done so. But it should surely have been remembered that 'Truth is the daughter of Time,' and that this is especially the case with regard to the Sciences of Observation, which creep on from one vantage point to another. Aristotle, then, ought not personally to be blamed for the erroneous views of Astronomy, or even of Physiology, which he puts forth. In these he only represents a particular point in the general history of Science, arrived at more than 2,000 years ago. He doubtless added considerably, by his industry in collecting and storing up facts, to the knowledge of Natural History and Physiology previously existing, and by his masterly mapping out of the whole field of science he opened the way to a distinct and lucid enquiry into all parts of nature. It was only owing to political causes—to the influence of the Stoical and Epicurean schools taking men's minds in a different direction, to the decline of the Greek nation, and to the inferiority of the Roman intellect—that his example was not more fruitfully followed. Aristotle has been accused of 'explaining Nature by means of the syllogism:' but no one could have made this accusation who had ever read his works. He has also been accused of 'preaching Induction, while neglecting to practise it;' but this is far more undoubtedly true of Lord Bacon himself, who, however, gets boundless glory for what he preached, and no blame for his mistakes and failures in such small scientific enquiries as he essayed to make. Another fallacy of this kind consists in supposing that the early philosophies of Greece were superior as explanations

15 Bacon, Novum Organum.
16 By Professor Tyndall, in his Opening Address to the Meeting of the British Association at Belfast, August 1874.
17 Bacon, Nov, Org.
of Nature to the philosophy of Aristotle. The early systems were mere guesses based on some slight analogy of superficial facts. Thus, though they curiously anticipated by their conjectures some of the modern theories, yet they had no solidity or power of self-demonstration. They were a kind of 'false dawn' which appeared and faded away again. Thus the anticipation of the Nebular Theory by Anaximander, that of the Solar System by the Pythagoreans, that of the Atomic Theory by Democritus, and something like that of the theory of Natural Selection by Empedocles—were rejected by the general voice of Greece and by Aristotle. Aristotle's theories of an eternal universe, with the earth as its centre, and closed in by the periphery of the Heavens, were neither worse, nor better, than these. All Cosmologies in the fourth century B.C. were equally incapable of verification. Aristotle longed for Science, and strove after it; but the conditions of Science, as yet, did not exist. And yet, there are certain ultimate questions about the Universe in regard to which the thoughts of Aristotle have a value, even at the present day.

The most interesting notices of Aristotle's general views of Nature may be gathered from the second book of his Physical Discourse. He speaks of 'nature' as 'a principle of motion and rest implanted and essentially inherent in things, whether that motion be locomotion, increase, decay, or alteration.' 'It is absurd to try to prove the existence of nature; to do so would be to ignore the distinction between self-evident and not self-evident things.' 'Nature may be said

18 Nat. Aeus. ii. 2. "Παθολεγήμενα γράμματα καὶ αἱ ἑτέρας τοῦ κεραυνοῦ καὶ ἡμικρόνια ἐν ὑστάρχει πρῶτον καὶ αὕτη καὶ μὴ κατὰ συμβεβηκός.

19 Nat. Aeus. ii. 4. "Πεθαίνει ἡ φύσις περίπορος δεινότοιε, γελοῖον..." οὐ διατηρέων κράτους ἐκτὸς τοῦ δι' αὐτῆ καὶ μὴ δι' αὐτῆ γνωρίμων.

20 Nat. Aeus. ii. 8. "Ενα μὲν αὐτῷ τρόποιν οὕτως ἡ φύσις λέγεται, ἡ πρώτῃ ἐκάστη ὑποκείμενη ἐν τοῖς ἁχώτως ἐν αὐτῶι ἁρχή κυριακῶς καὶ μεταβολῆς."
in one way to be the simplest and most deep-lying substratum of matter in things possessing their own principle of motion and change; in another way it may be called the form and law of such things.' That is, nature is both matter or potentiality and form or actuality. It is also the transition from one to the other. 'Nature,' says Aristotle, 'spoken of as creation is the path to nature.' Again, 'Nature is the end or final cause.' In relation to this system of causation, it remains to ask what place is to be assigned to chance or the fortuitous, to necessity and to reason? 'Some deny the existence of chance altogether, saying that there is a definite cause for all things.' 'Others, again, have gone so far as to assign the fortuitous as the cause of the existence of the heaven and the whole universe.' 'Others believe in the existence of chance, but say that it is something mysterious and supernatural, which baffles the human understanding.' With none of these opinions does Aristotle seem exactly to agree. He will not hear of attributing the existence of the heaven and the divinest things that meet our eyes to blind chance. Again, while allowing the existence of chance as an undefined or incalculable principle of causation, and awarding to it a certain sphere, namely, things contingent, he does not appear to have believed in anything supernatural attaching to it. He distinguishes the fortuitous from chance, considering chance to be only a species of the former, and re-

stricted to the sphere of human actions. As a proof of this he alleges that 'good fortune is held to be the same or nearly so with happiness; now happiness is a kind of action, i.e. doing well.' Where there is no action, there is no chance. Hence no inanimate object, nor beast, nor child, does anything by chance, because it has no choice, nor have these either good or bad fortune, except metaphorically, in the same sense that Protarchus said 'the stones of the altar were fortunate, because they were honoured.' The fortuitous and chance both are merely accidental, and not essential principles of causation; they therefore presuppose the essential, since the accidental is posterior to and dependent on the essential. Therefore of whatever things chance may be the cause, it necessarily follows that nature and reason, which are essential causes, should be presupposed—that they should be in short the causes of the universe.

Has necessity, then, a conditional or an absolute sway in relation to nature? To say that it had an absolute sway, would be equivalent to assigning as the cause of the existence of a wall that the heavy stones must be put at the bottom and the light stones earth a-top. In reality, however, this necessity in regard to the wall is only a necessary condition, not a cause, of the making of the wall. Given a certain end, and certain means to this are necessary; thus far and no

27 Nat. Ansc. ii. vi. i. Διὸ καὶ ἀνάγκη περὶ τὰ πράκτα εἶναι τὴν τόχην: σημεῖον ἦν διὸ διότι οὐκ ἦν οὐδὲν εἶναι τῇ ἐκδιαιμονῇ ἡ εἴσοδος ἡ ἐγκέφαλος, ἡ δ’ ἐκδιαιμονὴ πρὸς τις εὐπραξία γάρ.
28 Nat. Ansc. ii. vi. 8. "Υπερανπ ἡ ἀνάγκη τῶν αὐτόματων καὶ τῆς τόξου καὶ τοῦ καὶ φόδων; ἢ ἦν διότι μᾶλλον τοῦ ὁμοίου αὐτῶν τῶν αὐτόματων, ἀνάγκη πρὸς τούτον νῦν καὶ φόδων αὐτῶν εἶναι καὶ άλλων πολλών καὶ τοῦ ἄλλου πάντως.
29 Nat. Ansc. ii. ix. 1. Τὸ δ’ ἢ ἀνάγκη πρὸς τῶν νῦν ὑποθέσεως ὑπάρχει ἡ καὶ ἀπώλεια; Ὅσο μὲν γὰρ ὁμοίως τὸ εἰς ἀνάγκης εἶναι ἐν τῇ γενέσει, ἐσπερ ἢ εἰ τῶν τοιχῶν ἢ ἀνάγκης γεγονόται νέως, δι’ αὐτὰ μὲν βαθία κατ’ ἐκείνης φέρονται τὰ δε κούφα ἐπικαλεῖ.
30 Nat. Ansc. ii. ix. 2. Οὐκ ἀνεύ μὲν τῶν ἀναγκασῶν ἐξορίσων τὴν φόδων, οὐ μέντοι γε διὰ ταῦτα ἄλλα ἢ ὡς θλίμων, ἄλλαι ἐκεῖνοι τοῦ.
farther has necessity a sway in regard to nature. But the end is the real cause, the necessary means are a mere subordinate condition.

Lastly, What is the position of design or intelligence in relation to nature? Some reduce all nature to a mechanical principle; if they recognise any other principle at all (as Empedocles spoke of 'love and hatred,' and Anaxagoras of 'reason'), they just touch it and let it drop.\textsuperscript{31} They say it rains, not that the corn may grow, but from a mechanical necessity, because the vapours are cooled as they are drawn up, and being cooled are compelled to fall again, and by coincidence this gives growth to the corn.\textsuperscript{32} 'Why should it not also be by accident and coincidence, they ask, that in the teeth of animals, for instance, the front teeth grow sharp and suitable for cutting, while the hind teeth grow broad and suitable for grinding?' Hence their theory is, that whenever blind necessity did not hit by coincidence on results as perfect as if they had been designed, its products perished, while the lucky hits were preserved; and thus Empedocles says that whole races of monsters perished\textsuperscript{33} before a perfect man was attained.

Aristotle says, 'It is impossible that this theory can be true;\textsuperscript{34} our whole idea of chance and coincidence is something irregular, out of course of nature, while nature is the regular and the universal. If, then, the products of nature are either according to coincidence or design, it follows that they must be according to design. We see how a house is built; if that house were made by nature, it would be made in exactly the same way, i.e. with design, and according

\textsuperscript{31} Nat. Ansc. ii. viii. i. Kal γάρ ὁμ θιλιν αὐταν εὑσσειν, ἑπον ἄμφε- μοι χάριν ἐστιν, ἃ ὑμν τὴν θελων καὶ τῇ νεκρῶν, δὲ δὲ τὸν νοόν.
\textsuperscript{32} Nat. Ansc. ii. viii. 2.
\textsuperscript{33} Nat. Ansc. ii. viii. 4. Ὑσα δὲ μὴ οὕτων, ἁπάλωτο καὶ ἁπάλωτος, κα- θάκερ Ἐμπεδοκλῆς λέγει τὰ βουγενη ἁδράξωμα.
\textsuperscript{34} Nat. Ansc. ii. viii. 5-10.
to a regular plan. The same adaptation of means to ends, we see in the procedure of the animals which makes some men doubt whether the spider, for instance, and the ant do not work by the light of reason or an analogous faculty. In plants, moreover, manifest traces of a fit and wisely planned organisation appear. The swallow makes its nest and the spider its web by nature, and yet with a design and end; and the roots of the plant grow downwards and not upwards, for the sake of providing it nourishment in the best way. It is plain, then, that end and design is a cause of natural things. And if nature be figured both as matter and as end, we may surely regard the matter as a mere means to an end, and the end itself as really and essentially the cause. The failures of nature, the abortions and monsters which Empedocles spoke of as if they were the normal products of nature, are in reality its mere exceptions. They are mistakes and errors, exactly analogous to the failures in art. It is absurd to doubt the existence of design because we cannot see deliberation actually taking place. Art does not deliberate. If the art of ship-building were inherent in the wood, ship-building would be a work of nature. Perhaps the best conception we can have of nature is, if we think of a person acting as his own doctor and curing himself.\textsuperscript{\textit{35}}

On these views of Aristotle's several observations at once suggest themselves. They contain a recognition quite as strong as that in Paley's \textit{Natural Theology} of the marks of design in creation. But we see that it is possible to recognise these marks of design, and to be led by them to a different view from that of Paley; that Aristotle does not discover in them, as it were, the works of a watch, and proceed immediately to infer the existence of a watchmaker;

\textsuperscript{35} Nat. Anim. ii. viii. 15. Μᾶλλον δὲ οὐκ ἔστων τις ἐνεργήν ἄλοχος ἐκ νόμων καθελθὼν ἐν τῷ φύσει.
but rather that the products of nature appear to him according to the analogy of a watch that makes itself. If we ask, how it is that the watch makes itself? Aristotle would reply, that all things strive after the good; that on the idea of the good, as seen and desired, the whole heavens and all nature depend. Aristotle views the world with a kind of natural optimism. He says (Eth. i. ix. 5), 'All things in nature are constituted in the best possible way.' If we ask, what is it that perceives the good—what gives to nature this eye of reason to perceive an idea and to strive after it?—on this head Aristotle is not explicit. He says there is something divine in nature. 'Even in the lower creatures there is a natural good above their own level, which strives after the good proper for them.' We see the indistinctness of this phrase. He speaks of 'the natural good' striving after 'their proper good.' If it be said that Aristotle's theory is Pantheism, this would not be exactly true, for Aristotle does not identify God with nature, nor deprive Him of personality. But what the relation is of 'the divine' in nature to God, it must be confessed that Aristotle does not make clear. We only see that Aristotle, while tracing design, beauty, and harmony in the world, is not led to figure to himself God as the artist or architect of this fair order, but as standing in a different relation to it. If we ask, how can the beginning be accounted for, how did the watch begin to make itself? Aristotle would say, in looking back we do not find in the past merely the elements (δύναμις) of a watch, we find of necessity the idea and the actuality (ἐνέργεια) of the watch itself (see above, p. 238). A perfect watch must always precede the imperfect one. It is impossible to think

35 Eth. x. ii. 4. "ἐσεϊ δὲ καὶ ἐν τοῖς φαίλοντες ἐστι τε φωικὸν ἀγαθόν κρείττον ἢ καθ' αὐτά, ἢ ἐφίται τοῦ ὀικεῖου ἀγα-

36 A similar doctrine is given in the Eudemian Book, vii. xiii. 6.
of nature as having had a beginning. 'The universe is eternal' (Eth. iii. iii. 3). 'The parts may be regarded as changeable, but the whole cannot change, it is increate and indestructible' (De Caelo, i. x. 10).

One of the most interesting points to notice in this part of the subject is the way in which Aristotle regards man in relation to nature as a whole. His view appears to be two-fold; on the one hand he regards man as a part of nature. He says, 'You may call a man the product of a man, or of the sun.' He looks at the principle of human life as belonging to the whole chain of organised existence. Man has much in common with the animals and the plants. On the other hand, he looks at the human reason and will as a principle of causation, which is not part of nature, but distinct. 'Man,' he says, 'is the cause of his own actions.' Thus he classifies causation into 'nature, necessity, chance, and again reason and all that comes from man' (Eth. iii. iii. 7).

In art and in action the efficient cause rests with the maker or doer, and not as in nature with the thing done.' Aristotle's Ethical theory depends on this principle, that the moral qualities are not by nature, i.e. self-caused, but produced in us in accordance with the law of our nature, by the exercise of will, by care, cultivation, and in short the use of the proper means. We have already observed (see above, p. 149) that one of the first steps of Grecian Ethics, as exhibited in the philosophy of Archelaus and Democritus, consisted in severing man and human society from the general framework of nature. This Aristotle follows out in his Ethics, and he seems so easily to content himself with the

37 "Ποτ' οὖν τὸ δὲν χωράμενον ὑπὸ δὲν μὲν ὑπὸ τῷ θείῳ διατίθεται καὶ διακατάζονται, ἢ δὲ τοῦ διὸν σύνθετον τὸ κάθοι καὶ αὐθαίρετο, οὐκ ἂν ὁ κόσμος γένοιτο καὶ φθόριοθε, ἀλλ' αὐτοῖς.

88 Nat. Anim. ii. ii. 11. "Ἄνθρωπος γὰρ ἄνθρωπον γεννᾶ τοῦ κληρονομοῦ.

89 See Eudemus, Eth. vi. iv. 4.
practical assumption of freedom for man, as to give a narrow and unphilosophical appearance to part of his writing.

While, however, assuming freedom for human actions, Aristotle seems to do so, not so much from a sense of the deep importance of morality, but rather from an idea of the slightness of man and of his actions in comparison with nature, and what he would call the ‘diviner parts’ of the universe. There is a strange passage in his *Metaphysics* (XI. x. 2–3), which is obscure indeed, but it seems to bear on the question. He says, 40 ‘All things are in some sort ordered and harmonised together, fishes of the sea, birds of the air, and plants that grow, though not in an equal degree. It is not true to say that there is no relation between one thing and another; there is such a relation. All things are indeed arranged together towards one common centre; but as in a household the masters are by no means at liberty to do what they please, but most things, if not all, are appointed for them, while the slaves and the animals do but little towards the common weal, and mostly follow their own fancies. For so the nature of each of the different classes prompts them to act.’ This curious metaphor seems to represent the universe as a household. The sun and stars and all the heaven are the gentlemen and ladies, whose higher aims and more important positions in life prevent any time being left to a merely arbitrary disposal; all is filled up with a round of the noblest duties and occupations. Other parts of the universe are like the inferior members of the family, the slaves and domestic animals, who for most part of the

---

40 Πάντα δὲ συντέκταται πως, ἀλλ' ἀψι οὐκ ἐποίησα, καὶ πλωτὰ καὶ πτημα καὶ φυτά; ἀλλ' ἀψι ἀπεσεῖ ἠχει ἠτένα μὴ εἰς τὸν βοτέρος τὰ πάντα τὰ μικρὰ πᾶσαν μηθείς, ἀλλ' ἐστί τι. Πρῶς μὲν γὰρ τὸ ἀπαντά συν-

τέκτατα, ἀλλ' ἔσοπε ἐν ὑπὸ τοὺς ἀνθρώπους ἤκοις ἤπειροι τὶς ἤπειροι τοιοῦτοι ποιεῖν καὶ τὰ πλέον τὰ νοῦν ἄσχέ τις ἄρχειν, τὸ ἵπτεν τὸ καῦμα, τὸ ἠτένα καὶ τὸ ἐπειδὴ ὁ ἄρχοντα τοιοῦτον γὰρ ἐκείστοι, άρχην ἀνθρώπων ἢ φύσεως ἤστιν.
day can sleep in the sun, and pursue their own devices. Under this last category it seems almost as if man would be here ranked. Aristotle does not regard the unchanging and perpetual motion of the heavenly bodies as a bondage, but rather as a harmonised and blessed life. All that is arbitrary (διός στοιχεῖον) in the human will, Aristotle does not consider a privilege. And man (especially in regard of his actions, the object of φρόνησις and πολιτικὴ) he does not think the highest part of the universe; he thinks the sun and stars 41 'far more divine.' This opinion is no doubt connected with a philosophical feeling of the inferiority of the sphere of the contingent, in which action consists, and with which chance intermixes, to the sphere of the absolute and the eternal. In this feeling Plato shared, but in Plato's mind there was set against it, what Aristotle seems deficient in, a deep sense of the even eternal import of morality. To the heavenly bodies both Plato and Aristotle appear to have attributed consciousness, which explains in some degree the sayings of Aristotle. We see, however, that there was necessarily something peculiar, contrasted with our views, in the way Aristotle approached Ethics. He might, indeed, seem to coincide with the utterance of the Psalmist, 'What is man in comparison with the Heavens?' But with him the Heavens were not a mere physical creation; rather the eternal sphere of Reason, the abode of pure Intelligences, the source of all emanations of Reason and Intelligence throughout the world. Compared with this higher sphere individual man, with his practical and moral life, appeared insignificant; and yet the End-in-itself, even for the individual, Aristotle acknowledged to be worth an effort, while man in organised societies, in the city or the nation, he recognised as affording scope for the realisation of something more noble and divine.

41 So Eudemus, Eth. vii. viii. 4.
ARISTOTLE’S CONCEPTION OF GOD.

(ETH. I. II. 8. ἁγαπητῶν μὲν υπὸ καὶ ἐνι μόνῳ [i.e. τὸ τέλος], καλλίου δὲ καὶ θεότερον ἐθνικαὶ καὶ πόλεσιν). But again, the individual man, according to Aristotle, shared in that Reason which is the divinest part of the Universe, and by development of this into philosophy he could become like to God (see ETH. X. VII. 8). Thus there were two human things about which Aristotle could be enthusiastic—the life of an ideally well-ordered state, and the moments of philosophical consciousness in the mind of an individual thinker.

We can never, perhaps, adequately comprehend Aristotle’s philosophical conception of the Deity. The expression of his views that has come down to us seems so incomplete, and contains so much that is apparently contradictory, that we are in great danger of doing Aristotle injustice. Even had we a fuller and clearer expression, there might be yet something behind this remaining unexpressed, as an intuition in the mind of the philosopher. The first thing we may notice is Aristotle’s idea of ‘Theology’ as a science. In classifying the speculative sciences, he says (METAPHYS. X. VII. 7), ‘Physics are concerned with things that have a principle of motion in themselves; mathematics speculate on permanent, but not transcendental and self-existent things; and there is another science separate from these two, which treats of that which is immutable and transcendental, if indeed there exists such a substance, as we shall endeavour to show that there does. This transcendental and permanent substance, if it exists at all, must surely be the sphere of the divine—it must be the first and highest principle. Hence it follows that there are three kinds of speculative science—physics, mathematics, and theology.’ In the same strain he speaks in the succeeding book (METAPHYS. XI. VIII. 19), as if the popular polytheism of Greece were a mere perverted fragment of this deeper and truer ‘Theology,’ which
he conceives to have been, in all probability, perfected often before in the infinite lapse of time, and then again lost. He says, The tradition has come down from very ancient times, being left in a mythical garb to succeeding generations, that these (the heavens) are gods, and that the divine embraces the whole of nature. And round this idea other mythical statements have been agglomerated with a view to influencing the vulgar, and for political and moral expediency; as, for instance, they feign that these gods have human shape and are like certain of the animals; and other stories of the kind are added on. Now, if any one will separate from all this the first point alone—namely, that they thought the first and deepest grounds of existence to be gods—he may consider it a divine utterance. In all probability, every art and science and philosophy has been over and over again discovered to the farthest extent possible, and then again lost, and one may conceive these opinions to have been preserved to us as a sort of fragment of those lost philosophies. We see then to some extent the relation of the popular belief to those ancient opinions. Aristotle having thus penetrated to a conception, which he imagined to lie behind the external and unessential forms of the Grecian religion, that is, the conception of a deep and divine ground for all existence, proceeds now to develope it

42 Παράδεδοται δὲ παρὰ τῶν ἀρχαῖων καὶ παρακελευμένοις τοῖς διάφοροι τοιούτων ὑπὸ τῆς θεοῦ τῆς εἰς εἰς τὸν θεόν τὸν θεόν καὶ περιέχει τὸ ώς τὸν ήλιον φόντων. Τὰ δὲ λατρεύαντες ἦδον προσήκοντα πρὸς τὴν πεθανόν τῶν πολλῶν καὶ πρὸς τὴν εἰς τὸν νόμον καὶ τὸ συμφόριον χρήσιν: ἄνθρωποι προσεύχοντες τὸ γὰρ τούτου καὶ τῶν ἄλλων ξύων διότι τοῖς λέγοντες καὶ τοῦτον ἐπερ οἰκουμένη καὶ παραστάσει τοῖς εἰρημένοι. Ὁ μὲν οὖν παρὰ τὸν πρώτον ἡμῶν μικρὸν μύθον, καὶ παρὰ τῶν πρώτων ἡμῶν μικρόν ἡμῶν μικρὸν. Cf. Pol. v. vi. 21, and Plato, Politics, 270, Laws, 677 A. Τὸ πολλὰ ἄνθρωποι γεγονότα καταλιμένοι τοι τῷ κόσμῳ καὶ ἀλλοῖ πολλοῖς ἐκδικοῦ τῇ τῶν ἀνθρώπων λείπεσα τῇ γένοις.
for himself, and in doing so, he lays down the following positions (Metaphys. xi. vi.–x.).

(1) It is necessary to conceive an eternal immutable existence, an actuality prior to all potentiality. According to this view, all notions of the world having sprung out of chaos must be abandoned. God is here represented as the eternal, unchangeable form of the whole, immaterial (ἀνευ δικαίωματος), and free from all relation to time.

(2) With this idea it is necessary to couple that of the source of motion, else we shall have merely a principle of immobility. We must therefore conceive of a ceaseless motion; this motion must be circular, no mere figure of philosophy, but actually taking place. Thus the highest heaven with its revolutions must be looked on as eternal. In this we make a transition to the world of time and space. The succession of seasons and years flows everlastingly from the motion of the circumference of the heavens. It would seem as if we were thus attributing local and material conditions to the Deity himself; if we say that God moves the world by moving the circumference of the heaven. But here, again, Aristotle is saved from this conclusion by merging physical ideas into metaphysical. He says, 'The mover of all things moves them without being moved, being an eternal substance and actuality, and he moves all things in the following way:—the object of reason and of desire, though unmoved, is the cause of motion.'

(3) God has been thus represented as the cause of all things by being the object of contemplation and desire to nature and the world. In this doctrine, as before mentioned, there is something unexplained; for to attribute thought and rational desire, as well as the power of motion, to nature,
seems really to place the Deity in nature as a thinking subject, as well as outside nature in the form of the object of thought and wish. Aristotle, however, does not explicitly do so; in relation to nature he seems to represent God only as an object, and he now passes on to depict God in relation to Himself as a subject, as a personal being, possessing in Himself conscious happiness of the most exalted kind, such as we can frame but an indistinct notion of, by the analogy of our own highest and most blessed moods. This happiness is everlasting, and God 'has or rather is' continuous and eternal life and duration.46

(4) Aristotle next reverts to the impersonal view of God, and asks whether these principles are one or manifold? Whether there be one highest heaven or more than one? He concludes that there can be one only, for multitude implies matter, and the highest idea or form of the world must be absolutely immaterial.47

(5) But again, figuring to ourselves God as thought; on what does that thought think? Thought thinking upon nothing is a contradiction in terms; thought with an external object is determined by that object. But God as the supremest and best cannot be altered or determined by an external object. With God, object and subject are one; the thought of God is the thinking upon thought.48

(6) Lastly, how is the supreme good of the world to be represented—whether as existing apart from the world, like the general of an army, or as inherent in the world, like the

46 See above, p. 243, note.
47 Metaphysics, xi. viii. 18. Τὸ δὲ τὸ ἐν τῷ τόπῳ δύναται ἀπεικονισθῆναι τῷ θεῷ. τοῦτο γὰρ ἄργον ἐστὶν.
48 Metaphysics, xi. ix. 4. Αὕτη δὲ γὰρ ζῷον ἐίναι ἐστὶν καὶ ἐν τῷ τόπῳ καὶ ἐν τῷ τόπῳ καὶ ἐν τῷ τόπῳ.
discipline of an army? In other words, are we to hold that the Deity is immanent or transcendent? Aristotle gives no direct answer to this question; but seems to say that God must be conceived of both ways, just as the army implies both discipline and general, but it is the general who produces the discipline. In these speculations we see an attempt made by Aristotle to approach from various sides the metaphysical aspect of the existence of the Deity. All metaphysical views of God are entirely foreign to most minds. The profound difficulty of them may be appreciated, if we set before ourselves this question, for instance, If the Deity be immaterial, how can He act upon a material universe? Aristotle does not appear to make any endeavour to obtain a complete view, or to reconcile the contradictions between his different statements,—between the impersonal view of God as the chief good and object of desire to the world, and the personal view of Him as a thinking subject. He acknowledges these two sides to the conception, 'the discipline in the army' and 'the general ruling the army,' but does not attempt to bring them together.

In the *Ethics* there are several popular and exoteric allusions to 'the gods,' as, for instance, that 'It would be absurd to praise the gods' (I. xii. 3); 'The gods and one's parents one cannot fully requite, one must honour them as much as possible' (IX. ii. 8), &c. There are also some traces of Aristotle's thoughts as a metaphysician; for instance, he speaks of 'the good under the category substance' being 'God and reason' (I. vi. 3). And he gives an elaborate argument (X. viii. 7) to demonstrate that speculative thought and the

---

49 Metaphys. xi. x. 1. Ἑπισκεπτόμεν ἣν καὶ ποτέρως ἔχει ἢ τοῦ διὸν φυσιν ἢ τὸ ἀγαθὸν καὶ τὸ ἔργαν, πότερον κεχρυσμένον τι καὶ αὐτῷ καθ' αὑτό, ἢ τὴν τάξιν, ἢ ἀμφοτέρως ἔσπερ στρα-
exercise of the philosophic consciousness is the only human quality that can be attributed to the Deity. In this argument it is observable that he first begins by speaking of 'the gods,' saying, 'We conceive of the gods as especially blessed and happy. What actions can we attribute to them? whether those of justice? but it would be absurd to think of their buying and selling;' &c. He then argues that 'If life be assigned to them, and all action, and still more, all production, be taken away, what remains but speculation?' And he concludes, 'The life of God then, far exceeding in blessedness, can be nothing else than a life of contemplation.' Thus he reverts to a monotheistic form of speaking, though he says again afterwards, 'The gods have all their life happy, man's life is so, in as far as it has some resemblance to the divine consciousness of thought.' This passage then contains a sort of transition from exoteric to philosophical views. Aristotle attributes to 'the gods' that same mode of existence, which in his own metaphysical system he attributed to God, according to the deepest conception that he had formed of Him.\cite{fn56}

It is true, however, that in assigning speculative thought to the Deity, there is no mention made of the distinction which exists between the thought of the philosopher where object is distinct from subject, and the thought of God in which subject and object are one.

The passage to which we are referring in the *Ethics* contains not only a positive assertion with regard to the nature of God, but also a negative one. It asserts that all moral virtue is unworthy of being attributed to God. This, as we have before noticed (see above, p. 214), was a total departure

\footnote{\textit{The same point of view is maintained in the Eudemian Book, vii. xiv. 8. 'Hence God enjoys ever one and the same pleasure; that is, the deep consciousness of immutability.' In the \textit{Magna Moralia}, ii. xv. 3–5, there is a reaction against these speculations. See above, p. 36.}
from the view of Plato. Still more opposed is this view of Aristotle to modern ideas. We are accustomed to feel that however great may be the metaphysical problems about the nature of God, the deepest conception of Him that we can attain to is a moral one.

There are yet two other passages in the *Ethics* where theological considerations are entertained. These are both connected with the question of a divine providence for and care of men. The first is where it is asked (*Eth.* 1. ix. 1) whether happiness comes by divine allotment (*κατά τίνα θείαν μοῖραν*) or by human means. The second is where the philosopher is spoken of (v. viii. 13) as being most under the favour of God (*θεοφιλέστατος*). With regard to Aristotle’s general views of the question of providence, it is often argued that he must have denied its existence, inasmuch as he attributes no objective thought to God. But Aristotle does not himself argue this way; when the question comes before him, he does not appeal to his own *à priori* principle, and pronounce contrary to the general belief—rather he declines to pronounce at all. In the former of the two passages mentioned, he says, ‘One would suppose that if anything were the gift of God to men, happiness would be so, as it is the best of human things. But the question belongs to another science. Happiness, if not sent by God, but acquired by human means, seems at all events something divine and blessed.’ The latter part of this argument partly seems to be a setting-aside of the question, partly to be a sort of reconciliation of the existence of a providence (*θείου τι*) with the law of cause and effect. In the second passage Aristotle repeats from Plato the assertion that the philosopher is under the favour of heaven (*θεοφιλέστατος*). He says, ‘If there is any care of human things by the gods, as there is thought to be (*διότερ δοκεῖ*), we may conclude that they take pleasure
in the highest and best thing, reason, which is most akin to themselves, and do good to those who cherish and honour it.' In these words there may possibly be an esoteric sense, meaning that the philosopher in the exercise of his thought realises something divine. Aristotle may imply that the popular doctrine of providence admits a deeper explanation, but he by no means here or elsewhere denies it. Nor can we presume to tell what Aristotle would include in his conception of the subject-object thought of God. As we saw before, he is not explicit as to the relation of God to nature, neither is he as to the relation of God to man.

If we ask now, What were Aristotle's opinions as to the nature of the human soul, so far as we can gather them? we find that (advancing, as he shows us, upon the more or less indistinct views of his predecessors) he conceives of the ψυχή as a vital principle manifesting itself in an ascending scale through vegetable, animal, and human life. To this scale of life Aristotle appeals in the Ethics (1. vii. 10–12). He there argues that man must have some proper function. 'This cannot be mere life in its lowest form, i.e. vegetable; nor again merely sensational, i.e. animal life; there remains therefore the moral and rational life.' From this point of view man is regarded as part of the chain of nature. Aristotle doubts, but on the whole concludes, that the ψυχή is the proper subject of physical science. This he justifies by the fact that the psychical phenomena, anger, desire, and the like, are inseparable from the body, and from material conditions. Reason itself, if dependent on conceptions derived from the sense (μὴ ἄνευ φαντασίας), will fall under

---

41 De Animā, ii. iv. 2.
42 De Animā, i. i. 18.
43 De Animā, i. i. 11. Φαντασία, ἐὰν τῶν πλείστων ἁθέναν ἄνευ σάματος, ἄθαντες οὐκ οἰκεῖσθαι, οἱ θαλάσσαι, ἐπιστομίαν, ἕνα γὰρ νοοτροπίαν. Cf. i. i. 15. τὰ πάντα λόγον ἐνδολε ἐσίν.
the same head. Following out this direction of thought, Aristotle defines the \( \psi\chi\) to be ‘The simplest actuality of a physical body, which potentially possesses life, that is, of an organic body.’ Of the meaning of the word \( \epsilonνελέχεια \), used here, we have spoken above (see p. 234); the whole of this definition we see accords with Aristotle’s physical philosophy in general, which conceived great and beautiful results coming out of physical conditions, not by any mechanical system of causation, rather that these ends necessitated the means; the whole was prior to and necessitated the parts. The \( \psi\chi\), says Aristotle, is to the body as form to matter,\(^55\) as the impression to the wax, as sight to the eye. It is the essential idea of the body (τὸ τι ἦν ἐλαι τῷ τοιῷ σώματι). It is as the master\(^56\) to the slave, as the artist to the instrument. It is the efficient, the final, and the formal cause of the body. It is impossible to treat of the \( \psi\chi\) without taking account of the body; ‘as to the Pythagorean doctrine of the transmigration of souls, they might as well speak of the carpenter’s art clothing itself in flutes. For a soul \(^57\) can no more clothe itself in a foreign body, than an art can employ the instruments of some foreign art.’ While maintaining this close connection between the \( \psi\chi\) and the body, as between end and means, Aristotle was kept aloof by the whole tenour of his philosophy from anything like materialism. He sums up this part of his reasonings in the following words:—\(^4\) That the \( \psi\chi\), therefore, is inseparable from the body is clear, or at all events some of its parts, if it be divisible. Nothing,\(^58\) however, hinders that some of its

\(^{54}\) De Anima, II. i. 6. Δε ψυχή ἐστιν ενέλέχεια ἡ πρώτη σώματος φυσικὸν δυνάμει ἐκών ἐχοντας. Τοιῶτα δὲ, δὲ ἰν ἦς ὄργανοι.

\(^{55}\) De Anima, II. i. 7.

\(^{57}\) De Anima, I. iii. 26. Παρακλησιον δὲ λέγουσι βδομεν εἶ τις φαίνει τὴν τεκτονικὴν εἰς αὐθαίρετα. δεῖ γὰρ τὴν μὲν τέχνην χρῆσαι τοῖς ὄργανοις, τὴν δὲ ψυχὴν τῷ σώματι.

\(^{58}\) De Anima, II. i. 12. Οὐ μὴν ἄλλο
parts may be separable from the body, as not being actualities of the body at all. Moreover, it is not certain whether the ψυχή be not the actuality of the body in the same way that the sailor is of the boat.'

Here then is the point at which the interest in Aristotle's conception of the ψυχή begins for us. As long as the soul is described as bearing the relation to the body of sight to the eye, of a flower to the seed, of the impression to the wax, we may be content to consider this a piece of ancient physical philosophy. Our interest is different when the soul is said to be related to the body 'as a sailor to his boat.' But here is the point also where Aristotle becomes less explicit. Having once mooted this comparison, he does not follow it up. The only further intimations of his opinion that he affords us are to be found in the places where he speaks of 'those parts of the ψυχή which are not actualities of the body at all.' A striking notice on this subject is to be found in his treatise De Generatione Animalium

(π. iii. 10), where he argues that 'The reason alone enters in from without, and is alone divine; for the realisation of the bodily conditions contributes nothing to the realisation of its existence.' We have had before a contradictory point of view to this, in the saying that 'Reason may be looked on as dependent on conceptions derived from the senses,' which is also elsewhere repeated. But this contradiction is reconciled in Aristotle's account of the two modes of reason, the receptive or passive (νοῦς παθητικός), and the creative or active (νοῦς ποιητικός). 'These two modes,' he says, 'it is necessary should be opposed to each other, as matter is opposed everywhere to form, and to all

---

39: Εὐνᾶ γας ὅλ(lo)ς καλῶς, ἅπα τὸ μητέριον ἐκεῖνον σώματος ἐνέσχεται. Ἐκι δὲ ἔθελον εἰς οὕτως ἐνεργείαν τὸ σώματος ἢ ψυχή διατερέχῃ πλατῆρ πλατῆρ. 39: Ναῦται δὲ τὸν νοῦν μόνον θρόματι ἐνεργείαν καὶ θεῖον ἐκεῖνον ἀλλὰ εἰς τῇ ἐνεργείᾳ κοινωνεῖ σωματικῆ ἐνέργεια.
that gives the form. The receptive reason,\(^{60}\) which is as matter, becomes all things by receiving their forms. The creative reason gives existence to all things, as light calls colour into being. The creative reason transcends the body, being capable of separation from it, and from all things; it is an everlasting existence, incapable of being mingled with matter, or affected by it; prior and subsequent to the individual mind. The receptive reason is necessary to individual thought, but it is perishable, and on the other hand the higher and immortal reason carries no memory with it, because it is unimpressible (οὐ μνημονεύομεν δὲ, ὅτι τούτο μὲν ἀπαθῆι).

In the *Ethics* this distinction between the Active and the Passive Reason is not entertained. The reason is there spoken of in its entirety, as containing in itself the synthesis of the two opposite modes. It is spoken of as constituting in the deepest sense the personality of the individual.\(^{61}\) On the other hand, it is spoken of as something divine, and akin to the nature of God.\(^{62}\) The evocation of this into consciousness constitutes what Aristotle calls 'the divine' in happiness; it gives us, according to him, a momentary glimpse of the ever-blessed life of God.

But the above-quoted passage from the third book of the Treatise *On the Soul* has made more sensation in the world than all the rest of the writings of Aristotle put together. After slumbering quietly, perhaps much of the time in the cellar at Scepsis, this sentence was brought out into

prominence by Alexander of Aphrodisias, at the end of the second century A.D., and gave rise to innumerable controversies, which lasted not only during the final centuries of Greek philosophy, but also all through the Middle Ages. Averroes and his followers in the Arabian school made it the basis of a doctrine of Monopsychism, to the effect that the Active Reason is one, undivided, substance; that it is one and the same in Socrates, Plato, and all other individuals; whence it follows that individuality consists only in bodily sensations, which are perishable, so that nothing which is individual can be immortal, and nothing which is immortal can be individual. These doctrines spread from the Arabs to the Jews of Spain, and from them to the Christian schools, and Averroism became a leaven in the Scholastic philosophies, causing, as might be expected, the most virulent strife between the opponents and supporters of the theory of Monopsychism. This all arose from a pushing out an isolated sentence of Aristotle's to its extreme logical consequences.

The same text has of late again been made to furnish hard and dogmatic conclusions, coinciding almost verbally with those of Averroes. Grote, in his Aristotle (vol. ii. p. 233) says, 'The theorising Nous, as it exists in Socrates, Plato, Demokrites, Anaxagoras, Empedokles, Xenokrates, &c., is individualised in each, and individualised differently in each. It represents the result of the Intellectus Agens or Formal Nous, universal and permanent, upon the Intellectus Patiens or noetic receptivity peculiar to each individual; the co-operation of the two is indispensable to sustain the theorising intellect of any individual man. But
the *Intellectus Patiens*, or *Receptiveus*, perishes along with the individual. Accordingly the intellectual life of Socrates cannot be continued farther. It cannot be prolonged after his sensitive and nutritive life has ceased; the noetic function, as its exists in him, is subject to the same limits of duration as the other functions of the soul. The intellectual man is no more immortal than the sensient man," &c.

These conclusions, however, have been drawn for Aristotle and never by him. In the passage now referred to, the words ὦ ἄνθρωπον ἔτει, ὅτι τὸ τάσιν μὲν ἀπάθειαν were probably only meant as an argument, in passing, against Plato’s doctrine of ἀνάμνησις. This doctrine, says Aristotle, cannot be true, because the Active Reason which existed elsewhere before our birth, receives no impressions, therefore we cannot be said to recollect things seen by the Reason in its antenatal state. Logically, of course, this argument may be carried further, and it may be said that, according to Aristotle, the Reason in surviving death will carry no recollections, i.e. no individuality with it.

Only Aristotle himself does not say so. When at the beginning of the treatise *On the Soul* he says 'All nature yearns after immortality, but, being unable to attain this in the individual, she attains it in the species' 64 he is writing, as aphysiologist, of the whole animated kingdom of nature. The question of what we mean by the immortality of the soul, was one for metaphysics, or as he called it 'theology.' And such questions he was always putting off. Therefore we are left in doubt as to his views, or as to whether he had decided views. And people are accordingly at liberty to

64 *De An. ii. iv.* Ἐστὶ δὲν κοινωνία ἀναγνωρίζει τὸν ἄνθρωπον τῇ νόησεῖ, διὰ τὸ μηθέν ἐνδεχόμεθα τῶν φαντάσματι τῆς ἀναγνώρισιν ἐν ἀριστοκρατείᾳ διαμένειν.
believe a good deal as they may wish on the subject. Spengel thinks that too much stress should not be laid on the ‘brief and obscure’ intimations regarding the διανοητική ψυχή which occur in a treatise on η ψυχή η τῶν ζωῶν and he approves of the saying of an unknown ancient Anonym. de vitā Pythag. p. 112), ‘Plato and Aristotle equally declare the soul to be immortal, however much some, who do not fathom the mind of Aristotle, think that he pronounces it to be mortal.’ This, however, is going farther than any data warrant us in following. Torstrik, in his critical edition of the De Animā, thinks that he discerns a Platonising spirit in the editors or copyists of the treatise, and that this has caused the introduction of a spurious negative in the passage above quoted (see page 297 note), ἀλλ’ οὐχ οὔτε μὲν νοεῖ, οὔτε δ’ οὔ νοεῖ. Such a spirit seems to show itself in the dictum cited by Spengel. Taking Aristotle as we find him, he ‘pronounces’ nothing as to the immortality of the soul. In his lost dialogue entitled Eudemus, said to have been written when he was about 30 years of age, he appears to have discoursed on the subject. Eudemus of Cyprus, an early friend of Aristotle, (and not to be confounded with his scholar and posthumous editor, Eudemus of Rhodes,) being sick at Phœra, received in a vision three prophecies, (1) that he should recover, (2) that Alexander the tyrant of Phœra would shortly die, (3) that in five years he would be restored to his home. The two first prophecies having been at once fulfilled, Eudemus and his friends looked out for some chance which should restore him to Cyprus, whence he had been exiled; but at the end of the appointed five years he fell in

66 Ὅτι Πλάτων, φησι, καὶ Ἀριστοτέλης ἢδάντον δριμῶς λέγουσι τὴν ψυχήν, καὶ τιες εἰς τὸν Ἀριστοτέλους νοεών σεμβαίνεις διηθῆν τομίζοντων αὐτὴν λέγειν.

68 See Bernays, Die Dialoge des Aristoteles (Berlin, 1863), pp. 21, 143.
battle, and thus in another sense was 'restored to his home.' This story was made the subject of the dialogue in question, of which the fragments seem to show that it argued the independence of the doctrine of immortality from Plato's theory of Ideas. From so early a production, if indeed we could be certain of its genuineness, we can conclude nothing, except that when it was written Aristotle could not have 'pronounced the soul to be mortal.' When we turn to the *Ethics* we find him unwilling (1. xi. 1) even to affirm that the dead cannot be affected and made more or less happy by the fortunes of their descendants and friends upon earth, because 'this would seem a heartless doctrine and opposed to general belief' (λαν ἄφιλον φαίνεται καὶ τὰς δόξας ἐναντίον). Aristotle thus shows great tenderness in dealing, or affecting to deal, with an important question. But in the end, having allowed, as a concession to popular feeling, that the dead may be affected by the fortunes of the living, he argues that this effect on them must be almost unappreciable, and he reminds us, in conclusion, of the extreme doubtfulness as to whether the dead do share at all in the interests of the world. In this discussion one phrase occurs in which the real feeling of Aristotle, for the moment at least, seems to be let out. He asks (*Eth. 1. x. 2*), 'Can Solon have meant that a man is happy when he has died?' and replies, 'This would be an absurdity, especially since we consider happiness to be an ἐνέργεια.' However we translate ἐνέργεια, whether as the exercise of the powers, the consciousness of life, or however else (see Essay IV.), it is clear that we have here a brief indication that death destroys those potentialities that result in happiness. It would seem then that the only immortality which is left possible by this belief is a Buddhist nirvāṇa.

---

68 *Eth. 1. xi. 4.* See notes on this passage.
Aristotle, however, in his *Ethics* was not entering on such a question. It may be that, like many other men who have lived and died, he did not see his way to a clear opinion on the subject. He did not, like Plato, base a belief upon grounds of faith. Nothing that he says about man’s moral nature seems to have any connection with the idea of a future life. His doctrine of the End-in-itself seems indeed rather to supersede such an idea; it does not contradict it, but rather absorbs all consideration of time and space, of present and future, in itself, as being the absolutely sufficient for men’s thoughts.
ESSAY VI.

The Ancient Stoics.

Down to the time of Aristotle, Greek philosophy may be said to have lived apart. It contained within itself a gradual progress and culmination of thought, but the great philosophers who were the authors of this progress moved on a level far above the ordinary modes of comprehension. After the death of Aristotle, a new spectacle is presented,—philosophy no longer an exclusive and esoteric property of the schools, but spreading its results over the world.

The immediate cause which brought about this change—which turned philosophy into a universal leaven, leavening, under one form or another, the thoughts of all cultivated men—must be sought for in the changed position of Ethics in relation to the other parts of philosophy. In spite of the exclusive attention of Socrates to ethical investigations, in spite of the exclusive effort of the Cynics and Cyrenaics to promulgate respectively a conception of practical life for the individual, in spite of the moral earnestness of Plato and the brilliant contributions to anthropology, in the way of accumulation, analysis, and classification of data, made by Aristotle,—Ethics had hitherto continued to occupy a really subordinate position in the mind of Greece. With Socrates the paramount interest had been the attainment of universal
conceptions; with him Ethics were rather the field for scientific experiments in method, than an ultimate end to which all else was to be subordinated. The 'one-sided Socraticists' had been regarded as merely exceptional and paradoxical non-conformists to the ordinary mode of life. In the mind of Plato Ethics blended themselves with aspirations after a perfectly ordered State, and to him 'the contemplation of all time and all existence' under the light of idealism was as dear as was the education of the individual soul. Aristotle, in the process of reconstructing all the departments of thought and knowledge, took Ethics, so to speak, in his stride. He allotted to man, as a practical being, an important position in the scale of the universe, but still he said that the good attainable in a life of moral virtue was 'secondary' to that attainable in a life of philosophy (Eth. x. viii. 1); that 'the end-in-itself for a State was more beautiful and divine that that for an individual' (i. ii. 8); and (as Eudemos expressed it, Eth. vi. vii. 4), that 'there are in the universe many things diviner than man.' Such sayings imply that Ethics are inferior in practical interest to Politics, and in intellectual interest to the speculative branches of philosophy. But after Aristotle, the order which he had given to the hierarchy of the sciences became subverted. All considerations of the State now dropped out of sight, as of a subject no longer capable of being entertained; Ethics came to the fore-front, as if the practical interests of the individual were of paramount and absorbing importance; and all other departments of enquiry, whether logical, metaphysical, or physical, were cultivated only as subsidiary to the one great object of obtaining a theory for the regulation of individual life.

These features were equally characteristic of the two great post-Aristotelian schools, the Stoic and the Epicurean.
To account for them it does not seem quite sufficient to refer, with Zeller, to the political condition of Greece. The loss of independence in the Greek States might reasonably account for the abandonment of Politics as a science; but the times do not seem to have been dangerous and oppressive, such as would force the mind by fears and interruptions away from philosophical enquiry. Political freedom does not appear to be an absolute necessity for freedom of speculation, for in Germany the greatest achievements in philosophy were made at a time when the liberties of the people were most scanty. And in Athens during the third century B.C., there was a vast amount of active philosophising on almost all the great subjects, though these now received a peculiar turn in their mode of treatment. And Plutarch speaks of the early Stoics, Zeno, Cleantnes, and Chrysippus, as living at Athens as though they had eaten of the lotus, spell-bound on a foreign soil, enamoured of leisure, and spending their long lives in books, and walks, and discourses. Athens was still a genial home for philosophy 'native To famous wits, or hospitable, in her sweet recess.' And other causes, besides political circumstances, must be sought for the peculiar character of the philosophical schools that now arose within her walls. That they exhibited a decline in force of thought, is indubitable: but in this world it appears as if a succession of great geniuses can never be long maintained. In Germany the great idealistic systems of philosophy were succeeded by a strong reaction in the direction of materialism. And in Greece the same phenomenon presented itself after the death of Aristotle. Zeno and Epicurus displayed an equal aversion to that idealism which characterises the

---

2 De Repugnantibus Stoicis, c. 2.
thought of Aristotle no less than Plato; each denied the existence of anything immaterial; and each reverted to the physical system of a pre-Socratic philosopher as a more reasonable explanation of the world than that which Plato or Aristotle had given. Zeno thus espoused the physics of Heraclitus, and Epicurus those of Democritus. Besides this reaction towards pre-Socratic materialism, there was another reaction in which both these philosophers shared, namely, towards the pre-Aristotelian individualism of the Cynics and Cyrenaics. The character of the times certainly favoured the rehabilitation and development of this principle; the scope for public life and action was gone, and thus individuality supplanted the idea of citizenship. To find out the way of happiness for the individual soul, became now, not one problem among many, but the one great problem for philosophy, to which all others were to be secondary and subordinate. Thus a new era of thought commenced with Zeno and Epicurus, in which Ethics was elevated to the first place and became the architectonic science. And the causes for this, so far as we have reviewed them, were common to both Zeno and Epicurus, consisting in a decline of personal ability and philosophic power, in an inability to keep up to the level of the speculative and idealistic systems, and also in the circumstances of the times, which encouraged a monkish exclusiveness of attention to the subjective and practical well-being of the individual soul.

But there was another special cause which contributed greatly to give its peculiar character to the Stoical school, and which is the source of much of the interest that attaches to the history of that school. In a former edition of this Essay it was suggested that the striking features and attitude exhibited by the Stoical doctrine were attributable to the Race from which its founders sprang. This idea has
subsequently been accepted and worked out, and may be now considered to have been established. If we cast our eyes on a list of the early Stoics and their native places, we cannot avoid noticing how universally the leaders of this school came from the East to Athens, how many of them came from Semitic towns or colonies. Zeno was from Citium, a Phoenician colony in Cyprus, and himself belonged to the Semitic race, as is testified by the *soubriquet* of *the Phoenician* commonly applied to him. Of his disciples, Perseus came also from Citium; Herillus was from Carthage; Athenodorus from Tarsus; Cleanthes from Assus in the Troad. The chief disciples of Cleanthes were Spharus of the Bosporus, and Chrysippus from Soli in Cilicia. Chrysippus was succeeded by Zeno of Sidon, and Diogenes of Babylon; the latter taught Antipater of Tarsus, who taught Panætius of Rhodes, who taught Posidonius of Apamea in Syria. There was another Athenodorus, from Cana in Cilicia; and the early Stoic Archedemus is mentioned by Cicero as belonging to Tarsus. The names of Nestor, Athenodorus, Cordylious, and Heraclides, may be added to the list of Stoical teachers furnished by Tarsus. Seleucia sent forth Diogenes; Epiphania Euphrates; Scythopolis Basilides; Ascalon Antibius; Tyre Antipater; Sidon Boethus; Ptolemais Diogenes. We see then what an Oriental aspect this catalogue presents. Not a single Stoic of note was a native of Greece proper. From Tyre and Sidon, and Ptolemais and Ascalon and Apamea, from Babylon and Carthage, the future doctors
of the Stoic furore flocking to Athens ("in Illisum de-
fluxit Orontes"). No country more Greek than Rhodes or
Phrygia, is the home of any. On the whole, Cilicia and the
Semitic colony in Cyprus are the chief head-quarters whence
the leaders of this sect were derived.

These facts give us an insight into the fundamental and
essential character of Stoicism. Its essence consists in the
introduction of the Semitic temperament and a Semitic
spirit into Greek philosophy.

The meeting of Eastern and Western ideas had been pre-
pared by the conquests of Alexander, and the production of
Stoicism was one of its first fruits. We moderns have all
been imbued with the Semitic spirit in its highest manifesta-
tions by the pages of Holy Writ. Other manifestations of
that spirit, as for instance the Mahomedan religion, exhibit
it as an intense, but narrow, earnestness, averse on the
whole to science and art, but tending to enthusiasm and
even fanaticism for abstract ideas of religion or morality.
The Semitic spirit found a new and favourable field for its
development in Athens at the close of the fourth century
B.C. If philosophy in general was then tending from other
causes to the exaltation of Ethics over Metaphysics, this
tendency just suited the Semitic moral earnestness. Ethics
were taken up by the Phoenician Zeno, and came out from
his hands with a new aspect. A phase of thought now
appears for the first time on Hellenic soil, in which the moral
consciousness of the individual—the moral ego—is made
the centre and starting-point. Such a point of view, with
various concomitant ideas, such as duty and responsibility,
and self-examination, and the sense of short-coming, and
moral self-cultivation, is familiar to us in the Psalms of
David and afterwards in the writings of St. Paul, but it was
not to be found in the conversations of Socrates, nor in the
dialogues of Plato, nor in the *Ethics* of Aristotle. It was alien indeed from the childlike and unconscious spirit of the Hellenic mind, with its tendency to objective thought and the enjoyment of nature. Our own views in modern times have been so much tinged with Hebraism, that the highest degree of moral consciousness seems only natural to us, and thus Stoicism, which introduced this state of feeling to the ancient Hellenic world, may be said to have formed a transition step between Greek philosophy and the modern ethical point of view. So it is that in many modern books of morals, and even in many practical sermons, we come upon much that has a close affinity with the modes of thinking of the ancient Stoics, while with the modes of thinking of Plato and Aristotle such productions have rarely any affinity at all. And this is the secret of the interest that Stoicism has for modern times.

Epicurus, the son of Athenian parents, handled the problem of his epoch—that of the well-being of the individual soul—in a sense widely different from that of Zeno. Much as the two schools, Stoicism and Epicurism, had originally in common, they each followed out their fundamental tendencies so as to diverge ultimately into the sharpest contrast and to stand in the sharpest antithesis to each other. If we ask on what does this antithesis rest? we shall find that it rests on the twofold essence of man, as a thinking and as a feeling subject; as consisting, on the one hand, of spirit, or free and self-determined thought; and, on the other hand, of nature, or an existence determined by physical laws expressing themselves in the sensuous feelings and desires. These two sides of man's being may often stand in opposition to each other; or again, they may be harmonised so as to give either the one side or the other the precedence and authority. Either we may say 'a thing is good because it
is pleasant,' and thus refer the decision to the natural feelings; or we may say 'it is pleasant because it is good,' and thus refer the decision to the inner spirit or reason. How far these two sentences actually express the leading principles of the Stoic and the Epicurean schools, we may best see by considering the ideal of man which they each proposed to themselves. The Epicurean ideal was a being moving harmoniously according to natural impulses; one, in short, in whom the spirit and thought should rather form a part of the natural life than prominently control it. The Stoic ideal, on the contrary, was a being in whom the natural impulses and desires should be absolutely subjected to the laws of abstract thought. Epicurism is essentially Greek and essentially Pagan; the beautiful and genial Greek mythology is but a deification of the natural powers and impulses. Stoicism is a reaction against this; it consists in an inner life, in a drawing away from the body, and in disregarding as worthless and of no moment the 'law in the members.' Epicurism and Stoicism both received as an inheritance the results of Grecian speculation, but in both, the moral attitude was what was essential. Of both it has been truly said that they were less and more than philosophy. Less, because they were thoroughly unspeculative in their character, and indeed consisted in the popularising of speculation; more, because they were not mere systems of knowledge, but a principle for the whole of life. They soon lost their local and restricted character as schools; they assimilated to themselves more and more broadly human thought, and became 'the two great confessions of faith of the historical world.'

Thus were these two ideas set against each other. Regarding, however, Stoicism, with its weak-

---

8 Dr. Graafl, *Uebersicht der Entwicklungsgang der Philosophie* (Breslau, 1842), p. 218, whence several points of this comparison are taken.
ness and its strength, as far the more interesting and important, as it is, of course, also far the higher tendency of the two, we shall henceforth, in tracing its history, only incidentally allude to the fortunes of its rival.  

In the history of Stoicism, the following parts of the subject seem naturally to stand apart from each other, and to demand in some sort a separate treatment:—First, the period of the formation of the Stoical dogma in Athens, from Zeno to Chrysippus; second, the period of the promulgation of Stoicism and its introduction to the knowledge of other civilised nations; third, Stoicism in the Roman world, its different phases, and its influence on individual thought and on public manners and institutions. I. The first period of Stoicism takes us down to the year 207 B.C., which was the date of the death of Chrysippus. The chronology of the commencement of this period is difficult to fix. Zeno probably lived till after the year 260 B.C., and he may have been born rather before 340 B.C. It is uncertain whether he came to Athens in his twenty-second or his thirtieth year. On the whole, we may assume that he did not arrive there till after the death of Aristotle, which took place in the year 322 B.C. Chrysippus may possibly in early youth have heard some of the discourses of Zeno; but Cleanthes, who succeeded Zeno as leader of the Porch, was the true link between them. By these three the Stoical doctrine, properly so called, received its completion. Nothing was afterwards added to it, except

*Among the posthumous papers published in the Appendix to Grote’s *Aristotle*, we find (pp. 434-443) a short and lucid account of ‘Epikurus.’ Grote’s editors tell us that he aimed ‘at setting in its true light a much-maligned system of thought.’ The same generous spirit which made him the apologist of the Sophists induced him to become the vindicator of Epicurus. But he does not exactly tell us whether he considers the system of Epicurus to be one that it would be desirable for the majority of men to follow. This paper and Grote’s fragment on the Stoics are worth consulting; but all detail of accurate information in these schools must be sought in Zeller’s account of them, referred to in note 1.*
the eclectic amalgamation of other doctrines. These three personages come before us with great distinctness. The anecdotes that have been handed down about them, though perhaps in some cases mythical, are at all events highly symbolical, and give us a very definite conception of their separate characteristics. Zeno is described as a slight, withered little fellow, of a swarthy complexion, and with his neck on one side. The story goes, that in trading to Athens he was shipwrecked at the Piræus, and was thus 'cast on to the shores of philosophy.' Going up to the city, he sat down at the stall of a bookseller, where he read the second book of the Memorabilia of Xenophon, and asked with enthusiasm 'where such men lived?' Crates, the Cynic, happened to be passing at the moment, and the bookseller cried 'Follow him.' Zeno then studied under Crates, but held himself aloof from the extravagant unseemliness of Cynicism. He is also said to have studied under the Megarians, Stilpo, Cronus, and Philo, and under the Academicians, Xenocrates and Polemo. After twenty years, he opened his school in the Stoa Poicile, the porch adorned with the frescoes of Polygnotus. Zeno appears to have impressed the Athenians with the highest admiration for his character. Their treatment of him was a contrast to their treatment of Socrates. It is perhaps an apocryphal tradition which relates that they deposited the keys of their citadel with him, as being the most trustworthy person; but it may be true that they decreed to him a golden crown, a brazen statue, and a public entombment. In extreme old age he committed suicide. Cleanthes, the disciple of Zeno, was perhaps the most zealous disciple that a philosopher ever had. He is said to have been originally a boxer, and to have come to Athens with four drachmas in his possession.

7 Diog. Laert. vii. i. 1.
By his strength, his endurance, and his laborious life, he acquired the name of ‘the New Hercules.’ ‘Falling in with Zeno,’ it is said, ‘he took the philosophy most bravely.’ He wrote notes of his master’s lectures on potsherds and the bladebones of oxen, not being able to afford to purchase paper. He was summoned before the Areopagus to give an account of his way of living, since his whole days were passed in philosophy, and he had no ostensible calling nor means of support. He proved to his judges that he drew water by night for a gardener, and ground the corn for a flour-dealer, and thus earned a maintenance. The story goes on that his judges, on hearing this account, voted him ten minae, which the rigid Zeno forbade him to accept. There is something quaint about the whole personality of Cleanthes. He was nicknamed ‘the Ass,’ for his stubborn patience. He seems to have left the impression that it was this indomitable perseverance, rather than the superiority of his genius, that gave him precedence over other noteworthy disciples of Zeno. ‘High thinking,’ however, appears to have accompanied the ‘plain living’ of Cleanthes. His reflections on Destiny, and his *Hymn to Jupiter*, will best be treated of hereafter. When asked, ‘What is the best way to be rich?’ he answered, ‘To be poor in desires.’ No reproaches or ridicule ever ruffled the sweetness and dignity of his presence. His calm bearing, when satirized on the stage by the comic poet Sositheus, caused the spectators to applaud him and to hiss off Sositheus. The idea of death seems to have been long present to his mind. Being taunted with his old age, he said, ‘Yes, I am willing to be gone, but when I see myself sound in every part, writing and reading, I am again tempted to linger.’ The story of his

arguing with trenchant dialectic against Epicurus and the Academy. We shall see that he really mooted and boldly strove to reconcile some of the deepest and most difficult contradictions of human thought—difficulties which are ever present in modern metaphysics, but which had never truly occupied the ancients before the death of Aristotle. We know most about Chrysippus from Plutarch's book *On the Inconsistencies of the Stoics*. It consists really of the inconsistencies of Chrysippus, extracted from various parts of his voluminous writings. This interesting book gives the impression that Plutarch is unphilosophical, though we are not able to exonerate Chrysippus from inconsistency. Such rapid and extensive writing, such a warm spirit of advocacy, such an attempt to round off and complete a doctrine in spite of all difficulties, such a various controversialism, such an elevated theory, paradoxical even in the grandeur of its aims, combined, on the other hand, with an extremely practical point of view,—could not fail to give rise to manifold inconsistencies. Chrysippus was inconsistent, just as Seneca afterwards was inconsistent, because it suited the genius of Stoicism to abandon the stern simplicity and unity of a scientific principle. Stoicism became learned, complex, and eclectic; embracing in its grasp a far greater variety of problems than the philosophy of Plato or Aristotle had done, it treated these more loosely, and often oscillated between mere empiricism and a more philosophical point of view.

Taking now the Stoical doctrine as it gradually formed itself during the entire course of the third century B.C., we may proceed to trace its essential features, though in the lack of direct writings 11 of the successive masters of the

ulcer on the tongue, he was advised by his physician to abstain from eating for a while in order to facilitate the cure. Having fasted for two days he was completely cured, and his physician bade him return to his usual course of life, but he said that ‘Since he had got so far on the road, it would be a pity not to finish the journey;’ so continuing his abstinence, he died.

Hardly any personal details of the life of Chrysippus have come to us. On the other hand, we have more fragments of his actual writings than of those of all the early Stoics put together. In Chrysippus the man seems swallowed up in the writer and disputer. He is said\(^\text{10}\) to have been slight in person, so that his statue in the Ceramicus was totally eclipsed by a neighbouring equestrian figure, and from this circumstance Carneades nicknamed him Crysippus. His literary activity was most unrivalled: he wrote above seven hundred and five works on different subjects. Epicurus alone, of the ancient philosophers, outstripped him in voluminouness of writing. He is said to have been keen and able on every sort of subject. He told Cleanthes that he ‘only wanted the doctrines and he would soon find out the proofs.’ This boast appears to betray a want of earnestness as to the truth, and somewhat too much of the spirit of a dialectician. In this respect Chrysippus must have differed widely from his two distinguished predecessors, with whom Stoicism was above all things a reality and a mode of life. However, there is no doubt that Chrysippus did great service to the Stoic school by embodying their doctrines and stating them in manifold different ways. Hence the saying, ‘But for Chrysippus, the Porch would never have been.’ He developed Stoicism on its negative and antagonistic side by

\(^{10}\) Diog. Laert. vii. vii. 4.
arguing with trenchant dialectic against Epicurus and the Academy. Stoicism became learned, complex, and eclectic; embracing in its grasp a far greater variety of problems than the philosophy of Plato or Aristotle had done, it treated these more loosely, and often oscillated between mere empiricism and a more philosophical point of view.

Taking now the Stoical doctrine as it gradually formed itself during the entire course of the third century B.C., we may proceed to trace its essential features, though in the lack of direct writings \(^{11}\) of the successive masters of the

\(^{11}\) No fragment even, of any length, belonging to the early Stoics, has come down to us, except the hymn of Cleanthus. Our main sources of information with regard to them are Cicero, Plutarch, Sextus Empiricus, Diogenes.
school we must give up attempting to fix their several contributions, and their differences from each other. Early Stoicism consisted of two elements—the one might be called dynamical: it was the peculiar spirit, tendency, and mental attitude assumed; the other element was material, being an adaptation of the results of existing philosophy. The material side of Stoicism was comparatively unimportant. This it was, however, which caused Cicero \(^{12}\) to make the mistaken observation that Zeno was no real innovator, but only a reproducer of the Peripatetic doctrines. And indeed it is sufficiently striking at first sight of the Stoical compendia, that their ethic seems a patchwork of Peripatetic and Platonic formulæ; their logic, a development of the doctrine of the syllogism; and their physic, a blending of Heraclitus with Aristotle. Yet, in spite of all this, Zeno was no mere eclectic; all that was Peripatetic in his system was the outward, and not the inner and essential part. And in short, the vestiges of previous Greek philosophy existing in Stoical books may be said, *mutatis mutandis*, to bear the same relation to Stoicism as the vestiges of Jewish and of Alexandrian ideas existing in the New Testament bear to Christianity. What we have called the dynamical element of Stoicism constitutes its real essence. This it derived partly from the idiosyncrasy and perhaps the national characteristics of its founder, partly from the peculiarities of the Cynical school in which it was nurtured.

Zeno agreed with Crates, and Stoicism coincides with the Cynic view thus far, that it makes the starting-point of all thought to be the conception of a life. The setting of this

Laertius, and Stobæus. We have the reflection of their doctrine in the writings of the Roman Stoics, Seneca, Epictetus, and Marcus Aurelius; and numberless scattered allusions to them in the later literature of antiquity may be easily combined into a complete and tolerably certain view.

\(^{12}\) *De Fin.* iv. ii. 3, iv. xxvi. 72.
moral and practical conception above all speculative philosophy separates Zeno from the previous schools of Greece. We have now to ask, What is it that distinguishes him from Crates?—what is the essential difference between the Stoic and the Cynic creeds? This is generally stated as if the former were merely a softened edition of the latter. The Cynic said, 'There is nothing good but virtue; all else is absolutely indifferent.' The Stoic said, 'Yes, but among indifferent things some are preferable\(^{13}\) to others; health, though not an absolute good, is, on the whole, preferable to sickness; and this, though not an evil, is, on the whole, to be avoided.' Again, it is said that Cynicism is unseemly and brutal, and tramples upon society; Stoicism is more gentle, and outwardly conforms with the world. But this comparison does not go sufficiently deep, and does not explain the facts of the case, for the Stoics were often as paradoxical as the Cynics in denying that anything was a good besides virtue; and if they were outwardly less ferocious, we want to know what was the inward law of their doctrine that made them so. Perhaps we nearest touch the spring of difference, by observing that Cynicism is essentially mere negation, mere protest against the external world; while Stoicism is essentially positive, essentially constructive, and tends in many ways to leaven the external world. Cynicism despised the sciences, disdained politics, exploded the social institutions, and ridiculed patriotism or the distinctions of country. Zeno, on the contrary, re-arranged the sciences according to his views: he enjoined the wise to mix in affairs; and he conceived not a mere negation of patriotic prejudices, but

\(^{13}\) This was the famous Stoical distinction between things προηγήματα and ἀπροηγήματα; see Diog. Laert. vii. i. 67. It was a compromise between the paradox that 'nothing is good but virtue,' and the practical facts of life. Stoicism is forced to be full of such compromises.
of the Stoic furore flocking to Athens ("in Illsum defluxit Orontes"). No country more Greek than Rhodes or Phrygia, is the home of any. On the whole, Cilicia and the Semitic colony in Cyprus are the chief head-quarters whence the leaders of this sect were derived.

These facts give us an insight into the fundamental and essential character of Stoicism. Its essence consists in the introduction of the Semitic temperament and a Semitic spirit into Greek philosophy.

The meeting of Eastern and Western ideas had been prepared by the conquests of Alexander, and the production of Stoicism was one of its first fruits. We moderns have all been imbued with the Semitic spirit in its highest manifestations by the pages of Holy Writ. Other manifestations of that spirit, as for instance the Mahomedan religion, exhibit it as an intense, but narrow, earnestness, averse on the whole to science and art, but tending to enthusiasm and even fanaticism for abstract ideas of religion or morality. The Semitic spirit found a new and favourable field for its development in Athens at the close of the fourth century B.C. If philosophy in general was then tending from other causes to the exaltation of Ethics over Metaphysics, this tendency just suited the Semitic moral earnestness. Ethics were taken up by the Phoenician Zeno, and came out from his hands with a new aspect. A phase of thought now appears for the first time on Hellenic soil, in which the moral consciousness of the individual—the moral ego—is made the centre and starting-point. Such a point of view, with various concomitant ideas, such as duty and responsibility, and self-examination, and the sense of short-coming, and moral self-cultivation, is familiar to us in the Psalms of David and afterwards in the writings of St. Paul, but it was not to be found in the conversations of Socrates, nor in the
dialogues of Plato, nor in the *Ethics* of Aristotle. It was alien indeed from the childlike and unconscious spirit of the Hellenic mind, with its tendency to objective thought and the enjoyment of nature. Our own views in modern times have been so much tinged with Hebraism, that the highest degree of moral consciousness seems only natural to us, and thus Stoicism, which introduced this state of feeling to the ancient Hellenic world, may be said to have formed a transition step between Greek philosophy and the modern ethical point of view. So it is that in many modern books of morals, and even in many practical sermons, we come upon much that has a close affinity with the modes of thinking of the ancient Stoics, while with the modes of thinking of Plato and Aristotle such productions have rarely any affinity at all. And this is the secret of the interest that Stoicism has for modern times.

Epicurus, the son of Athenian parents, handled the problem of his epoch—that of the well-being of the individual soul—in a sense widely different from that of Zeno. Much as the two schools, Stoicism and Epicurism, had originally in common, they each followed out their fundamental tendencies so as to diverge ultimately into the sharpest contrast and to stand in the sharpest antithesis to each other. If we ask on what does this antithesis rest? we shall find that it rests on the twofold essence of man, as a thinking and as a feeling subject; as consisting, on the one hand, of spirit, or free and self-determined thought; and, on the other hand, of nature, or an existence determined by physical laws expressing themselves in the sensuous feelings and desires. These two sides of man’s being may often stand in opposition to each other; or again, they may be harmonised so as to give either the one side or the other the precedence and authority. Either we may say ‘a thing is good because it

It was alien indeed from the childlike and unconscious spirit of the Hellenic mind, with its tendency to objective thought and the enjoyment of nature. Our own views in modern times have been so much tinged with Hebraism, that the highest degree of moral consciousness seems only natural to us, and thus Stoicism, which introduced this state of feeling to the ancient Hellenic world, may be said to have formed a transition step between Greek philosophy and the modern ethical point of view. So it is that in many modern books of morals, and even in many practical sermons, we come upon much that has a close affinity with the modes of thinking of the ancient Stoics, while with the modes of thinking of Plato and Aristotle such productions have rarely any affinity at all. And this is the secret of the interest that Stoicism has for modern times.

Epicurus, the son of Athenian parents, handled the problem of his epoch—that of the well-being of the individual soul—in a sense widely different from that of Zeno. Much as the two schools, Stoicism and Epicurism, had originally in common, they each followed out their fundamental tendencies so as to diverge ultimately into the sharpest contrast and to stand in the sharpest antithesis to each other. If we ask on what does this antithesis rest? we shall find that it rests on the twofold essence of man, as a thinking and as a feeling subject; as consisting, on the one hand, of spirit, or free and self-determined thought; and, on the other hand, of nature, or an existence determined by physical laws expressing themselves in the sensuous feelings and desires. These two sides of man’s being may often stand in opposition to each other; or again, they may be harmonised so as to give either the one side or the other the precedence and authority. Either we may say ‘a thing is good because it
necessity these pictures of the inner life are paradoxical. They speak of a boundless freedom and elevation, with which the narrow limits of external reality come into harsh contrast. And in the vaunts of the Stoics we only see what is analogous to one side of Lord Bacon's famous 'character of a believing Christian, drawn out in paradoxes and seeming contradictions.' 'He is rich in poverty, and poor in the midst of riches; he believes himself to be a king, how mean soever he be; and how great soever he be, yet he thinks himself not too good to be servant to the poorest saint.'

Some of the qualities of the Stoic ideal seem inferior to the conception of goodness afterwards developed by the school. The Wise Man of Zeno was represented as stern and pitiless, and as never conceding pardon to any one. This forms a great contrast with the gentle and forgiving spirit of Epictetus and Marcus Aurelius. Such harsher traits of the picture are Semitic in tone; they were afterwards discarded during subsequent transmutations of the Stoical principle. More inward meaning is there in the saying, paradoxical as it might appear, that nothing the Wise Man can do would be a crime. Cannibalism, and incest, and the most shocking things, are said to be indifferent to the sage. This however, though stated so repulsively, can only have meant something resembling the principle that 'whatever is of faith is no sin.' One of the interests of the Stoical ideal consists in the parallel it affords at many points to different phases of religious feeling. Such for instance is the tendency, more or less vaguely connecting itself with the Stoic doctrine, to divide all the world into the good and the bad, or, as they expressed it, into the wise and the fools—an idea evidently belonging to the inner life, and hard to bring into conformity with external facts. Entirely in the same direction, the Stoics said that short of virtue—in other words,
short of the standard of perfection—all faults and vices were equal. Chrysippus, indeed, tried to soften down this assertion; but in its extreme form it only reminds us of certain sayings which have been heard in modern times, about the ‘worthlessness of morality.’ In the presence of a dazzling ideal of spiritual perfection, the minor distinctions of right and wrong seem to lose their meaning.

The Stoics, after portraying their Wise Man, were free to confess that such a character did not exist, and indeed never had existed. With small logical consistency, but with much human truth, while they allowed their assertions about the worthlessness of all except absolute wisdom to remain, and always held up this unattained and unattainable ideal, they admitted another conception to stand, though unacknowledged, beside it—namely, the conception of ‘advance.’\(^9\) Zeno and the rest, though they do not claim to be wise, yet claimed to be ‘advancing.’ This notion of conscious moral progress and self-discipline is too familiar now for us easily to believe that it was first introduced into Greece in the third century B.C. It may be said, indeed, to be contained implicitly in Aristotle’s theory of ‘habits;’ but it is in reality the expression of a new and totally different spirit. By this spirit we shall find the later Stoics deeply penetrated. It constituted perhaps the most purely ‘moral’ notion of antiquity, as implying the deepest associations which are attached to the word ‘moral.’

Another great idea, of which the introduction is generally attributed to the Stoics, is the idea of ‘duty;’ but on consideration, we shall perceive that this, entirely conformable as it was with their point of view, was not all at once enunciated by them, but was only gradually developed in or by

\(^9\) πρόκοπθ, πρόκοπτερ (Diog. Laert. vii. 1. 54). In Latin, progressus, pro-

ficere (Seneca, Ep. 71).
means of their philosophy. There were two correlative terms introduced by the early Stoics, signifying the 'suitable' and the 'right.' The 'right' could only be said of actions having perfect moral worth. The 'suitable' included all that fitted in harmoniously with the course of life—everything that could on good grounds be recommended or defended. This term, the 'suitable,' seems to fall short of the moral significance of what we mean by duty; and yet it is remarkable that this term became translated into Latin as officium, and thus really stands to our word 'duty' in the position of lineal antecedent. So much casuistical discussion took place upon what was, or was not, 'suitable,' that a train of associations became attached to the word, associations which were inherited by the Romans. Thus the idea of duty grew up, more belonging, perhaps, to the Roman than to the Greek elements in the Stoical spirit, fostered by a national sternness and a love of law, and ultimately borrowing its modes of expression from the formulæ of Roman jurisprudence.22

The most prominent conception in the Stoical system being the effort to attain a perfect life in conformity with universal laws, we may now ask what forms the background to this picture? Aristotle and Plato would certainly have conceived to themselves a limited state, essentially Greek in character, the institutions of which should furnish sufficiently favourable conditions for the life of the Wise Man. But in the third century B.C. these restricted notions had become

---

21 καθήκον and καθήκωμα, Stob. Ed. ii. 158. Cicero's De Officiis is taken, with but little alteration and addition, from the work of Panetius, περὶ τῶν καθήκων. Cicero complains that Panetius gave no definition of his subject (De Off. i. ii. 7). Thus we see that the Greek Stoics had really no formula to express what we mean by duty.

22 For instance, the word 'obligation' is a Latin law term. The word 'law' itself is employed with a moral meaning, and on consideration it will be found that our notions of duty ('what is owing') are intertwined intricably with legal associations.
exploded. Zeno now imagined, what surpassed the Republic of Plato, a universal state, with one government and manner of life for all mankind. This admired polity,\(^23\) which Plutarch calls 'a dream of philosophic statesmanship,' and which, he rhetorically says, was realised by Alexander the Great, owed, no doubt, its origin to the influence upon men's minds produced by the conquests of Alexander. This influence, partly depressing,—in so far as it diminished the sense of freedom, and robbed men of their healthy, keen, and personal interest in politics,—was also partly stimulating, since it unfolded a wider horizon, and the possibility of conceiving a universal state. Thus were the national and exclusive ideas of Greece, as afterwards of Rome, changed into cosmopolitanism. The first lesson of cosmopolitanism, that said, 'there is no difference between Greece and barbarians—the world is our city,' must have seemed a mighty revelation. To say this was quite natural to Stoicism, which drawing the mind away from surrounding objects, bids it soar into the abstract and the universal. By denying the reality and the interest of national politics, the moral importance of the individual was immensely enhanced. Ethics were freed from all connection with external institutions, and were joined in a new and close alliance to physics and theology.

The cosmopolitanism of the Stoics was a cosmopolitanism in the widest etymological sense, for they regarded not the inhabited earth alone, but the whole universe, as man's city. Undistracted by political ideas, they placed the individual in direct relation to the laws of the Cosmos. Hence Chrysippus said,\(^24\) that 'no ethical subject could be rightly approached except from the preconsideration of entire nature and the ordering of the whole.' Hence his regular preamble to every

\(^{23}\) Plot. \(\text{scanderi Magni}\)  
discussion of good, evil, ends, justice, marriage, education, and the like, was some exordium about Fate or Providence. So close and absolute a dependence of the individual upon the Divine First Cause was asserted by the Stoics, that their theological system reminds us, to some extent, of modern Calvinism, or of the doctrines of Spinoza. Body, they said, is the only substance. Nothing incorporeal could act upon what is corporeal, or vice versa. The First Cause of all is God, or Zeus—the universal reason, the world-spirit, which may also be represented as the primeval fire, just as the soul of man, which is an emanation from it, consists of a warm ether. God, by transformation of his own essence, makes the world. All things come forth from the bosom of God, and into it all things will again return, when by universal conflagration the world sinks into the divine fire, and God is again left alone. The universe is a living and rational whole; for how else could the human soul, which is but a part of that whole, be rational and conscious? If the Cosmos be compared to an individual man, then Providence is like the spirit of a man. Thus all things are very good, being ordered and preordained by the divine reason. This reason is also destiny, which is defined to be26 'the law according to which what has been, has been; what is, is; and what shall be, shall be.' The round world hangs balanced in an infinite vacuum. It is made up of four elements—fire and air, which are active powers; water and earth, which are passive materials. Within it are four classes of natural objects—inorganic substances, plants, animals, and rational beings. First and highest among rational beings are the sun and the stars and

25 For the particulars of their physical and theological system, and the authorities which establish the various parts of the doctrine, see Zeller's account.

26 Plutarch, De Natura Deorum, i. 28.
all the heavenly bodies, which, as Plato and Aristotle used to say, are conscious, reasonable, and blessed existences. These, indeed, are created gods, divine but not eternal. They will at last, like all things else, return into the unity of the primeval fire. Other gods, or rather other manifestations of the one divine principle, exist in the elements and the powers of nature, which, accordingly, are rightly worshipped by the people, and have received names expressive of their different attributes. Heroes, also, with divine qualities, are justly deified; and the Wise Man is divine, since he bears a god within himself. In this city of Zeus, where all is holy, and earth and sky are full of gods, the individual man is but a part of the whole—only one expression of the universal law.

Abstractedly, the theology of the Stoics appears as a materialistic pantheism; God is represented as a fire, and the world as a mode of God. But, practically, this aspect of the creed is softened by two feelings—by their strong sense, first, of the personality of God; and secondly, of the individuality of man. These feelings express themselves in the hymn of Cleanthes, the most devotional fragment of Grecian antiquity. In this hymn, Zeus is addressed as highest of the gods, having many names, always omnipotent, leader of nature, and governing all things by law.

"Thee," continues the poet, "it is lawful for all mortals to address. For we are thy offspring, and alone of living creatures possess a voice which is the image of reason. Therefore, I will for ever sing thee and celebrate thy power. All this universe rolling round the earth obeys thee, and follows willingly at thy command. Such a minister hast thou in thy invincible hands, the two-edged, flaming, vivid, thun-

derbolt. O King, most high, nothing is done without thee either in heaven or on earth, or in the sea, except what the wicked do in their foolishness. Thou makest order out of disorder, and what is worthless becomes precious in thy sight; for thou has fitted together good and evil into one, and hast established one law that exists for ever. But the wicked fly from thy law, unhappy ones, and though they desire to possess what is good, yet they see not, neither do they hear, the universal law of God. If they would follow it with understanding, they might have a good life. But they go astray, each after his own devices—some vainly striving after reputation, others turning aside after gain excessively, others after riotous living and wantonness. Nay, but, O Zeus, giver of all things, who dwellest in dark clouds, and rulest over the thunder, deliver men from their foolishness. Scatter it from their souls, and grant them to obtain wisdom, for by wisdom thou dost rightly govern all things; that being honoured we may repay thee with honour, singing thy works without ceasing, as is right for us to do. For there is no greater thing than this, either for mortal men or for the gods, to sing rightly the universal law.

In this interesting fragment we see, above all, a belief in the unity of God. This, Plato and Aristotle had most certainly arrived at. Even in the popular ideas it probably lay behind all polytheistic forms, as being a truth necessary to the mind. But Monotheism here, as in the early Hebrew Scriptures, is co-existent with a mention of other gods besides the one highest God. These are represented as inferior to Zeus, and singing his praises. The human soul is here depicted as deriving all happiness from wisdom and a knowledge of God. The knowledge of God and a devotional regard to Him are mentioned as needs of the human
though the knowledge spoken of appears partly under the aspect of an intuition into the universal and impersonal law. When Cleanthes speaks of 'repaying God with honour,' we see a strong assertion of the worth of the individual. Heraclitus had said of old that 'Zeus looks on the wisest man as we look on an ape.' But now the feeling about these things was changed, and Chrysippus even went so far as to say, that 'the sage is not less useful to Zeus than Zeus is to the sage,'—a saying which is rendered less offensive by taking it partly in a metaphysical sense, to mean that the individual is as necessary to the universal law as vice versa.

As strong an assertion as this would seem almost required to counterbalance the absorbing necessarian element in early Stoicism. At first it excites surprise that a system putting so great store on the moral will should on the other hand appear to annihilate it. If all proceeds by destiny, what scope is left for individual action, for self-discipline and moral advance? But we must leave this contradiction unresolved. Other systems with a profoundly moral bearing have also maintained the doctrine of necessity. And it was plainly the intention of the Stoics that the Wise Man, by raising himself to the consciousness of universal necessity, should become free, while all those who had not attained to this consciousness remained in bondage. 'Lead me, Zeus, and thou Destiny,' says Cleanthes, in another fragment, 'whithersoever I am by you appointed. I will follow not reluctant; but even though I am unwilling through badness, I shall follow none the less.' Yet still with the Stoics the individual element remained equally valid; the individual

29

δε ἐφαμαι γ' ἄκουστι· ἢ δὲ μὴ θίλω

καθις γενόμαι, ὑδεὶς ἃττον ἐφαμαι.

verses are translated by Seneca.
consciousness was the starting-point of their thought; and hence the difficulty arose, as in modern times, how to reconcile the opposite ideas of individual freedom, and of a world absolutely predetermined by divine reason. To the task of this reconciliation Chrysippus devoted himself, and Cicero describes him as 'labouring painfully to explain how all things happen by Fate, and yet that there is something in ourselves.'

To effect this, he drew a distinction between 'predisposing' and 'determinant' causes, and said that only the 'predisposing' causes rested with Fate, while the 'determinant' cause was always in the human will. This distinction will hardly bear much scrutiny. When Chrysippus was confronted with what philosophers called the 'lazy argument,' namely, the very simple question, Why should I do anything, if all is fated? Why, for instance, should I send for the doctor, since, whether I do or not, the question of my recovery is already fixed by fate? — to this he replied, It is perhaps as much fated that you should send for the doctor, as that you should get well; these things are 'confatal.' In other words, the fate of the Stoics was, of course, a rational fate, acting, not supernaturally, but by the whole chain of cause and effect. The reasonings of Chrysippus are interesting historically, as being the first attempt to meet some of the difficulties of the doctrine of human freedom; and much that he urges has been repeated in after times. We have already seen the optimism of Cleanthes expressed in his hymn. He says on the one hand, that nothing is evil in the hands of God; God fits good and evil together into one frame. On the other hand, he says that

'God does all that is done in the world, except the wickedness.' Chrysippus, touching on the existence of evil and the afflictions which happen to good men, says that the existence of evil is necessary, as being the contrary to good; without it, good could not exist. Again, that as in a large family a little waste must occur, so in the world there must be parts overlooked and neglected. Again, that the good are afflicted not as a punishment, but 'according to another dispensation.' Again, that evil demons may preside over some parts of the world. Of these inconsistent arguments the first is, perhaps, the most philosophical. It is taken from Heraclitus, according to whom all things exist by the unity of contradiction. Plutarch objects to this argument, that if good can only exist by implying evil, what will become of the good after the conflagration of the world, when Zeus is all in all? If evil is destroyed, then good will be destroyed also; an objection hard to answer from the point of view of Chrysippus.

The Stoics generally professed themselves on the side of the 'common notions.' They accepted the popular theology in an allegorising spirit, as being a slightly perverted expression of the truth. Though denying the marvellous and the supernatural, and being quite unable to attribute to God a meddling in the minutiae of human affairs, they yet declared for the reality of omens, oracles, and portents. They explained their belief by saying that there was no special revelation, but that certain signs were universally preordained to accompany certain events. The portent and the thing to be signified were 'confatal.' Thus the world was full of divine coincidences, if men could but discern them. We can well fancy that this theme would suit the subtle intellect of Chry-

---

4 Repug, Stoic. xxxv. 84 Cicero, De Divinatione, i. iii., &c.
---Seneca, Quest. Nat. ii. 52.
necessity these pictures of the inner life are paradoxical. They speak of a boundless freedom and elevation, with which the narrow limits of external reality come into harsh contrast. And in the vaunts of the Stoics we only see what is analogous to one side of Lord Bacon's famous 'character of a believing Christian, drawn out in paradoxes and seeming contradictions.' 'He is rich in poverty, and poor in the midst of riches; he believes himself to be a king, how mean soever he be; and how great soever he be, yet he thinks himself not too good to be servant to the poorest saint.'

Some of the qualities of the Stoic ideal seem inferior to the conception of goodness afterwards developed by the school. The Wise Man of Zeno was represented as stern and pitiless, and as never conceding pardon to any one. This forms a great contrast with the gentle and forgiving spirit of Epictetus and Marcus Aurelius. Such harsher traits of the picture are Semitic in tone; they were afterwards discarded during subsequent transmutations of the Stoical principle. More inward meaning is there in the saying, paradoxical as it might appear, that nothing the Wise Man can do would be a crime. Cannibalism, and incest, and the most shocking things, are said to be indifferent to the sage. This however, though stated so repulsively, can only have meant something resembling the principle that 'whatever is of faith is no sin.' One of the interests of the Stoical ideal consists in the parallel it affords at many points to different phases of religious feeling. Such for instance is the tendency, more or less vaguely connecting itself with the Stoic doctrine, to divide all the world into the good and the bad, or, as they expressed it, into the wise and the fools—an idea evidently belonging to the inner life, and hard to bring into conformity with external facts. Entirely in the same direction, the Stoics said that short of virtue—in other words,
short of the standard of perfection—all faults and vices were
equal. Chrysippus, indeed, tried to soften down this asser-
tion; but in its extreme form it only reminds us of certain
sayings which have been heard in modern times, about the
‘worthlessness of morality.’ In the presence of a dazzling
ideal of spiritual perfection, the minor distinctions of right
and wrong seem to lose their meaning.

The Stoics, after portraying their Wise Man, were free to
confess that such a character did not exist, and indeed never
had existed. With small logical consistency, but with much
human truth, while they allowed their assertions about the
worthlessness of all except absolute wisdom to remain, and
always held up this unattained and unattainable ideal, they
admitted another conception to stand, though unacknow-
ledged, beside it—namely, the conception of ‘advance.’
Zeno and the rest, though they do not claim to be wise, yet
claimed to be ‘advancing.’ This notion of conscious moral
progress and self-discipline is too familiar now for us easily
to believe that it was first introduced into Greece in the third
century B.C. It may be said, indeed, to be contained im-
plicitly in Aristotle’s theory of ‘habits;’ but it is in reality
the expression of a new and totally different spirit. By this
spirit we shall find the later Stoics deeply penetrated. It
constituted perhaps the most purely ‘moral’ notion of
antiquity, as implying the deepest associations which are
attached to the word ‘moral.’

Another great idea, of which the introduction is generally
attributed to the Stoics, is the idea of ‘duty;’ but on con-
sideration, we shall perceive that this, entirely conformable
as it was with their point of view, was not all at once enun-
ciated by them, but was only gradually developed in or by

20 προκειμένη, προκείμενον (Diog. Laert. vii. i. 54). In Latin, profectus, pro-

ficere (Seneca, Ep. 71).
school we must give up attempting to fix their several contributions, and their differences from each other. Early Stoicism consisted of two elements—the one might be called dynamical: it was the peculiar spirit, tendency, and mental attitude assumed; the other element was material, being an adaptation of the results of existing philosophy. The material side of Stoicism was comparatively unimportant. This it was, however, which caused Cicero 12 to make the mistaken observation that Zeno was no real innovator, but only a reproducer of the Peripatetic doctrines. And indeed it is sufficiently striking at first sight of the Stoical compendia, that their ethic seems a patchwork of Peripatetic and Platonic formulae; their logic, a development of the doctrine of the syllogism; and their physic, a blending of Heraclitus with Aristotle. Yet, in spite of all this, Zeno was no mere eclectic; all that was Peripatetic in his system was the outward, and not the inner and essential part. And in short, the vestiges of previous Greek philosophy existing in Stoical books may be said, mutatis mutandis, to bear the same relation to Stoicism as the vestiges of Jewish and of Alexandrian ideas existing in the New Testament bear to Christianity. What we have called the dynamical element of Stoicism constitutes its real essence. This it derived partly from the idiosyncrasy and perhaps the national characteristics of its founder, partly from the peculiarities of the Cynical school in which it was nurtured.

Zeno agreed with Crates, and Stoicism coincides with the Cynic view thus far, that it makes the starting-point of all thought to be the conception of a life. The setting of this

Laertius, and Stobæus. We have the reflection of their doctrine in the writings of the Roman Stoics, Seneca, Epictetus, and Marcus Aurelius; and numberless scattered allusions to them in the later literature of antiquity may be easily combined into a complete and tolerably certain view.

12 De Fin. iv. ii. 3. iv. xxvi. 72.
moral and practical conception above all speculative philosophy separates Zeno from the previous schools of Greece. We have now to ask, What is it that distinguishes him from Crates?—what is the essential difference between the Stoic and the Cynic creeds? This is generally stated as if the former were merely a softened edition of the latter. The Cynic said, 'There is nothing good but virtue; all else is absolutely indifferent.' The Stoic said, 'Yes, but among indifferent things some are preferable\textsuperscript{12} to others; health, though not an absolute good, is, on the whole, preferable to sickness; and this, though not an evil, is, on the whole, to be avoided.' Again, it is said that Cynicism is unseemly and brutal, and tramples upon society; Stoicism is more gentle, and outwardly conforms with the world. But this comparison does not go sufficiently deep, and does not explain the facts of the case, for the Stoics were often as paradoxical as the Cynics in denying that anything was a good besides virtue; and if they were outwardly less ferocious, we want to know what was the inward law of their doctrine that made them so. Perhaps we nearest touch the spring of difference, by observing that Cynicism is essentially mere negation, mere protest against the external world; while Stoicism is essentially positive, essentially constructive, and tends in many ways to leaven the external world. Cynicism despised the sciences, disdained politics, exploded the social institutions, and ridiculed patriotism or the distinctions of country. Zeno, on the contrary, re-arranged the sciences according to his views: he enjoined the wise to mix in affairs; and he conceived not a mere negation of patriotic prejudices, but

\textsuperscript{12} This was the famous Stoical distinction between things \textit{προμηχία} and \textit{ἀπομηχία}; see Diog. Laert. vii. i. 671. It was a compromise between the paradox that 'nothing is good but virtue,' and the practical facts of life. Stoicism is forced to be full of such compromises.
again (ῥαστῶν τοῦ ἀναστίων), which seems to be a modification of the Stoical eschatology. It is said by the author lately referred to,47 that the Chasidim, or Assideans of Maccabean times, invested their conservative Judaism to some extent with a Stoic garb,' and that the Fourth book of Maccabees exhibits to us Stoicism associated and interwoven with Judaic legalism.' It is the object of the same writer to prove that the book of Ecclesiastes, to which he assigns a date about 200 B.C., contains references to both Stoical and Epicurean tenets,48 and was written with the object of dissuading from the study of both these philosophies, which at the time 'were exerting among the theocratic people an influence adverse to the ancient faith of Judaism.' The relation of Stoicism to the Talmud is a question which, if worked out, might probably furnish some interesting results. And of the influence produced by the Stoical modes of thought and phraseology 49 upon the mind of St. Paul, his epistles furnish ample evidence.

St. Paul was born at Tarsus, a meeting point between the East and the West, the congenial soil and chief fatherland of Stoicism. Six of the eminent Stoic teachers had their home there, Chrysippus and Aratus belonged to the neighbouring Soli, and three other leaders of the sect to Mallos, which was also a Cilician town. St. Paul was

47 Mr. Tyler's Ecclesiastes, page 45.
48 Mr. Tyler finds the Stoical doctrine of 'following Nature' in the passage on 'Times and Seasons,' Eccl. iii. 1–8; the Stoical doctrine of Fate in 'Time and Chance happen unto all,' Eccl. ix. 11–12; the Stoical doctrine of Cycles in 'whatever hath been, it had been long before,' Eccl. iii. 15; the Stoical identification of Folly with Madness, in the frequent conjunctions of these terms 'madness and folly,' Eccl. i. 17, ii. 12, vii. 25, ix. 3, x. 13; the Epicurean doctrine that men are but as beasts in Eccl. iii. 18–20; and the Epicurean conception of Pleasure as the chief good in Eccl. v. 18–20.
49 This point has been most ably investigated by Canon Lightfoot, in his Dissertation on 'St. Paul and Seneca,' and of his conclusions we avail ourselves.
brought up as a Pharisee, in a sect which had a natural, and probably an historical, affinity with the Stoical doctrines. His master was Gamaliel, "the most liberal teacher of the day, who had no dread of Greek learning." St. Paul's writings show him to have imbued the current Greek cultivation. When he came to Athens, after encountering certain philosophers of the Epicureans and of the Stoics, he "stood up in the midst of Mars' Hill" and addressed the multitude. While speaking to the mass of the Athenians, and making its popular superstition his starting-point, St. Paul appears to appeal to the philosophic part of his audience, weaving in their ideas into his speech, referring to their literature, and producing "a studied coincidence with their modes of expression." Thus the cosmopolitan theory of the Stoics seems distinctly assumed,²⁰ and both Aratus and Cleanthes may be comprehended under the terms "certain of your own poets have said";³¹ and in the saying that "God dwelleth not in temples made with hands" St. Paul agrees remarkably with the expressions of Zeno (ap. Plutarch De Repug. Stoic. c. 2). But it was not merely when he was addressing an Athenian audience that St. Paul made use of Stoical forms of expression. "As the speculations of Alexandrian Judaism had elaborated a new and important theological vocabulary, so also to the language of Stoicism, which itself likewise had sprung from the union of the religious sentiment of the East with the philosophical thought of the West, was due an equally remarkable development of moral terms and images. To the Gospel, both the one and the other paid their tribute. As St. John (nor St. John alone) adopted the terms of Alexandrian theosophy

---

as the least inadequate to express the highest doctrines of Christianity, so St. Paul (nor St. Paul alone) found in the ethical language of the Stoics expressions more fit than he could find elsewhere to describe in certain aspects the duties and privileges, the struggles and triumphs, of the Christian life.\textsuperscript{52} Instances of 'the characteristic commonplaces of Stoic morality' emerging in the writings of St. Paul are as follows: (1.) The Stoical ideal of the wise man (so full of paradox, see above, page 321), with his perfect self-sufficiency—who alone is free, alone is happy, alone is rich, alone is king and priest—was a topic that furnished to St. Paul many a passage both of irony and earnestness. 'Even now are ye full,' he says to the Corinthians,\textsuperscript{53} 'even now are ye rich, even now are ye made kings without us'; 'we are fools for Christ, but ye are wise in Christ: we are weak, but ye are strong: ye are glorious, but we are dishonoured.'\textsuperscript{54} 'All things are yours.'\textsuperscript{55} And of himself he speaks 'as being grieved, yet always rejoicing; as beggars, yet making many rich; as having nothing and yet possessing all things.'\textsuperscript{56} 'In everything at every time having every self-sufficiency (\textit{αὐτοδύνασθαι}), in everything being enriched.'\textsuperscript{57} 'I have learnt, in whatsoever circumstances I am, to be self-sufficing. I have all strength in him that giveth me power. I have all things to the full and to overflowing.'\textsuperscript{58} (2.) The Stoical cosmopolitanism, the idea of a city coextensive with the universe (see above, page 325), furnished another set of images to St. Paul. 'Our citizenship is in heaven.'\textsuperscript{59} 'Therefore ye are no more strangers and sojourners, but fellow-citizens with the saints and members of God's house-

hold." 60  "Fulfil your duties as citizens worthily of the
gospel of Christ." 61  "We being many are one body in
Christ, and members one of another." 62  "There is neither
Jew nor Greek; there is neither bond nor free; there is no
male or female; for ye are all one in Christ Jesus." 63  "Not
Greek and Jew, circumcision and uncircumcision, barbarian,
Scythian, bond, free: but Christ is all things and in all." 64
Such was the noble use that St. Paul made of Stoical ideas
and forms of thought; with him the spirit of Christianity
purifies these ideas from their alloy and turns them into
pure gold. But it cannot be doubted that Stoicism, by the
early and not unengenial influence which it had produced
upon the mind of St. Paul, contributed something to the
form under which Christian doctrine was set forth by its
greatest expositor. On the other hand there are no good
grounds for believing that Stoicism ever received any in-
fluence from Christianity. The hypothesis of an intercourse
between St. Paul and Seneca has no historical foundation.
And internal evidence forbids our supposing that either
Seneca, or any other Stoical writer, borrowed from, or was
acquainted with, the Christian doctrines.

Having now traced some indications of the effect pro-
duced by Stoicism on the eastern shores of the Medi-
terranean, let us turn to watch its promulgation in the West
and throughout the Roman world in general, where it was
destined to play the part of, to some extent, a regenerating
element in the last days of Pagan civilisation. There was a
direct succession, as we have seen above (p. 307), in the lists
of the Stoic doctors from Chrysippus to Posidonius, and
Posidonius was master to Cicero. During the interval

---

60 Gal. iii. 28.
61 Col. iii. 11.
spanned by these successive teachers (from 200 B.C. to 50 B.C.), many circumstances turned the tide of philosophy towards Rome, and commenced the intellectual subjugation of the victors in the domain of thought as well as of imaginative literature. The first awakenings of the national curiosity are somewhat obscured. Aulus Gellius records a decree of the Senate, of the date B.C. 161, for banishing from Rome philosophers and rhetoricians, at the instance of M. Pomponius, the praetor. This fact appears to stand in isolation. Six years later (B.C. 155), we hear of the famous embassy of the philosophers sent from Athens to Rome to obtain the remission of a fine. Doubt has been thrown on the reality of this event. But independently of the constant oral tradition from Scipio and Lælius down to Cicero, the historical certainty of the embassy is established by a reference which Cicero makes to the writings of Clitomachus, a Carthaginian philosopher who settled at Athens, and was disciple to Carneades immediately after the date assigned to the embassy, and who therefore is an undoubted authority for the facts. However, we may easily believe that the story has been decked out and improved. In some accounts, Carneades the Academic, and Diogenes the Stoic, are mentioned as the envoys; but other accounts, probably for completeness' sake, add Critolaus the Peripatetic. And hence it came to be said that these three represented the three styles of oratory—the florid, the severe, and the moderate. Cicero tells us of a philosophic party at Rome, in compliment to whom these particular ambassadors were sent; while, on the other hand, Cato the Censor viewed with impatience their favourable reception, and urged upon

68 De Oratore, ii. xxxvii
the Senate their speedy dismissal. The most interesting anecdote connected with this embassy is that quoted from the works of Clitomachus,—that A. Albinus, the prætor, said to Carneades in the Capitol, before the Senate, 'Is it true, Carneades, that you think I am no prætor because I am not a wise man, and that this is no city, and that there is no true state in it?' To which Carneades replied, 'I don't think so, but this Stoic does.' This story amusingly represents the confusion in the mind of the Roman prætor, who did not distinguish between the philosophical schools, but was struck by the great paradox he had heard, and was not able to comprehend that inner point of view from which it was said that mighty Rome was no city, and the august prætor had no real office or authority at all.

The anti-philosophical party seem to have continued their exertions at Rome, and under the date 93 B.C. we read of a decree of the censors Domitius Aenobarbus and Licinius Crassus against the schools in which a new sort of learning was taught by those who called themselves Latin rhetoricians, and where youths wasted their whole days in sloth. This decree is in fine grand Roman style; it says, 'these things do not please us.' But it was in vain to attempt resisting the influx of Greek philosophy, when the leading and most able men warmly welcomed it. Africanus, C. Laelius, and L. Furius were extremely pleased at the embassy, and always had learned Greeks in their company. A little later than 150 B.C., no one was more instrumental in recommending Stoicism to the Romans than Panatius of Rhodes, whose instructions in Athens were attended by Laelius and his son-in-law, C. Fanucius, and also by the conqueror of Carthage, ied the latter on his famous mission to

s Gellius, xv. xi.
the courts in Asia Minor and Egypt. He is always spoken of as the friend and companion of Scipio and Lælius. He is recorded to have sent a letter to Q. Tubero, on the endurance of pain. Not only by personal intercourse did Panætius influence the cultivated Romans, but also still more by his books. These seem to have been of a character eminently fitted for the comprehension of the Romans, being extremely practical, avoiding the harshness and severity of the early Stoics, and being free from ‘the forms of dialectic.’

One peculiarity above all, while it made Panætius a worse Stoic, made him at the same time a more attractive expositor of philosophy, and was only a fulfilment, after all, of the destiny of Stoicism—namely, his tendency to eclecticism. He constantly had Plato, Aristotle, Xenocrates, Theophrastus, Dioc-archus, in his mouth; he was always speaking of Plato as divine, most wise, most holy, and the Homer of philosophers. We can form a very good conception of his writings from Cicero’s work On Offices, which is taken almost exactly from Panætius’ On Things Suitable. An extract verbatim, from the latter, is preserved by Aulus Gellius. It recommends those who are mixed up in affairs to be on their guard, like pugilists, against every sort of attack. It is in rhetorical style, and full of a sensible worldly prudence. Such prudence is no more alien from a particular phase of Stoicism, than it is from a particular phase of religion.

Posidonius (B.C. 135–50) maintained the same intercourse with the Romans, and the same eclectic tendencies as his master. After the death of Panætius (B.C. 112), he made some extensive travels for the sake of physical enquiry. At Cadiz he spent some time in observations on the sunset; he visited Sicily, Dalmatia, and other countries, and fin:

---

70 Cicero, De Fin, iv. xxviii. 79.
71 Cicero, Tusculan. Disputat. 1. xxxii. 79.
settled in Rhodes. Strabo, with a sympathy for his geographical knowledge, called him 'the most learned philosopher of the day.' In the year 86 B.C. he was sent as ambassador to Rome, and became acquainted with Marius. Pompey visited Posidonius twice in Rhodes (67 and 62 B.C.); and the story goes that on one of these occasions, Posidonius having a bad fit of the gout, discoursed from his bed to Pompey on the topic 'that virtue is the only good, and that pain is no evil.' Cicero also studied under him in Rhodes; and finally, coming to Rome in his old age (B.C. 51), he died there a short time afterwards, having had as his hearers C. Velleius, C. Cotta, Q. Lucilius Balbus, and probably Brutus. Posidonius wrote a commentary on the *Timæus* of Plato, apparently to reconcile it with the Stoical physics. He approximated in some things to Aristotle, and even, it is said, to Pythagoras. On divination, however, he reverted to the old Stoical view, abandoning the scepticism of Panætius. The ancients make mention of the elegance of his style; and Cicero, while dissenting from his opinions on fate and other subjects, speaks of him at the same time with the greatest respect.

Besides those Stoics who were of eminence and originality enough to advance, though only by amalgamation, the traditional doctrine, there were by this time many others who received it merely and adopted it as an article of faith, without thinking of addition or change. Such was probably Antipater of Tyre, who became the friend and instructor of Cato the younger. And now we find, in the last half-century before Christ, frequent instances of a new fashion in Rome—namely, for a great man to maintain a philosopher in his modern days a private confessor. Of this custom himself an instance, for he is reported

"utarch, Cato Minor, c. x."
to have made a journey to Pergamus with the express object of inducing the famous Stoic Athenodorus, surnamed Cordylion, to accompany him to Rome, in which mission he succeeded, and brought back the sage in triumph, who ended his days in the house of Cato. After this, at Utica, Cato appears to have had among the members of his family Demetrius a Peripatetic, and Apollonides a Stoic. On the night before Cato’s suicide, they disputed with each other on the paradox that the Wise Man only is free, Cato warmly supporting the Stoical side. Another Athenodorus, of the same sect, but surnamed Cananites, was highly honoured by the great Augustus. Attracting the notice of the Emperor at Apollonia, where he held a school, he was invited to Rome, and had the young Claudius placed under his instruction. In his old age returning to Tarsus, he seems to have procured some advantages for his country through his influence with Augustus. Among the few works attributed to him there is one with an eminently Stoical title, *On Earnestness and Education*.

Arguing by analogy from these external indications, we may imagine the Roman nation at this period imbibing Greek philosophy, or so-called philosophy, at every pore. The Romans, indeed, had not the slightest stomach for metaphysics, and in no one of their writers do we find any trace of a real acquaintance with the systems of Plato or Aristotle. But we can find abundant traces of an acquaintance with Epicurus and Chrysippus, and Panætius and Posidonius. The inducement of the Romans in taking up with this kind of literature was twofold: first, a natural affinity for practical moralising and maxims of life; second, a rhetorical necessity—the desire to turn sentences, to be terse, apposite,

13 Smith’s *Dictionary of Greek and Roman Biography*, s.v.
weighty. The constant practice of declamation gave an immense stimulus to the sermonising tendency of the day, and as the despotism of the Empire shut up other subjects, declamation became more and more exclusively moral. Instruction under some Greek rhetorician became part of the education of a Roman youth, and in Athens, Rhodes, Marseilles, and Alexandria, everywhere throughout the great Roman world, Sophists and declaimers might be heard setting forth the theses of the different schools, among which the florid paradoxes of the Stoics were no doubt most striking and attractive.

The Romans who took any side in philosophy invariably became either Epicureans, Stoics, or Academics, or else, as was not unfrequent, they combined the Academical opinions on knowledge with the Stoical morals or some admixture of the Stoical physics. This was the case with L. Lucullus, with M. Brutus, and Terentius Varro. Cicero’s creed we know to have been a learned and sensible eclecticism, a qualified Stoicism with a use of the Academic arguments, and an approach in some things to the Peripatetic views. Such a compound was suitable to a statesman and a man of letters; it exhibits acuteness, refinement, breadth of view, and an affinity to what is elevated in the different systems: but at the same time it avoids all extremes, and shuns that unity of principle on which philosophy, properly so called, depends. When such a balance as this was wanting, the Romans joined the opposite ranks of the Stoics or the Epicureans. To either side they had certain elements that inclined them. Their capacity for the physical enjoyment of life, their taste for rural ease and the delights of their beautiful at healthy realism which we find expressed by tended to recommend the Epicurean doctrine and added to these predisposing causes.
was the fact that the first book of philosophy written in the Latin language was the work of one Amafinius, setting forth Epicurism. This treatise, though of no merit according to Cicero, had immense influence, and brought over the multitude to adopt its views. "Other works of a similar character followed, and through their popular style took possession of the whole of Italy." Of this phase of feeling hardly any trace remains to us, if we except the splendid poem of Lucretius, and the record of one or two great names among the Roman Epicureans, such as Atticus, the friend of Cicero, Cassius, the murderer of Caesar, L. Torquatus, and C. Velleius. Perhaps its most lasting result was the spread of 'a wisdom,' as Livy calls it, 'which had learned to despise the gods.' Epicurism was transient in Rome, like Sentimentalism in England, because alien to the national characteristics; for on the whole the Romans were far more disposed to energy and sublime virtue, and the conquest of external circumstances, than to easy and harmonious enjoyment. Without a great intellectual capacity for the apprehension of the universal, there was yet something abstract about their turn of mind; this is shown in their love of law, and in the sternness of the high Roman mood. It has been often said that the old Roman worthies were unconscious Stoics. And now, from Cato to M. Aurelius, we find through the Roman empire an immense diffusion of Stoical principles and of the professors of Stoicism.\(^73\)

\(^71\) Cicero, Tusc. Disp. iv. iii.; Acad. Post. ii.

\(^73\) Among the most celebrated of these is to be named Q. Sextius, contemporary with Julius Caesar, who founded a school. This school, Seneca tells us (Quaest. Nat. vii. xxxii.), began with great delat, but soon became extinct. He says of Sextius that he was 'a great man and a Stoic, although he himself denied this.' Sextius appears to have followed Pythagoras in some points, and to have enjoined abstinence from animal food. Sotion, the disciple of Sextius, was Seneca's master, and induced him to practise this
III. These professors assumed, it appears, not only distinctive principles, but also certain external marks and badges of their sect. We read in Juvenal 76 of the 'long robe' as synonymous with Stoicism; in Persius we read of their close-cropped hair, 77 and their look of having sat up all night; in Tacitus, 78 of their set countenances and gait expressive of virtue. Like their Jewish counterpart, the Pharisees, they were formal, austere, pretentious, and not unfrequently hypocritical. Under the mask of asceticism, they appear sometimes to have concealed gross licentiousness, 79 and under their sanctimonious face the blackest heart. With bitter indignation does Tacitus 80 record the perfidy of Publius Egnatius Celer, the Stoic philosopher, the client, the instructor, and the false friend of Barea Soranus, whom, with his daughter, he betrayed to Nero, by giving the lying evidence which procured their deaths. Such cases as this, however, are to be regarded like stories of the corruption of priests and monks, and to be judged apart, as giving no sufficient clue to the working of the system. Partly they illustrate the maxim that 'that corruption is worst which is the corruption of the best; ' partly they show that an elevated and spiritual creed is apt, by the very nobleness of its appearance, to attract unworthy followers. We may also add that, beside the antinomian tendencies which might

---

kind of asceticism at one time; but after a year's trial of it, he was persuaded by his father, who 'hated philosophy,' and who dreaded the imputation of certain foreign superstitions, to return to the common mode of diet. (Ep. ivii.) What is most remarkable about Sextius is his daily habit, according to Seneca (De Imm, vii. xxxvi.), of self-examination. This shows the spirit of the times.

logically be connected with this creed, there was a narrowness in the intensity of Stoicism, and an abstract unreality about its ideas, not favourable to the development of the more human virtues. Acknowledging these things, we may turn away from this ungracious side of the system, and leave it to the tender mercies of the satirists. For even externally, Stoicism, on the whole, presented a better aspect and won a better opinion than this from intelligent observers during the early Roman empire. Nothing can be more significant than the accusation brought against C. Rubellius Plautus by Tigellinus. This Plautus was son of Julia, and great-grandson of Tiberius. Becoming an object of suspicion to Nero, he retired—not from the Roman world, for that was impossible, but from the Court—to Asia, where he lived in the pursuit of the Stoic philosophy. Tigellinus, to stir up Nero’s hatred against him, declared, ‘That man, though of immense wealth, does not even pretend a wish for enjoyment, but is always bringing forward the examples of the ancient Romans. And he has now joined to these ideas the arrogance of the Stoics—a philosophy which makes men turbulent and restless.’ It is easy to see that this accusation was a panegyric. It was followed up by an order sent from Nero that Plautus should be put to death. His friends counselled resistance, but Cæranus and Musonius Rufus, two philosophers who were with him, preached the doctrine of resignation and fortitude; and armed with their suggestions, he met his death unmoved. This manner of death and life was not confined to Plautus: the reigns of Claudius and Nero exhibit a constellation of noble characters, formed on the

81 See above, p. 322.
model of the younger Cato, and showing the same republican front and the same practical conception of Stoicism as he did. Such were Cæcina Paetus and his heroic wife Arria, who died at the command of Claudius. Such was Soranus Barea, already mentioned, and such Thrasea, and his son-in-law Helvidius. Seneca, too, in his death, at all events, must be added to the list—a list of martyrs at a time when all good eminence was sure to attract the stroke. There is something perhaps theatrical and affected about the record of these death-scenes. When we think of Cato arguing on the freedom of the wise man, and then reading the Phædo through the night, before he stabs himself; when we think of Thrasea pouring out a libation of his own blood to Jupiter the Liberator, and discoursing in his last moments with the Cynic Demetrius on immortality—it seems as if these men had played somewhat studied parts. Such scenes appeal to the rhetorical faculty, rather than to the imagination and the heart. But it is the privilege of certain unhappy periods to be rhetorical. It is the privilege of patriots in miserable days to be excited, strained, unnatural. And hence we can understand how it was that from the Girondists in France the Roman Stoics obtained such sympathy and admiration.

And now let us take some notice of the character and the thought of Seneca, a man who has been most differently estimated, according to the temperament of his judges, and according as he has been taken at his best or his worst. Probably we may admit almost all the accusations against him, and yet end without judging him too hardly. When just rising into success, Seneca was banished by Claudius, on an obscure charge preferred by Messalina. From Corsica, his place of banishment, he addressed what was called a 'Consolation' to Polybius, the freedman of the Emperor, on the death of his brother. Seneca's object in this 'Consolation'
was to effect his own recall, and the means he used were the most fulsome and cringing terms of flattery towards Claudius. His mean adulation quite failed in obtaining his pardon; and he was only recalled after eight years’ exile, through the influence of Agrippina, who made him tutor to her son Domitian, the future emperor Nero. In the museum at Naples one sees frescoes brought from Pompeii, which represent a butterfly acting as charioteer to a dragon. These designs were meant to caricature the relationship of Seneca to his pupil Nero. No doubt he was drawn violently and without the power of resistance through much that was unseemly by his impetuous charge. No doubt he tried, with the help of Burrus, to keep the reins straight. But he was obliged to connive and even assist at things which made people say, with natural surprise, ‘This is a strange part for a Stoic to play.’ The poor painted butterfly behind the dragon could not choose what part he should play. Other things that have been complained of in Seneca are his violent reaction of spite against Claudius, shown in the satire which he wrote upon his death; his reputed avarice, and the enormous fortune which in a short time he actually amassed under Nero; certain scandalous intrigues, with regard to which there really is not evidence enough to enable us to say whether Seneca was guilty of them or not; and lastly, his possible complicity in the murder of Agrippina. Seneca was no Roman, but a Spaniard, and we can fancy how the milk of his flattery towards Claudius turned sour during his eight years’ exile, and how deep resentment settled in his heart. With regard to his accumulating wealth when it was in his

---

83 Canon Lightfoot thinks that Seneca may have had Semitic blood in his veins, as his native province, Battea, had been thickly populated with Phoenician settlers, and the name Σερεκάρ appears in a list of Jewish names. This, however, is mere conjecture.
power to do so, we may perhaps explain it to ourselves, by remembering that many ecclesiastics professing a still more unworldly creed than Stoicism have done the same. With regard to his privity to the death of Agrippina, all that can be said is that Seneca was, towards the end of his career, so thoroughly scared by Nero, that all power of independent action was taken from him. Physically timid and gentle by nature, Seneca was not born to play a consistent and unyielding part. Considering his hideous position, we may well condone his offences. If we study his writings, and especially his letters, we shall see that he possessed one essentially Stoical characteristic, namely, the intense desire for advance and improvement. The picture of the inner life of Seneca, his efforts after self-discipline, his untiring asceticism, his enthusiasm for all that he esteems holy and of good report—this picture, marred as it is by pedantry, and rhetoric, and vain self-conceit, yet stands out in noble contrast to the swinishness of the Campanian villas, and is in its complex entirety very affecting.

The works of Seneca are over-harsly judged by those who have no taste except for metaphysical philosophy, or who, expecting to find such in Seneca, have been disappointed. But if we approach these writings from a different side, and look at them historically and psychologically, as the picture of the times and the man, we find them full of interest. If we can endure being a little cloyed with excess of richness in the style, if we can pardon occasional falsity and frequent exaggeration, we shall discover in them a most fertile genius, and a vein of French wit, so to speak, which is always neat and clever, and often surprising, on the tritest moral subjects. Of all sets of letters that have ever been preserved, there is none that exhibits better and more vividly the different phases of a peculiar idiosyncrasy—of a mind under the dominion
of a peculiar kind of thought—than the *Epistles* of Seneca. Let us take a glance at the more striking features of their contents, and see what sort of a working in the heart was produced by Stoicism under the circumstances of the case. The *Epistles* of Seneca consist of one hundred and twenty-four letters, written almost continuously in the old age of their author, and all addressed to a person of the name of Lucilius. The first point to be noticed about them is their entire abstraction from all public events of the day, an abstraction very Stoical in itself, and very significant also of the ungenial atmosphere of the political world. Only one allusion is there to Nero, where Seneca takes occasion (*Ep. 73*) to find fault with the opinion that philosophers are necessarily turbulent and refractory, and despisers of the ruling power. 'On the contrary,' he says, 'none are more grateful to him who affords them security and tranquillity of life. They must regard the author of these blessings in the light of a parent.' 'Like Tityrus, they must say that a god has provided them tranquillity, and left their cattle to roam and themselves to play the pipe.' 'The leisure thus granted them is indeed godlike, and raises them to the level of the gods.' In such terms does Seneca appreciate the hours of gilded oppression and treacherous reprieve which were conceded him. Most naturally the topics of his correspondence were not political. His letters were uniformly didactic and moral. In them we see developed the passion for self-improvement and for the cultivation of others. Both by nature and from the influences of Stoicism, Seneca was essentially a schoolmaster; it was evidently the foible of his life to be bringing some one on; he was a pedagogue to himself, and he wanted somebody else whom he might lecture. Of this tendency Lucilius was made the victim. On one occasion he seems to have remonstrated, and to have reminded Seneca
that he was forty years of age, and rather old for schooling (Ep. 25). But Seneca will not be deterred. He says it shall not be his fault if his friend does not improve, even though the success be not very brilliant. In every shape and from every side he urges upon him cultivation, and once fairly tells him he cannot remain on the footing of friend unless he cultivates himself and improves (Ep. 35). He hails his good deeds with triumph; rejoices to hear that Lucilius lives on terms of familiarity with his slaves (Ep. 47)—‘are they not,’ he asks, ‘men like ourselves, breathing the same air, living and dying like ourselves?’—praises a book he has written, lectures him on the economy of time (Ep. 1); tells him to be select in his reading (Ep. 2); bids him examine himself to see whether he is progressing in philosophy or in life, since only the latter is valuable (Ep. 16); above all, exhorts him without ceasing to get rid of the fear of death, ‘that chain which binds us all’ (Ep. 26), though he is half afraid, as in one place he naïvely confesses (Ep. 30), that Lucilius may come to dread his long-winded letters more even than death itself. However, as a compensation, he promises his friend that these epistles shall ensure him a literary immortality, just as the letters of Cicero had made the name of Atticus immortal (Ep. 21).

Such is a specimen of the didactic element in the letters of Seneca; the indications of his own self-discipline and conscious self-culture are equally pregnant and still more characteristic. One sentence of his might be taken as the summary and expression of his entire spirit. In speaking of the state of the ‘advancing man’ as distinguished in Stoical parlance from the ‘wise man,’ he says (Ep. 71), ‘It is a great part of advance to will to be advancing. Of this I am conscious to myself; I will to advance, nay, I will it with my whole heart.’ In the will thus fixed and bent there is often
a sort of unreal triumph, independent of actual success or failure. Seneca does not conceal from us his failures in realising his conception of philosophic behaviour. But while he confesses, he is never humbled. Rather he seems proud of detecting his own falling off. On one occasion (Ep. 87) he relates an excursion which he made into the country with a friend, and in which he says they spent 'two delightful days.' They took very few slaves, and one rustic vehicle. On meeting with persons riding in grander equipages, he tells us, he could not refrain from blushing, and secretly wished that they should not think that this sordid conveyance belonged to him. 'I have made but little progress as yet,' he sighs, 'I dare not yet openly assume frugality. I mind the opinions of passers-by.' Whereupon he proceeds to lecture down this weakness in the grandest terms, and occupies many pages of a letter in proving that riches are not a good. On another occasion he recounts a voyage which he had undertaken from Naples to Puteoli (Ep. 53). In these few miles the sea became rough, and the philosopher grew sick, and, unable to endure the horrible sufferings of his position, he commanded the pilot to set him ashore. 'As soon as I had recovered my stomach,' he says, 'I began to reflect what a forgetfulness of our defects follows us about.' Pursuing this train of reasoning, he enters upon the praises of philosophy, and soaring far above sea-sickness, he exclaims, 'Philosophy sets one above all men, and not far behind the gods. Indeed, in one point the wise man might be said even to surpass the Deity; for the Deity is fearless by the gift of nature, but the wise man by his own merits.' This last saying, which is often quoted against Seneca, is perhaps the most foolish thing he ever said, and must not be taken as an average specimen of his thoughts. One failure which he ascribes to himself may be justly reckoned as a merit; for
The Epistles of Seneca.

while dissuading Lucilius (Ep. 63) from overmuch grieving at the loss of a friend, he says, 'I myself so immoderately wept for Annaeus Senenus, that I must rank among the bad examples of those who have been overcome by grief.' And he reflects that the reason of this weakness must have been that he had not sufficiently considered the possibility of his friend dying first. We may also attribute it to the existence in Seneca of an affectionate heart, which had not been entirely supplanted by the abstractions of Stoicism, not entirely 'sicklied o'er by the pale cast of thought.' After alluding to cases where Seneca confessed to have fallen from the philosophic height, it is surely fair not to leave unrecorded an occasion where he effected an important triumph of the will. The kind of self-discipline chosen was somewhat surprising; it is related in the Fifty-sixth Epistle, where Seneca tells his friend that he had taken lodgings 'over a bath.' He details with minuteness the various mixed and deafening sounds by which his ears were perpetually assailed. He could hear distinctly the strong fellows taking their exercise—throwing out their hands loaded with the dumb-bells—straining and groaning—hissing and wheezing—breathing in every kind of unnatural way—at another moment some one having his shoulders slapped by the shampooper—a hue and cry after a thief—a man practising his voice in the bath—people leaping and splashing down into the water—the various cries of the piemen and sellers of baked meats, as they vended their wares—and several other sounds, to all of which Seneca compelled his mind to be inattentive, being concentrated on itself. The power of abstraction gained by such a discipline he seems to have thought very valuable. At the end of his letter, he declares that as the experiment is quite successful, and as the sounds are really abominable, he has now determined to change his quarters.
About such moral peddling as this, there is of course nothing great. But the spirit which actuates it is in its origin deep and good, and is only not admirable when it becomes perverted. The conscious desire for moral progress becomes unfortunately very easily perverted; it degenerates too often into small self-analysis, and that weak trifling which is most utterly opposed to real progression. We find Seneca remaining in his moral nature a strange mixture of the pedant and the schoolboy; on the one hand always teaching himself, and on the other hand with everything to learn; and yet still, with all its imperfections, we may question whether this attitude is not more human and better than anything like an Epicurean acquiescence and content in one's nature as it is. That self-reflection, that communing of man with his own heart, which the tendencies of Stoicism and the course of the world's history had now made common, produced in Seneca occasionally intuitions into the state of the human race, which he expresses in language curious to meet with in the writings of a Pagan. He says (De Clementia, i. vi.):

"Conceive in this vast city, where without cease a crowd pours through the broadest streets, and like a river dashes against anything that impedes its rapid course—this city, that consumes the grain of all lands—what a solitude and desolation there would be if nothing were left save what a severe judge could absolve of fault! We have all sinned (peccavimus omnes), some more gravely, others more lightly, some from purpose, others by chance impulse, or else carried away by wickedness external to them; others of us have wanted fortitude to stand by our resolutions, and have lost our innocence unwillingly and not without a struggle. Not only we have erred, but to the end of time we shall continue to err. Even if anyone has already so well purified his
mind that nothing can shake or decoy him any more, it is through sinning that he has arrived at this state of innocence.'

Those who have been anxious to obtain the authority of Aristotle for the doctrine of 'human corruption' will find on consideration that this idea, which was historically impossible for a Greek of the fourth century B.C., came with sufficient vividness into the consciousness of persons in the position of Seneca, but not till much later than Aristotle, probably not before the beginning of our era. On the other hand, we are not to fancy that the thoughts of Seneca received any influence from Christianity. We learn from passages like that above quoted, not that Seneca had any acquaintance with Christian doctrines, but that some of the thoughts and feelings which St. Paul had about the world were held also by Pagans contemporaneous with him.

There is one more characteristic of the letters of Seneca which ought not to be left unmentioned, and that is, the way in which they are perpetually overshadowed by the thought of death. The form assumed by this meditatio mortis is a constant urging of arguments against fearing to die. These arguments are, as might be expected, infinitely varied and ingenious. 'Death,' he says, 'lurks under the name of life. It begins with our infancy.' 'It is a great mistake to look forward to death, since a great part of it is already over. We die daily' (Ep. 1). 'Death is no punishment, but the law of nature.' 'Children and idiots do not fear death, why cannot reason attain to that security which folly has achieved?' (Ep. 36). 'Death is the one port in a stormy sea—it is either end or transition (aut finis est aut transitus) —it brings us back to where we were before birth—it must be a gain or nothing.' 'The apparatus of death is all a cheat; if we tear off the mask, there is nothing fearful.'
'Behind fire and steel and the ferocious crowd of executioners there is death hiding—merely death, which my slave or my waiting-maid has just despised' (Ep. 24). Not content with bringing forward these considerations dissuasive of terror, Seneca in other places does all he can to familiarise the mind with the idea of suicide. He says, 'There is nothing more contemptible than to wish for death. Why wish for that which is in your power?—die at once, if you wish to do so' (Ep. 117). He relates with approbation the suicide of his friend Marcellinus, who, being oppressed with a long and troublesome invalidism, was recommended by a Stoic to give up the trivial round of life; whereupon, having distributed his goods among his weeping slaves, he effected death by a three-days' abstinence from food, betaking himself to a hot bath when his body was exhausted, wherein he fainted and died (Ep. 77). Other instances of self-destruction are scattered through the letters of Seneca, some of which give a sad illustration to the unhappiness of the times. It seems to have been not uncommon for the wretched captives who were doomed to the conflicts of the arena to steal themselves away, sometimes by the most revolting modes of death. And it is surely a miserable sign when cultivated men of the day look on such deeds with pleasure and admiration. So great was the tendency to suicide under Claudius and Nero, that even Seneca on one occasion acknowledges that it is excessive. He says, 'We ought not to hate life any more than death, we ought not to sink into that mere life-weariness to which many are prone who see nothing before them but an unvarying routine of waking and sleeping, hungering and eating.' But the majority of Seneca's arguments are in the other direction. They are the results of a deep sense of unhappiness and insecurity, which existed side by side with his philosophic self-complacency. They
were connected, on the one hand, with a timidity of nature and a real love of life; on the other hand, with a presentiment of evil and a sense of the necessity of preparing for the worst. When death suddenly and actually came upon Seneca,—like Cicero, he met it with fortitude, in spite of his timidity, and probably not on account of his previous reasonings, but from an innate elevation of mind called out on emergency. We have observed that Seneca spoke of death as 'either end or transition;' this sums up his views of the future under an alternative. But his real tendency was to Platonic visions of the soul freed from the trammels of the body and restored to freedom. He is unwilling that Lucilius should arouse him from the 'pleasant dream' of immortality. He likes to expatiate on the tranquillity of mind and absolute liberty which await us 'when we shall have got away from these dregs of existence into the sublime condition on high.'

It is a great contrast if we turn from Seneca to Epictetus. It is going from the florid to the severe, from varied feeling to the impersonal simplicity of the teacher, often from idle rhetoric to devout earnestness. No writings of Epictetus remain, but only (what is perhaps equally interesting for us) records of his didactic conversations, preserved as near as

---

84 See above, page 332, where in an extract from Zeller we have anticipated the mention of Seneca's fondness for dwelling on the imagination of a future state.
85 We have not entered upon the analysis of Seneca's philosophical works, because, in short, they are not speculative and philosophical, but of the same moralising stamp as his letters. It is, however, just to pay a tribute to the force of imagination shown by him in preconceiving the physical discoveries of future ages (see his Naturales Questiones, vii. xxxi.). 'Quam multa animalia hoc primum cognovimus seculo! quam multa negotia ne hoc quidem! Multa venientia avi populus ignota nobis sciet. Multa secula tunc futuris, cum memoria nostri exolverit, reservantur.' Through his vividness of mind, this Spaniard of the first century has got the credit of predicting elsewhere, in terms remarkably coincident, the discovery of America.
possible in his own words by Arrian, the historian, who studied under him at Nicopolis. Epictetus was a lame slave, the property of Epaphroditus, who was himself the freedman and the favourite of Nero. While yet a slave, Epictetus was won over to the Stoic doctrine by Musonius Rufus. Obtaining his freedom, he taught in Rome, and afterwards, when the philosophers were banished from the city by Domitian, in Nicopolis of Epirus. What is most striking about his discourses is their extremely religious spirit, and the gentle purity of the doctrines they advocate. In them Stoicism reached its culmination, and attained an almost entirely un-pagan character; its harsher traits were abandoned, and while Epictetus draws the picture of the wise man under the name of Cynic, there is hardly a trace of anything cynical in the life which he recommends. To mention the subjects of some of his discourses may serve to give an idea of their nature. The following headings strike the eye:—‘On things in our power and not in our power.’ ‘How to preserve one’s own character in everything.’ ‘How to follow out the conception that God is Father of mankind.’ ‘On moral advance.’ ‘On Providence.’ ‘On equanimity.’ ‘How to do all things pleasing to the Gods.’ ‘What part of a sin is one’s own.’ ‘On moral training.’ As might be conjectured, there is nothing speculative in these discourses. Epictetus both received and imparted philosophy as a fulfill-

Musonius Rufus, whom we have noticed before as the companion of Rubellius Plautus in Asia, returned from exile on the accession of Galba; and when Antonius Primus, the general of Vespasian, was marching upon Rome, he joined the ambassadors that were sent by Vitellius to the victorious general, and going among the soldiers of the latter, descanted upon the blessings of peace and the dangers of war, but was soon compelled to put an end to his unseasonable eloquence.’ (Smith’s Dict. of Greek and Roman Biog.) He afterwards obtained the condemnation of Publius Celer, the traducer of Barea. (Tac. Hist. iii. 81; iv. 10, 40.) Fragments of his philosophy are preserved by Stobæus.
ing of the needs of the soul, not as a mere development of the intellect. His words on this and other subjects present very often a strange coincidence with the language of the Gospel. He says (Dissert. ii. xi. 1), 'The beginning of philosophy is the consciousness of one's own weakness and inability with regard to what is needful.' 'The school of the philosopher is a physician's house; you should not go out from it pleased, but in pain. For you come not whole, but sick—one diseased in his shoulder and another in his head' (Dissert. iii. xxiii. 30). 'Young man, having once heard these words, go away, and say to yourself, "Epictetus has not spoken them to me (from whence came they to him?), but some kind god by his means. It would not have come into the mind of Epictetus to say these things, since he is not accustomed to reason with anyone. Come, then, let us obey God, lest we should move God to anger."' 87 'The true Cynic should recollect that he is sent as a messenger from Zeus to men, to declare to them concerning things good and evil, and to show them that they seek good where it is not to be found, and where it is to be found they do not desire it' (Dissert. iii. xxii. 23).

With regard to the manifestations of Providence, Epictetus says (Dissert. i. 16, 19):—'What, then; since ye are all blind, is there not need of one who should fill up this place, and sing in behalf of you all the hymn to God? Of what else am I capable, who am a lame old man, except to sing the praises of God? Were I a nightingale, I would do as the nightingale; were I a swan, I would do as the swan. But now, since I have reason, I must sing of God. This is my office, and I perform it, nor will I leave my post, as far as in me lies, and I exhort you to join in the same song.'

87 Τα μὴ θεολόγους ἔραυ (Dissert. iii. i. 36).
If anyone will properly feel this truth, that we are all especially born of God, and that God is the father of men and gods, I think that such a one will henceforth allow no mean or unworthy thoughts about himself. If Caesar were to adopt you, would not your pride be unbearable; and now that you are the son of Zeus, will you not be elated?

(Dissert. i. 3, 1).

Such sayings as these are a specimen of the vein of piety which runs through the teachings of Epictetus. In moral life, he exhorts to purity, equanimity, and forgiveness of injuries. He draws a broad line of distinction between things in our power and things out of our power. Within our power are the will and our opinion of things; beyond our power, the body, possessions, authority, and fame. The will itself nothing can touch; bonds, imprisonment, and death itself, do not impair the internal freedom of the will. Lamelessness impedes the leg, but not the will. True wisdom and happiness consist in placing all one's thoughts and hopes on things within our power—that is to say, on the will itself and the internal consciousness. This attitude will render happiness impregnable, for the wise man will enter no contest save where he is sure of the victory.

In an exaltation of the will, and in thus withdrawing into its precincts, the Stoicism of Epictetus declares itself. To some extent he provided an objective side for his thought, by the pious and theological reflections which he introduced into his philosophy. But they were not sufficiently made to pervade his whole system, and with regard to the question of immortality he contented himself, as far as we know, with certain brief remarks, implying the utter resolution of personality after death. 'Come,' he says, 'but whither?—to nothing dreadful, but only to what is near and dear to thee, to the elements whence thou hast sprung?' (Diss. III. xiii.
"This is death, a mighty change, not into the non-existent, but into what is now non-existent. "Shall I then not exist?" No, thou wilt not exist, but something else of which the universe has need" (Diss. iii. xxiv. 94). While placing the will in our own power, Epictetus at the same time adopted an entirely necessarian scheme. He followed Plato in making vice the result of ignorance, and he considered that men differed from brutes, not in freedom, but only in consciousness (Diss. ii. viii. 4).

The same spirit as that of Epictetus the slave expresses itself in Marcus Aurelius the emperor, whose thoughts have come down to us in the shape of a monologue in twelve books. These two last great Stoical writers appear both to have been influenced by Neo-Platonic views, for which Stoicism, on its spiritual side, had a considerable affinity. The weakness of humanity is a leading idea with M. Aurelius.

"Of human life," he says (ii. 17), "the duration is a point; the substance is fleeting; the perception is dim; the fabric of the body is corruptible, the soul is an idle whirling; fortune is inscrutable, and fame beyond our judgment. In short, all that there is of the body is a stream, and all that there is of the soul is a dream and a smoke. Life is a war, and a lodging in a strange country; the name that we leave behind us is forgetfulness. What is there, then, that can conduct us? Philosophy alone. . . . Oh, my soul! wilt thou ever be good, and simple, and one, and naked, and more transparent than the body which clothes thee? Wilt thou ever be full and without a want, desiring nothing, hankering after nothing, whether animate or inanimate, for the enjoyment of pleasure, but content with thy present condition?" (x. i.)

Such are the mystical ecstasies into which Antoninus rises in communing with himself. With these, honest self-examinations and humility of feeling are often combined, and
the whole is tempered by a cold spirit of Stoical resignation. Of the philosophy of the Emperor we need not add anything further beyond one slight point, namely, that we find in him the same psychological division of man into body, soul, and spirit, as had also been employed by St. Paul. We may take our leave of the monologue of Antoninus by quoting from it his feeling about the Christian martyrs. ‘The soul,’ he says, ‘when it must depart from the body, should be ready to be extinguished, to be dispersed, or to subsist a while longer with the body. But this readiness must proceed from its own judgment, and not from mere obstinacy, as with the Christians; it must be arrived at with reflection and dignity, so that you could even convince another without declamation’ (xi. 3).

In Marcus Aurelius we appear at first sight to have the desire of Plato fulfilled. We see a philosopher on the throne. But even absolute power does not give influence or sway. Plato wished the whole State to bend and turn under the control of omnipotent wisdom, as the limbs of a man would follow the impulses of his mind. But very far was Marcus Aurelius from being gifted with that sort of electric force which could put itself out and transform the world, even if the Roman empire were not too huge and too corrupt for such a process. Philosophy in general must be considered as something incapable of coming immediately into contact with politics and practical life, and the philosophy of Antoninus consisted peculiarly in a withdrawal from the world, in self-examination, moral progress, and thoughts about God. While

---

88 "Οἱ ποτε τοῦτο εἶμι σαρκᾶ εἰστὶ καὶ πνεῦματι καὶ τῷ ἐγγεμονίκον (ii. 2).
the Emperor was thus busied more with his own soul than with penetrating State reforms, the world enjoyed a halcyon time. The ruler was mild, just, and forgiving; he had only one deficiency, but that the greatest which could possibly attach to him, namely, an utter want of insight into character. The sole exception to his clemency was that, excited probably by the narrow malignance of his fellow Stoics—he condescended to persecute the Christians. The adoration of the people showed how much the gentleness of Marcus Aurelius was appreciated,—but it is not the mild monarchs who leave permanent blessings to their country. Among his most public tastes seems to have been a fondness for jurisprudence; he produced several volumes of Constitutions. This province of industry was the one most attractive of the day. In the absence of literature, Roman jurisprudence is the one great and lasting product of the age of the Antonines.

And now a word must be said upon an often mooted and never thoroughly discussed subject—the influence of the Stoic philosophy upon Roman law. Acquaintance with Grecian philosophy in general began at Rome contemporaneously with a change in the laws. The first epoch of Roman law was an epoch of rigid forms, and a narrow but coherent system, exclusively adapted to Roman citizens. Commerce and conquest made it necessary that law should widen so as to embrace the inhabitants of the Italian States. Hence the growth of the prætor's adjudicating power. By degrees the decisions of the prætors in regard to the hitherto overexclusive laws of property, and the rights of persons born out of the Roman city, grew up into a body of equity by the side of the civil law. This body of equity, which was framed on the principles of natural reason, of course reflected the highest general enlightenment and the most cultivated ideas of the jurisconsults of the day. We have already seen that during
the first and second centuries B.C. the most eminent Romans attached themselves to the direct study of Greek philosophy. To the list of the disciples of the Stoics we may add some names more immediately connected with jurisprudence. Q. Mutius Scævola (as well as Q. Aelius Tubero) appears to have been among the hearers of Panætius. C. Aquilius Gallus and Lucilius Balbus, distinguished jurisconsults of the time of Cicero, studied again under Scævola; and Balbus, who in Cicero’s De Naturâ Deorum is made the expositor of the Stoical view, was teacher of Servius Sulpicius. Equity attained in the eyes of such persons an immense preference over the civil law. To this tendency of opinions Cicero gave a great stimulus, maintaining, as he did always, that justice must be based on humanity and reason, and “that the source and rule of right were not to be sought in the laws of the Twelve Tables, but in the depths of the human intelligence.” Now, if we wish to form an idea to ourselves of the sort of way in which philosophy at Rome influenced jurisprudence, we may think of the philosophy of Cicero, that is, a philosophy not exclusively Stoical, but eclectic, practical, and human. Even the philosophers of the Stoic school themselves were by this time, as we have seen, all eclectic. Much more, then, would the lawyers avoid any rigid adherence to one set of formulæ; they would be sure to accept a certain mixture and modification of views. A number of humane and enlightened principles were now diffused, and it is perhaps true that the most noble of these ideas were due primarily to Stoicism—as, for instance, the cosmopolitan thought, that the world is our State, and that mankind are of one race, being all the children of God. But it is true also that the general course of history had tended to foster and develop this and other ideas which Stoicism forcibly enunciated.

89 Mr. Merivale’s History of the Romans under the Empire, vol. ii. p. 528.
In the growth, then, of the Roman 'Jus Gentium,' and in the amelioration and softening of many austere legal usages (as, for instance, the absolute authority of fathers over their children), we see not simply and solely the influence of Stoicism, but of a generally enlightened practical philosophy, in which Stoicism was not more than an important element. But besides the material alterations which occurred in the spirit of the Roman laws, besides the era of the Jus Praetorium, we must look in another direction—to the era of 'codification,' if we wish to trace philosophical influences. An eminent authority maintains that 'the Stoical philosophy was to Roman jurisprudence what Benthamism has been to English law'—namely, a directing influence that came into play in the absence of any absolutely determining causes. These two principles of action might be said to be diametrically opposite to each other; for Benthamism, which looks to utility, commences with the concrete; while it is the essence of Stoicism to take an abstract point of view. The writings of Zeno and Chrysippus on the 'universal state' are lost, so we know not its details as conceived by them, but we may be sure that if Stoicism had had the framing of the laws for the Roman empire entrusted to its hands, there would have been a logical deduction from the principle of the natural freedom and equality of the whole human race. But what do we find? That slavery, even under Justinian, was mitigated, and not abolished; that men of different ranks were not equal in the sight of the law; that the civil incapacity of women (which Zeno had denied) still remained; that the application of cruel punishments, and even of torture, were treated by the new codes in a way which showed more a respect for existing usage and for the old statutes than a disposition to legislate synthetically from philosophical principles. 'Gaius, Ulpian, Papinian, and Paulus, appear very timid by the side of
Seneca and Epictetus. Perhaps this belongs of necessity to the progress of jurisprudence, that it must not break too hastily with the past; but we are obliged, if this view be correct, to confine the influence of Stoicism on Roman law to the introduction of an idea of form, to the endeavour to bring the actual under the scope of certain abstract formulæ. We must not expect to find the logical and systematic development of these formulæ, but rather we must recognise a frequent antithesis between abstract principles and the details where one might have expected them to be applied. And yet again it appears, if we look a little further, that the philosophical ideas to which the Jurists appealed, though not immediately triumphant over all other considerations in the Roman Code, did yet in some cases come into direct application; and what is of far more importance, that these principles, being enunciated with reverence, were held up for the admiration of posterity, and so came to exert an influence on the whole bearing of subsequent jurisprudence. When we read in the Digest the stately preamble concerning the Jus Naturale—which nature has taught all animals, and which is prior even to the Jus Gentium prevailing among the human race—we are apt to be most struck with the abstract and, we might almost say, futile appearance of such a principle, followed out afterwards with so little consistency. But the idea of the 'Law of Nature,' enunciated here and elsewhere in the Roman Code, being taken up by Grotius and the Continental Jurists, became a leading idea of jurisprudence, the characteristic principle of a particular school, and the antithesis of Benthamism. What is the meaning of this conception, the 'Law of Nature,' and whether it has

---

any reality or value as separate from, or opposed to, utility and experience, is a matter of keen debate amongst philosophical Jurists. It is not the province of the present Essay to enter upon this question. That which is our concern we may dismiss with only two remarks of recapitulation:—First, the idea of the Law of Nature, as introduced into the Roman law, was not by any means purely Stoical, but was the result of the general growth of ideas in the first century B.C., and was vividly apprehended by the eclectic and practical Cicero; second, this idea, though subsequently so influential, was not by any means uniformly applied in the details of the Corpus Juris.

Whatever fragments of Stoicism were preserved in the Roman law descended, no doubt, as a contribution not only to modern law, but also to modern morals. In other channels the direct connection of our own thoughts with the ancient Stoics is hard to trace, because, long before modern thought began a separate existence, Stoicism had sunk into the world, and had influenced the ideas of men far beyond its own immediate school. But in acknowledging the influence of ancient civilisation at all, in acknowledging the impress of Cicero and Tacitus, and even of the Fathers of the Church, we acknowledge to an appreciable extent a debt to Stoicism. This, while arising in a form of a Greek philosophy, was at the same time a reaction, from a Semitic point of view, against the Grecian and the philosophical spirit. Hence its affinity to modern feelings. We have seen how it held up the delights of an inner life as preferable to all tangible and palpable enjoyments, however innocent they might be; we have seen how it drew the mind away from external realities into an abstract ideal; how it delighted in the conception of moral progress and the triumph of will; how it developed the thought of duty and the responsibility of the indi-
individual; how, deserting the restrictions of national politics, it raised itself to conceive of all mankind as one brotherhood, each member standing in direct relation to God; finally, we have seen how, following its natural tendencies, Stoicism became more and more exclusively theological in its views. To some extent, then, this doctrine supplied the needs of the human soul and the wants of a spiritual religion. Running parallel with Christianity, and quite uninfluenced by it, it yet exhibited the development of pure, gentle, and unworldly thoughts in the mind. It showed us how high it was possible for the Pagans to reach. At the same time it bore upon its face its own imperfection, its onesidedness, and its unnatural and paradoxical character.
ESSAY VII.

It was not by means of his Ethical Treatise that Aristotle obtained his great and lasting influence over the mind of Europe. We have seen how, almost immediately after the death of Aristotle, Ethics in Greece were constructed afresh,—from a Greek point of view by Epicurus, and in a Semitic spirit by Zeno and the Stoics. Henceforth the Platonico-Aristotelian moral system may be said to have been superseded. Systems less philosophical and artistic, but which responded more directly to the wants of the individual soul, now occupied the attention of antiquity. When we come to Cicero, who may be regarded as a fair representation of the philosophical culture of the first century B.C., we find that he knows nothing about Aristotle's Ethics, while he is deeply imbued by many of the Stoical writings. Afterwards the tribe of professional Sophists increased and multiplied, so that Lucian said that 'it would be easier to fall into a ship without touching timber, than to go into any town without encountering a Sophist.' These persons—who were different in many ways from their predecessors of the fifth century B.C., and of whom Dion Chrysostomus was one of the highest specimens—were like modern popular preachers and
itinerant, like the mendicant orders of friars. They mixed up the sometimes incompatible theories of Plato, Aristotle, Zeno, and Epicurus, and compounded out of them a moral doctrine for the people. In the meanwhile philosophy proper (as it then existed), under the forms of Stoicism or Neo-Platonism, was always becoming more and more theological; and a scientific, but limited, system of ethics, like that of Aristotle, which treated Man as the happy citizen of a Greek republic, and which excluded all metaphysical and theological considerations, can have had no attractions for even thoughtful minds under the Roman Empire. "Then came the inundation of Barbarians, with whose uncultivated and instinctive natures a wise and refined philosophy had nothing in common. The tale of Christianity appealed to their child-like imaginations, and its simple morals to their unsophisticated hearts, and throughout the Middle Ages a religion inspired with a divine spirit, but whose outward materials consisted of a mixture of Jewish with Greco-Latin traditions, reigned supreme over men's minds. Happiness, which the philosophers had sought to find in this world in the practice of virtue, was postponed to a life to come, and Pain became the ideal of man upon earth. But as this ideal was insufficient for the conduct of society, primitive Christianity appropriated to itself the fragments of ancient wisdom which had survived the shipwreck, and the teaching of the Gospel spread them abroad." Thus Aristotle, too, was saved from oblivion. Owing, probably, to the labours of Andronicus, his works as a collective whole were still in existence. At first excommunicated as 'atheistical' and kept aloof by the Church, he was afterwards received and adopted for the sake of his method, and then almost incorporated with

1 L'Année Philosophique ; études critiques sur le mouvement des idées générales, par M. F. Pillon (Paris, 1868), p. 145.
Christianity. His Greek and philosophical point of view was utterly ignored, but his words were used to set forth the ideas of ecclesiastics and schoolmen, and his peculiar formula—logical, metaphysical, and ethical—became stamped to a remarkable extent upon the language of the world. But it must not be supposed that Aristotle, even in any sense, was read and known throughout the Middle Ages. For some centuries it appears that only the Categories and the treatise On Interpretation (neither of them, probably, genuine works of Aristotle) were studied by the schoolmen, and these only in the Latin translations of Boëthius; and yet these two treatises were the sole armoury from which the Nominalists had to fight the Realists. Afterwards the Arabian Averroes (1120-1198 A.D.) introduced a richer knowledge of Aristotle, through Spain, into Europe; and then, after the Crusades (1270), western Christendom obtained translations of all the works of Aristotle,² partly from Arabian copies in Spain, partly from Greek originals which the Crusaders brought with them from Constantinople, or other Greek cities. The first of the works translated at this time into Latin by a western writer seems to have been the Ethics,—translated by Hermannus Alemannus at Toledo, in Spain. Afterwards the Ethics were commented on by St. Thomas Aquinas, and with this commentary Dante appears to have

² In the years 1260-70, Thomas Aquinas prepared, through the instrumentality of the monk Wilhelm of Moerbeke, his new Latin translation of the works of Aristotle after Greek originals. This goes by the name of the Vetus Translatio, and its verbal accuracy is considered to place it on a level with the best MSS (Stahr, in Smith’s Dict. of Greek and Roman Biog.). The Vetus Translatio is full of a strange Latinity, which arises out of a transliteration, often incorrectly made, of Greek words into the Roman character. Thus we find ‘chaymon’ as the translation of χαλυς, ‘epychia’ of επικχεια, ‘microchindinos’ of μικροκχινδινος, &c. And medievalisms occur occasionally, such as the word ‘costa’ for a side instead of ‘latus.’
been acquainted. If one turns it over, one is struck by the straightforward manner in which it is composed; its only object seems to be to convey exactly what Aristotle said, especially by the enucleation of his arguments. Occasionally, however, it introduces a word or two for the sake of reconciling Aristotle with the doctrine of the Church. For instance, when Aristotle says (Eth. i. x. 2) that 'it is absurd to speak of a man being happy after he is dead,' Aquinas observes, 'Est notandum, quod Philosophus non loquitur hic de felicitate futurae vitæ, sed de felicitate presentis vitæ, utrum attribui possit homini dum vivit vel solum in morte.' And when Aristotle denies (Eth. x. viii. 7) that moral virtue cannot be attributed to the gods, Aquinas explains 'Diis, id est substantiis separatis,—substantiis superioribus,' thus softening Greek polytheism into the doctrine of Angels. But there can be no doubt that to some extent Aristotle exercised a secularising and pagan influence upon the churchmen who studied him so laboriously. He was now recognised as the great Encyclopedist, as the 'Master of those that know,' as the strongest of the ancients, to whom Socrates and Plato and the rest must look up. For such a position Aristotle had unconsciously laid himself out by setting himself 'to philosophize upon every department of knowledge, and not to regard mere practical utility, but as far as possible to leave nothing unexplored.' And yet 'could he have re-appeared among later generations, he would have been the first to repudiate the servility of his followers, the first to point out the inanity of Scholasticism.' He would have justly complained

8 Dante, Inferno, Canto iv. 131.
'Vidi il Maestro di color che sanno, Seder tra filosofie famiglia. Tutti lo miran, tutti onor gli fanno; Quivi vid' io e Socrate e Platone, Che innanzi agli altri più presso gli stanno.'
4 See above, page 182, note.
5 Lewes, Aristotle, p. 382.
of the prolonged monopoly of study and the undue predominance given to his Logical treatises, which he had intended to be mere *prolegomena* to the great body of knowledge. He would have complained that so much which he had left unfinished and arrested by his death, should be regarded as complete and final, to the repression of all further enquiry. When the revival of learning came, he would have been the first to welcome and extend the new discoveries, and to have sided with Galileo and Bacon against the Aristotelians.°

The *Ethics* of Aristotle do not appear at any period of the Middle Ages to have held a foremost place in the consideration of men; with this treatise Aristotle was not primarily identified, either for praise or blame. And thus the reaction made by Ramus and others against the garbled philosophy of the Aristotelians was an attack against their method in physics, and not against their ethical doctrines. Patricius, writing in 1580 A.D., gives a list of the works of Aristotle lectured on in the Italian schools. In this list neither the *Ethics* nor *Politics* are included. The works enumerated as constituting a four years' *curriculum* of study are the *Predicables* (by Porphyry), the *Categories*, *On Interpretation*, a few chapters of the *Prior and Posterior Analytics*, 4 books of the *Physical Discourse*, 2 books of the treatise *On the Heaven*, 2 of that *On Generation and Corruption*, the whole of the work *On the Soul*, and the 4 most important books of Metaphysics. Patricius speaks of this as if it had been a *curriculum* intended for medical students, to qualify them for their profession as soon as possible. If so, it is curious that the treatise *On the Parts of Animals* and that *On the Generation of Animals*

° *Discussiones Peripateticae*, Tom. i. lib. xiii. p. 173.
should not have been studied. Rather, this looks like a
scheme for general liberal education, and what we have to
notice is, that the Ethics should not have been admitted
into it.

The Renaissance and the Reformation gave rise to a
fresh start in philosophy, which commenced anew in Des-
cartes and Bacon, with two divergent but highly fruitful and
important tendencies. Ethics also were opened afresh, quite
independently of ancient systems, but still bearing traces of
the ten centuries of Theology which had brooded over
Europe. Two great conceptions, both of them Semitic in
character, Theology had bequeathed to Ethics,—the concep-
tions, namely, of the will of God and of the will of Man.
And the first speculative ethical systems of modern times, as
conceived by Spinoza and Leibnitz, essayed to fix the rela-
tion to each other of these two conceptions by the attain-
ment of a higher point of view from which they might be
reconciled. The question of Free-will and Necessity was now
the natural \(\text{άρχη} \) for Ethical science. And this consideration
alone would be enough to show how much Aristotle's system
had been left behind, how little it would suffice to meet the
exigencies of modern thought. Neither to the Theological
question, How is the freedom of the will compatible with
the omnipotence of God? nor to the Metaphysical question,
How is the independence of the will reconcilable with the
unalterable sequence of cause and effect in nature? do
Aristotle's Ethics attempt any answer. It is not merely that
the treatise takes a 'political' point of view, and defers all
metaphysical and theological questions. Aristotle argues
against the Platonic view that vice, being ignorance, is in-
voluntary. But he does so (Eth. iii. v. 2–6) on the assump-
tion that virtue is voluntary, and with the practical postulate
that man is the originator of his own actions. The real
thing is, that the question of Free-will and Necessity, as it came up in modern times, had not forced itself upon Aristotle.

A second question, which differentiates modern systems from the Ethics of Aristotle, is the seventeenth and eighteenth centuries' question of the ground of action, Why am I obliged to do this rather than that? To which in England there came various answers from Hobbes, Cudworth, Shaftesbury, Hutcheson, Butler, Mandeville, Adam Smith, Hume, and Paley; some of whom placed the ground of action in enlightened selfishness, or utility, with or without religious sanctions added, and others in an authoritative internal principle, the dictates of conscience, or an intuitive moral sense; while Kant, afterwards taking up the question, rejected, as unworthy, all external motives and inducements to right action, and endeavoured to reduce all to the idea of duty, as an à priori law of the will. On this point the utterances of Aristotle were simpler than those of the modern writers above mentioned. He took a broad view of man, as a creature in the Universe, and asked what is the chief good for man, and how is it attainable? And he answered that the chief good consists in the sense of vital action in accordance with the law of man's being (ἐνέργεια ψυχῆς κατὰ τὴν οἰκείαν ἀρετήν); that this is only permanently attainable by the formation of habits; and that habits, or formed states, arise out of acts. On the inducements to particular acts he speaks only incidentally. He says (Eth. III. i. 11) that the beauty of an act may put us under a sort of compulsion to do it; that we have an intuitive sense of moral beauty (αἰσθητικὴ μετάφρασις, see above p. 256); that we have a general wish for the good (Eth. III. iv. 4) which furnishes the idea of the end to be aimed at in action, and that it is only a very foolish person (κομιδῇ ἄναιωθήτου, Eth. III. v. 12), who does not take
the right means to this, or who forgets that a single bad act
tends to the formation of a bad habit. All this absorbs the
Right in the Beautiful and the Good, and refers everything
in life to the law of man's being; it is a great and simple
theory. Yet still the conception of the Right is deeper than
that of the Beautiful and the Good. It springs perhaps
from a Semitic source, and with its cognate conceptions of
Duty and Obligation, it predominates over the ethical systems
of modern times, which are thus strongly distinguished in
character from a Greek system of the fourth century B.C.

The Ethics of modern Europe are far more psychological
than those of Aristotle. They start with the possession of a
mass of long-inherited distinctions, the foundations of some of
which had been laid by Aristotle. He it was who, following
out the suggestions of Plato, gave the first impulse to psy-
chology by his division of the soul into rational, irrational,
or semi-rational (μετέχον λόγον) elements; by another
division of mental phenomena into δυνάμεις, πάθη, and
ἐξέλισσε; by the distinction of different forms of the voluntary
into βουλήσεις, βουλευτικι
ς, and προαίρεσις; and by separating
the two spheres of the practical and the speculative reason.
But these various analyses of the mind were thrown out in a
somewhat cursory manner; they were not laid down as the
basis of ethical science, whereas a modern writer, like
Dugald Stewart—whose Philosophy of the Active and Moral
Powers of Man might be taken as the representative of a
large class of modern systems—considers the analysis of the
'active propensities' in men to be the 'only way in which
the light of nature enables us to form any reasonable con-
clusions concerning the ends and destination of our being,
and the purposes for which we were sent into the world.'
Dugald Stewart thus makes it the object of ethics to learn
the designs of God in placing man in the world,—which is
THE MODERN IDEA OF 'CONSCIENCE.'

Considerably different from Aristotle’s enquiry into the τέλος for man (see above, page 222),—and he make the means to this to consist in a psychological classification of man’s powers and propensities. Aristotle only goes so far in the same direction as to say that the chief good for man must be found in the employment of that faculty which is highest in man, but it is hardly by psychology that he arrives at the conclusion that Reason is the highest faculty in us. This is rather a metaphysical datum,—Reason being, according to Aristotle’s general philosophy, ‘the only divine thing in the world.’ For the rest, Aristotle does not obtain his lists of the Virtues from a classification of man’s ‘appetites,’ ‘desires,’ ‘affections,’ and the like; he accepts ready-made the cardinal and subordinate virtues recognised by Greek society. And in the same way he accepts the idea of Friendship, as current in his times, without basing it on any special need or tendency to be found by a partition of the mind.

The most striking ethical term of modern days is the term ‘Conscience.’ This term, which owed its first origin and currency to the thoughts and expressions of the Stoics and St. Paul, naturally assumed a great prominence and importance in the history of the Church, especially owing to the practice of the Confessional. Then arose the conflict of different obligations with regard to the same act, and hence ‘cases of Conscience,’ and ‘Casuistry,’ the science of dealing with such cases. The Jesuits especially applied themselves to this science; they compiled great systems of Casuistry to meet every conceivable question as to moral, or rather religious, obligation, and these systems for the time being usurped the place of ethical science. Aristotle had no one word to express what we mean by ‘Conscience;’ his moral psychology had not advanced so far as this; the idea of the ‘relief of conscience’ by confession, or otherwise, being un-
Greek, would have been alien from his modes of thought. He
describes, indeed, in graphic terms the self-reproach and un-
happiness of a man who has yielded to temptation, and who
'could have wished that those pleasures had not happened to
him' (Eth. ix. iv. 10), but this description is given in simple
and concrete form, and Aristotle does not make an abstraction
of the Conscience. His ἀποφλασ or difficult questions on
different points of morals have sometimes the appearance
of questions in Casuistry (cf. Eth. ix. i.–iii.), but in
reality they stand on the same footing with ἀποφλασ in all
other sciences; they are a mode of testing some general de-
finition by bringing forward apparent exceptions to it; they
are merely an intellectual instrument for obtaining clearness
of conception.

Ethics in the modern world have tended, ever and anon,
more and more to free themselves from Theology. Of late,
not content with the analysis of man’s nature as it is, they
have entered upon the speculative question, How has man’s
moral nature come to be what it is? This is the enquiry of
certain Schools which commence by denying the reality of
any à priori ideas in Morals or in any other subject. This
being assumed, a genesis for each moral idea must be sought
in experience; it must be shown how mankind out of mere
animal instincts of self-preservation and desire for pleasure
slowly built up the ideas of Justice, Purity, Truth, Benevo-
lence, Modesty, the Right, and all kindred notions. Many
of these ideas are, it is true, as old as the history of mankind,
and some philosophers go so far as to assert generally that
moral ideas admit of no advance. The late Mr. Buckle, who
took this view, gladly quotes Sir James Mackintosh as
saying 'Morality admits of no discoveries. . . . More than

three thousand years have elapsed since the composition of
the Pentateuch; and let any man, if he is able, tell me in
what important respect the rule of life has varied since that
distant period. Let the Institutes of Menu be explored with
the same view; we shall arrive at the same conclusion. The
fact is evident that no improvements have been made in
practical morality. The facts which lead to the formation of
moral rules are as accessible, and must be as obvious, to the
simplest barbarian as to the most enlightened philosopher.'
But these remarks involve a great exaggeration; instead of
its being true that 'no improvements have been made in
practical morality,' it is far rather 'evident' that morality
improves and must improve with the growth of knowledge
and other civilisation. To trace, as far as possible, the for-
amation and growth of moral ideas, is a most legitimate
enquiry. And contemporary writers, with the view of
throwing light on this subject, have brought together many
curious facts from the traditions of early society and from
the customs observed to exist among savage peoples who are
still in an infantile condition. Such investigations are an
endeavour to account for the actual 'content' of man's moral
nature, to explain how the otherwise blank formulæ of morality
have come to be filled up in a particular way. It is another,
and still more speculative, endeavour to go on and ask, What
is the genesis of the moral faculties themselves? In answer
to this we have the famous 'Evolution theory' of the present
day, which points to hereditary habits and tendencies in the
nervous and cerebral organisations of animals, and argues
that the moral nature of modern civilised man is but the
complex result of a long series of these hereditary transmis-
sions,—the habit or tendency, so transmitted, having been in
each case the result of some experience of life. And thus, by
going back from the complex present to the simple past, we
arrive at the early ancestry of man's moral nature in the 'Ascidians' of Mr. Darwin, or in some portion of matter possessing the power of contractility. In this speculation ce n'est que le premier pas qui coûte. Man's moral nature has its basis in Reason, and if it can be conceived that Reason has grown out of Matter, without having originally existed in Matter or in relation to Matter, then Mr. Darwin's theory of the genesis of man's moral nature may be received;—it is, in fact, nearly identical with that of Democritus, Epicurus, and Lucretius in old times, though, up to a certain point, better supported than theirs by observations and analogies.

Aristotle's Ethics, and indeed his philosophy in general, are left far in the background by these recent systems. In comparison with all modern scientific accounts of the development of this Earth and of Man, Aristotle's views are of no value. He repudiated the theory of Democritus, and believed in the eternity of the world, the same as a whole, and pretty much the same in its parts, during an infinite past. He admitted a certain progress and development in human societies, and even accepted a strange theory thrown out by Plato (Laws, 677 A.) that the human race had periodically been destroyed by floods, all but a few individuals, who had in each case the task of beginning civilisation anew (see above, page 288). But he considered that the possession of Reason by the individuals who were left, would always insure the fresh perfecting of art and science, for in Reason everything is included. To say that Reason could be developed out of Matter, would have seemed to Aristotle a contradiction in terms. Reason was with him the absolute antithesis to Matter. He thought that in man the Reason was in no way connected with his physical organisation,—that it was 'something of the nature of God, which came into him from
THE RELIGION OF HUMANITY. 383

without. While admitting that Reason in the individual is of the nature of a potentiality ever and anon evoked into actuality, and then again subsiding (see above, page 250), Reason in the Universe was figured by him as ἀνά 

δυνάμεως, as that which never is, nor ever could have been, in abeyance. When all has been said and done by the great physical investigators of the present day, they will still have to settle with Aristotle this metaphysical question: Can Reason be conceived as a mere result growing out of the blind and accidental changes of Matter, or must Reason be regarded as a pre-existing and absolutely necessary condition to the historical development of the material and intellectual world?

There is one other phase of Modern Ethics which may be mentioned in comparison, or rather contrast, with the system of Aristotle, namely, the modes of thinking, now pretty widely spread, which have arisen out of, or have an affinity to, Comte's Religion of Humanity. These modes of thought have a negative side, being founded on atheism, and they have also a constructive side, in so far as they endeavour to supply other considerations which may fill up the vacuum caused by the negation of God and of a future life. The following sentences may serve to give a specimen of the results arrived at:—'All moral action arises from the individual's acting in consonance with the idea of his kind. To realise this, in the first place, and to bring himself as an individual, into abiding concord with the idea and destiny of mankind, is the essence of the duties which man owes to himself. But in the second place, to practically recognise and promote in all other individuals also this permanently enduring kind, is the essence of our duties to others.' Obliga-

9 De Gen. An. ii. iii. 10, quoted above, p. 296, note.
tions of gratitude are specified to the Family, and then to the State: 'From the nation we have received our language and the entire culture connected with language and literature; national habits are also the basis of family life; to the nation we must be ready to consecrate our best energies—if need be, our lives. But we must recognise our own nation to be but one member of the body of humanity, of which we must not wish any other member, any other nation, to be mutilated, or stunted; as humanity can only flourish as a whole in the harmonious development of all her members; as again, her stamp is to be recognised and respected in every single individual, to whatever nation he may belong.' 'Ever remember that thou art human, not merely a natural production; ever remember that all others are human also, and, with all individual differences, the same as thou, having the same needs and claims as thyself; this is the sum and substance of morality.' Then follow duties of man to Nature: 'Man is labouring in his own special vocation, if not one of Nature's creatures appears to him too insignificant for the investigation of its structure and habits, but neither any star too remote to be drawn within the sphere of its observation for the calculation of its motions and its course.' Finally man's duties to the brute creation are indicated. 'He knows that the animal is as much a sentient being as himself.' He will spare the sufferings of animals, in their necessary deaths, as much as possible and render their service as tolerable as possible. 'The manner in which a nation in the aggregate treats animals is one chief measure of its real civilisation.'

All this, and much more of the same kind, if we can forget its negative and atheistical origin, and treat it merely as a system of Ethics entirely divorced from Theology,

---

is in itself sufficiently noble. It inculcates the principles of self-sacrifice, love of one's neighbour, persistent effort for the good of society, striving after knowledge of all kinds, tenderness to all, even to the dumb animals. The Comtist morality, to a somewhat striking extent, resembles Buddhism, which also seems to have consisted in the union of positivist views regarding God, with a tender sympathy for mankind and the animals. But the resemblance is accidental, as there is no trace of Comte having copied the doctrines of Buddha. On the other hand, the best features of the Comtist morality cannot claim to be original. What is there in the doctrine of our duties to 'humanity,' which cannot be found first in Stoicism, and afterwards, in a simpler and sweeter form, in Christianity itself? Aristotle's *Ethics* therefore exhibit the same contrast to the morality of Comte as they do to that of Stoicism or of the Gospel. *First,* in the Grecian narrowness of their view, since the idea of the brotherhood of mankind had not dawned on Aristotle; to him Greek and Barbarian, Bond and Free, were in perpetual antithesis. *Secondly,* in their upholding the institution of Slavery as a matter of theory. Practically, indeed, Stoicism only served to mitigate, without abolishing, Slavery. And Christianity had existed for more than eighteen centuries in the world before any serious effort was made to abolish the Slavery of inferior races. But this was only a failure of carrying out the spirit and principles of Stoicism and Christianity. On the other hand, Aristotle supported the institution of Slavery in deliberate theory. Some thinkers of his age had considered slavery to be a mere institution of custom (νόμος), and unjust and unnatural, because based on no difference of nature between the master and the slave. But Aristotle maintained on the contrary

11 *Politics,* i. iii. 4.
that part of mankind are by nature slaves, being only fitted to be under control, not having a law of reason (λόγον) in themselves, and only sharing in it, so far as to be able to understand it when enunciated. And hence he deduced the detestable doctrine that it is justifiable to make war for the purpose of reducing to slavery those who, having been by nature intended to be a subject, refuse to be so. Domestic slavery in Athens was probably mild, and the lot of an Athenian slave may have been far better than that of many a free labourer in modern times. But the question is one of theory:—Aristotle plainly denied the rights of humanity to a slave. He said, ‘you cannot conceive a slave sharing in Happiness, any more than in a career in the State’ (Eth. x. vi. 8).

Perhaps enough has been said to indicate the differences of point of view, which separate Aristotle from all modern systems. One difference is that between the Hellenic and the Semitic spirit; between a simple, joyous, and artistic theory of life, which points out how the Beautiful is attainable in action, and a Happiness ‘more than mortal’ in philosophic contemplation,—and a mode of thought which removes Happiness to a region beyond the grave, makes this life a mere means to the attainment of a better life hereafter, and, so far as this world goes, raises Self-abnegation and Pain into objects to be chosen for their own sakes. Again, all the differences have to be taken into account which divide a system only contemplating a small Greek republic, and reflecting many of its peculiarities, from the wider views and changed circumstances of the modern world. The progress of Psychology and its abstractions, deepened by religion and religious morality, is another

12 Pol. i. v. 9.  
13 Pol. i. viii. 12.
matter in which Aristotle is left behind. The conception of the development of the Earth and of Man to which Palaeontology and other sciences have given rise, is of purely modern origin, and influences to some extent even the theory of Morals. Lastly, the bold materialism of the last few years offers conclusions utterly irreconcilable with the philosophy of Aristotle.

Many of Aristotle’s peculiar terms and phrases still live in ethical phraseology, having been perpetuated in modern language by the schoolmen. But they have for the most part lost their original philosophic import, and are used to express ideas quite out of the Aristotelian context. ‘Habits’ is no doubt only the Latinised form of ἑκες, but the meaning which attached to ἑκες does not remain pure in ‘habit,’ which, as it is generally used, rather implies ἔθος, i.e. that process by which a ἑκες is formed. The ‘passions’ with us, though a translation of πάθη, do not quite correspond with them, they more nearly answer to the ἐπιθυμίαι of Aristotle. ‘Motive’ is properly the ‘efficient cause’ (ὅθεν ἡ κίνησις), but applying it to action we use it invariably for the ‘final cause’ (οὔ ἐνεκα) which was Aristotle’s term for the motive of an action. ‘Principle,’ as above mentioned (p. 269), corresponds with the ἀρχή of the practical syllogism, but according to the Peripatetic system this major premiss contained an idea of the good, while our ‘principle’ is meant to imply an idea of the right. ‘Energy,’ though identical in form with ἐνέργεια, has quite lost all notion of a contrast and correlation with δύναμις or potentiality, and implies merely the existence of physical or moral force. In saying ‘extremes meet,’ we forget the philosophical antithesis between the extremes and the mean, and all which that ‘mean’ originally implied. In translating Aristotle’s ἥθική ἁρετί by the terms ‘moral virtue’ we omit to notice how
much all these associations connected with the individual will, which go to make up our conception of 'moral,' were wanting in Aristotle's θυσία ἀρετή, while this, strictly speaking, might perhaps be better represented by the words 'excellence of the character;' and, as has been already made apparent, in speaking of 'the end of man,' we substitute a religious for a philosophical association. The above-mentioned terms, however, have all a direct affinity to, and a lineal descent from, the system of Aristotle. They have only suffered that degree of change to which all language is liable, and which so many ancient words have undergone in their transition to modern use. Modern terms of this derivative character present, for the most part, two characteristics, as contrasted with their antique originals. In the first place, they are more definite. In the second place, they are less philosophic. The philosophy, however, that once surrounded them and formed their proper context, in ebbing away from them has really sunk into the general thought of the world and become absorbed in it. If 'energy' no longer represents ἀρετή, 'actuality' and many other forms of thought contain and reproduce all that was philosophical in the original word. If 'habit' is not exactly ἡκτις, the 'law of habits' is a received doctrine in all practical Ethics. And so in a variety of ways Aristotle has influenced modern forms of expression.

But in the matter of morals the world has clearly outgrown the Ethics of Aristotle. And so, in a utilitarian age, the question may be raised, Why, then, should this treatise be any longer studied? To this, perhaps, dozens of answers might be offered, but we may content ourselves with a few. It might suffice to say in the words of a recent writer, 'nothing which has ever interested living men and women can wholly lose its vitality—no language they have spoken,
no oracle by which they have hushed their voices, no dream which has once been entertained by actual human minds, nothing about which they have ever been passionate, or expended time and zeal. But, if this answer be deemed inadequate by the utilitarian, then let him believe that the study of Aristotle is an essential part of high cultivation. If cultivation consists primarily in an acquaintance with the thoughts and words of the greatest writers of the world, Aristotle undoubtedly is one of those greatest writers. Again, cultivation consists in a knowledge of the past, for without this knowledge we cannot understand the present. And, in tracing the progress of the thought of Europe a knowledge of Aristotle is an essential ingredient. As a training for youthful minds the Ethics, Politics, Rhetoric, and Art of Poetry of Aristotle are found by experience to have a peculiar value. The rich knowledge of life and human nature (the same in all ages) which they contain, their method of exhaustive classification, and their manly handling of all questions which arise, render these works a suitable prædæutik for many careers in life. And the late Dr. Arnold of Rugby used to set especial store on these studies as a main part of the curriculum of the University of Oxford. But again, if, apart from general education, a man would wish to form himself to be a philosopher, he can hardly dispense with a knowledge of the ancient systems, of which Aristotle is the culmination,—the want of this knowledge is a deficiency and the source of a certain weakness in some of the most eminent English philosophers of the present day. Finally, it may certainly be good for us all, as a supplement to, and sometimes as a corrective of, our ordinary modes of thought, to imbibe a

---

portion of the Hellenic spirit and to endeavour to infuse it into our daily life. And there are three great ideas, all too much neglected by the modern world, which we may learn from the *Ethics* of Aristotle to restore to their proper importance; and these are—the Beauty attainable in action, the high pleasure attainable in Philosophy, and the value and grandeur of a noble Friendship.
APPENDIX A.

On the Ethical Method of Aristotle.

Some notice of Aristotle's Ethical method seems necessary for completeness;—it is a subject too long for a note and too short for an Essay, and may be briefly despatched here. Incidentally we have already alluded to several characteristics of his point of view. And in the last resort a philosopher's method, whatever be the subject or science, depends on the whole bearing of his mind and thought. With regard to Ethics, we may first observe, that while Aristotle seems to occupy himself much with the logic of the science, and the question, What is its appropriate method? he is quite tentative and uncertain, and to some extent confused, in all he directly answers to this question. In the second place, we may notice that his method unconsciously declares itself, not in the abstract but in the concrete, throughout the pages of his treatise.

At the very outset of his work, in the first seven chapters, he has no less than three digressions on the logic of Ethics. In the first (Eth. i. iii. 1–4), he cautions his readers against expecting too much ἄξιόνωσι in the present science. This term ἄξιόνωσι (see the notes on Eth. i. vii. 18) seems to imply both mathematical exactness, and also metaphysical subtlety. The Ethical treatise of Spinoza might be said to
exhibit ἀκριβεία in both senses of the word, on account of its demonstrative statement, combined with its metaphysical character of thought. Kant’s system, without aiming at a mathematical method, might be called ἀκριβία, on account of its speculative depth of view. The question then is, of how much ἀκριβεία is this ‘branch of Politics’ (πολιτική τις) capable? Aristotle tells us, that ‘the matters of which it treats—virtue and justice—have so much about them that is fluctuating and uncertain, as even to have given rise to the opinion that they are only conventional distinctions. Hence, with such conceptions on which to reason, we cannot expect demonstrative and exact conclusions, we must be content with rough and general theories.’ It is to be observed here, that Aristotle departs from the point of view with which he had started. He started with an à priori conception of the End-in-itself, which ‘must be identical with the chief good for man.’ Here he goes off into another point of view—that which looks at action from the outside, recognises the variations in the details of action, and allows the empirical casuistry of the Sophists to have an influence in determining the character of his science.

In his second digression upon this topic (Eth. i. iv. 5) he shows even more plainly a tentative and uncertain attitude. He says, ‘We must not forget the distinction drawn by Plato between the two methods of science—the method which proceeds from principles, and that which proceeds to principles. The question is, Which must we adopt at present? We must begin, at all events, with things known. But again, things are known in two ways, absolutely and relatively. Perhaps we—i.e. as ethical philosophers—may be content to begin with what we know (i.e., relative and not absolute truths). Hence the necessity of a good moral training previous to the study of this science. For one who has been so trained is
possession of facts which either already do, or soon can, stand in the light of principles.' In this passage there appears to be more than one play upon words:—(1) In saying, 'perhaps then we must begin with what we know,' there is a sort of implication that the method of Ethics must be inductive, starting from relative and individual facts. But there is a fallacy in such an insinuation, because, though the individual must begin with what 'he knows,' there is nothing to prevent an absolute truth (τὸ ἀπλῶς γνώριμον) forming part of the intuitions and experience of the individual. (2) There appears to be a play on the word ἄρχη: for while Aristotle implies that the procedure must be to principles, and not starting from them, he says, on the other hand, that 'the fact is a principle.' Now, this may mean two things. It may mean that 'a moral fact or perception really amounts to a law.' But, in this case, the science of Ethics, beginning with moral facts, really begins ἄρχον. Or it may mean that 'the fact is a beginning or starting-point for discussion.' In this latter case the word ἄρχη should not have been used, as it introduces confusion into the present passage—the upshot of which, on the whole, seems to be, to assert in a very wavering way that Ethics must be inductive rather than deductive, and must commence with experience of particulars rather than with the intuitions of the universal.

The third digression on the same subject occurs Eth. i. vii. 17–21, where Aristotle points out his definition of the chief good as 'a sketch to be filled up;' and also, it would appear, as an ἄρχη or leading principle, which in importance amounts to 'more than half the whole' science. In filling up the sketch, he again cautions us that too much ἄρχισεια is not to be expected. But it deserted his former view of the sci:
a general conception of the chief good, which is to be applied and developed.

Elsewhere in the *Ethics* Aristotle appears puzzled how to deal with the casuistry of his subject. He says (*Eth. ii. ii. 3–4*) that 'the actions and the interests of men exhibit no fixed rule, any more than the conditions of health do; and if this is the case with the universal theory, still more is the theory of particular acts incapable of being exactly fixed, for it falls under the domain of no art or regimen, but the actors themselves must always watch what suits the occasion, as is the way with the physician's and the pilot's art. And yet, though the theory is of such a kind, we must do what we can to help it out.' He reverts to the same point of view, *Eth. ix. ii. 6*, mentioning some casuistical difficulties, and saying it is impossible to give a fixed rule on such points.

Much as Aristotle speaks of the logic of science, we find, when we come to examine his real procedure, how little he is influenced by his own abstract rules of method. It has been sometimes said that his *Ethics* exhibit a perfect specimen of the analytic method. But this is not the entire case. The discussions are very frequently of an analytic character, different parts and elements of human life are treated separately, and indeed are not sufficiently considered in their mutual relationship. And in subordinate questions the strength of his analytic investigation is manifest. Take, for instance, his treatment of Friendship,—by analysing τὸ φιλανθρωπία into the good, the pleasant, and the useful, he at once obtains an insight into the whole subject. But the leading principles of his ethical science are not obtained by this sort of analysis, there is not by any means a procedure ἐπὶ ἀρχαῖα. Aristotle's bias of mind was only on one side analytical, he was on the other side speculative and synthetical, and viewed all the world as reduced to unity under certain
forms of thought, and, as we have said before, every philosopher's modes and forms of thought, his genius, his breadth of view, and his power of penetration, will constitute in reality his logic of science and his method of discovery.

Aristotle's Ethical system, as we saw more in detail in Essay IV., depends on certain à priori conceptions, end, form, and actuality. We are enabled to some extent to trace how these conceptions grew up out of Platonism, but in their ultimate depth and force they must be regarded as lightning-flashes from the genius of Aristotle. These ideas, by which human life is explained, are no mere results of an induction, no last development of experience, rather they come in from above, and for the first time give some meaning to experience. Aristotle shows how his definition of the chief good includes all the previous notices of the requisitions for happiness. But his definition is not derived from combining these, nor yet from any analysis of happiness in the concrete, but from an inner intuition of a law of good as manifested in life. The same procedure manifests itself throughout. Whatever use Aristotle may make of his à propos, of appeals to language and experience, of the authority of the many and the few, these are only means of testing, correcting, illustrating, and amplifying his conceptions, and not the source from whence they spring. However, the maintenance of this constant reconciliation with experience and with popular points of view is characteristic of Aristotle's method. That it gives rise at times to an empirical and unphilosophical mode of writing, we have had more than once an opportunity of observing. But it is Aristotle's strength as well as his weakness. His width of mind, which is as distinguished as its profundity, enabled him to sum up all the knowledge of ancient times, as well as all its philosophy. Bacon accuses him of being 'a dogmatic,' and of
resembling the Ottoman princes who killed all their brethren before they could reign themselves. This accusation is an exaggerated and somewhat invidious way of stating the real case. Aristotle is 'a dogmatic,' inasmuch as his philosophy is ἔνθρονική or πειρατική, conclusive, and not merely starting the questions; and in the same sense almost every philosopher, who writes, is 'dogmatic,' for he would not write at all, unless he thought that he had got a better system than any before him. Aristotle shows the relationship of all previous philosophies and contemporary opinions to his own system, by which he does not so much 'kill his brethren' as demonstrate that they are evidently 'younger brethren,' leaving his own right to the throne indefeasible. His relations, indeed, to Plato, in this respect are not entirely satisfactory; he never seems conscious of the enormity of his debt to Plato, and how much all the matter of his philosophy, as distinguished from a more precise and scientific mode of statement, had been suggested to him by the works of Plato. But if in the term 'dogmatist' arrogance or assumption is implied, this would not be true either of Aristotle's style of writing, or tone of thought. And he is by no means dogmatic on all points; on some, as we have already seen (in Essay V.), he declines to decide.
APPENDIX B.

On the Ἐξωτερικοὶ λόγοι.

In six places of the undoubted writings of Aristotle, and in three passages of the Ethics of Eudemus, reference is made to 'Exoteric discourses,' or 'arguments' (Ἑξωτερικοὶ λόγοι). Ever since the revival of letters this phrase has attracted a wonderful amount of notice, and a whole literature of works has been composed in support of the different meanings which have been attributed to it. This literature begins perhaps with Octavianus Ferrarius (1575), and, after receiving contributions from all the great modern authorities on Greek philosophy, it ends with the names of Bernays, Spengel, and Grote. We must endeavour now to give some results of this controversy, in which, however, no important question has ever been involved;—except so far as everything connected with Aristotle, and his mode of writing, is interesting and important.

Before the period when the Aristotelian MSS. were brought to Rome and edited by Andronicus, we know that

---

2 Die Dialoge des Aristoteles in Ihrem Verhältniss zu seinen übrigen Werken (Berlin, 1863).
3 Aristotelische Studien, i. p. 13 (München, 1864).
manyDialogues, ascribed to Aristotle as their author, had been spread over the world and much read and admired, even to the exclusion\(^5\) apparently of any knowledge of the more important treatises which we look upon as the works of Aristotle. When these latter works had been brought to light, they were contrasted by the ancients with the lighter works in dialogic form which had before been known. And thus Cicero tells us, probably on information received by him from the learned Tyrannion (*De Finibus*, v. 5, 12), that ‘On the *sumnum bonum* (Aristotle and Theophrastus) had two classes of books, one in popular style, which they called “exoteric,” the other written in a more exact manner, which they left behind in their commentaries (or notebooks),’ and that this difference in the style of treatment gave rise to an appearance of inconsistency of view, which, however, was not real.\(^6\) This, then, was the state of things in the time of Cicero—that the Dialogues attributed to Aristotle were considered genuine, and spoken of as ‘exoteric’ writings. The Greek Commentators treated them in the same way, but there is no evidence that these dialogues were identified by the ancients with those particular references, in which Aristotle appeals to the ‘exoteric discourses.’

The writers of the later empire, who were accustomed to the idea of mystical and hierophantic teachings, as professed by the neo-Platonic and neo-Pythagorean sects, got hold of this word ‘exoteric,’ and out of it created the fable that Aristotle had a double doctrine, the one form of it ‘esoteric,’

---

\(^5\) See above, page 8.

\(^6\) 'De summo autem bono quia duo genera librorum sunt, unum populaverit spiritum, quod ξάρησιν apellabant, alterum liniatius, quod in commentariis reliquerunt, non semper idem dicere videntur, nee in summâ tamen ipsâ aut varietas est uilla apud hos quidem, quos nominavi, aut inter ipsos dissensiones.'
secret, and confined to an intimate circle of initiated scholars, the other 'exoteric,' containing only superficial truth with which the profane vulgar might be put off and satisfied. In accordance with this notion, Aulus Gellius (xx. 4) gives the apocryphal story that Alexander the Great, having heard that the Acroatic (i.e. abstruse and intimate) discourses had been published, wrote from the East to complain of what had been done, 'since he should now have no superiority over the common herd,' and that Aristotle replied that 'the treatises, though published, were not published, for nobody would understand them.' Such a statement does not require refutation. After the Renaissance, when the works of Aristotle in their original form were widely studied, all the nonsense about his double doctrine was at once dissipated; and the simple, plain-sailing character of his philosophy was admitted on all hands. The only question then which remained, was, whether on the few occasions when Aristotle mentions 'exoteric discourses,' he means to refer to his own more popular writings, or to something else. About the meaning of the term 'exoteric' itself, as used by Aristotle, there is no divergence of opinion. 'Exoteric' is not to be taken as opposed to 'esoteric' or secret, but the ἐξωτερικὸς λόγος is the external, non-philosophical, non-scientific treatment of a subject, opposed to the ὀικεῖος λόγος, or internal, appropriate, and scientific treatment of it. Such being the case, whenever Aristotle says, 'Enough is said on such or such a point, even in the exoteric discourses,' the only doubt is whether he means to refer to those works of his own in which he had treated of philosophical questions after a not strictly scientific method, or to the ordinary debates and discussions on such subjects, rifé enough in Athenian society, but of course unscientifically conducted. The latter is the
Physical Discourse of Aristotle, which actually gives specimens of them. The question is as to the nature of Time, on which Aristotle says καλὸς ἐχει διαπορήσας περὶ αὐτοῦ καλὸς τῶν ἐξωτερικῶν λόγων πότερον τῶν ὄντων ἡ τῶν μὴ ὄντων, ζίτα τίς ἡ φύσις αὐτοῦ, and then follows a string of these ‘exoteric arguments,’ which are dialectical reasons for doubting whether Time can be said to exist, and dialectical difficulties as to its attributes. There seems no reason for holding, with Bernays, that such arguments were too abstruse for discussion in educated society, outside the philosophic schools, in Athens. The whole of the Topics of Aristotle, not to mention the Dialogues of Plato (which are obviously meant to have a dramatic truth), are against Bernays upon this point. And, at all events, it is impossible that Aristotle by the term ἐξωτερικοὶ λόγοι, in the passage now quoted, can have been referring to his own Dialogues.

Again, in the Ethics of Eudemus (1. viii. 4) we find it said of Plato’s doctrine of Ideas, that the subject belongs to another department, and is too subtle for discussion in an ethical treatise; that the writer (if he must briefly indicate his opinion) considers the Ideas to be vain abstractions; and that ‘the question has already received manifold consideration both in exoteric and in philosophical discussions.’

Here there is evidently no reference to the Dialogues of Aristotle. Eudemus is only mentioning, as Aristotle so often did, two classes of opinions and arguments on any subject,—
the popular and the philosophical. A few pages later in the same work (Eth. Eud. II. i. 1), we find the old and common division of goods, into 'external goods and goods in a soul,' mentioned in the following terms, Πάντα δὴ τὸ γαθὰ ἡ ἐκ τῶν ἢ ἐν ψυχῇ, καὶ τούτων αἰρετῶτερα τὰ ἐν τῇ ψυχῇ, καθάπερ διαμορφώμεθα καὶ ἐν τοῖς ἐξωτερικοῖς λόγοις· φρόνησις γὰρ καὶ ἀρετὴ καὶ ἱδρον ἐν ψυχῇ, δὴ ἐναι ἡ πάντα τέλος εἰναι δοξὴ πᾶσιν. Eudemus says that we make this distinction 'even when speaking popularly,' 'for all men consider either thought, virtue, or pleasure, to be an end-in-itself.' Thus the opinions 11 of 'all men' are identified with the ἐξωτερικοὶ λόγοι.

In the fifth book of his treatise (Eth. Nic. vi. iv. 2) Eudemus makes a similar appeal to the distinctions established, apart from philosophy, in popular opinion and language, ἀποτελοῦν δὲ ἡ στὶ πολίσις καὶ πράξεις· πιστεύομεν δὲ καὶ τοῖς ἐξωτερικοῖς λόγοις. Bernays, however, considers that the distinction of πολίσις from πράξεις was too fundamental a doctrine in the Aristotelian system to be merely taken for granted, or accepted as having been established by the discussions of cultivated society. He therefore conjecturally infers that Aristotle must here be citing the conclusions arrived at in his own dialogue Περὶ Ποιητῶν, though none of the fragments of that dialogue, now existing, in the least bear out this supposition. On the other hand, it must be remembered (1) that in all probability Eudemus, and not Aristotle, wrote this passage, (2) that Plato (in Charmides, p. 163) describes an 'exoteric argument' between

11 Aristotle himself (Eth. i. viii. 2) mentions the distinction here referred to, as one of the λεγόμενα on the subject of Happiness. He says that it is an old opinion, which has received the approval of philosophers.
Critias and Socrates on the difference between ἡσύς and ἔρξις. The distinction there given is imperfect, and is meant as a caricature of the manner of Prodicus (see above, p. 124), but still it shows that the question itself had been mooted at a comparatively early period in Athenian talk. And there is no reason for doubting that in the century (or thereabouts) which intervened between Prodicus and Eudemus, the cleverness of the Sophists, and of the society in which they moved, should have sufficed to settle so simple a matter as the difference between 'making' and 'acting.'

Returning now to the undoubted works of Aristotle, we find in *Metaphys. xii. i. 4,* the sentence Συνεπάν πρώτον μὲν περὶ τῶν μαθηματικῶν,—ἐπειτὰ μετὰ ταῖτα χωρὶς περὶ τῶν ἰδεῶν ἀπλῶς καὶ δουλονόμου χάριν· τοῖς ράλληται γάρ τὰ πολλὰ καὶ ἐπὶ τῶν ἐξωτερικῶν λόγων—' We have first to consider mathematical substances (their nature, &c.), and afterwards we must enter into a separate consideration of the Ideas, looking at them by themselves, and only so far as courtesy demands (δουλονόμου χάριν), for most points regarding them have been made common property even by the exoteric discussions upon them.' The first thing that strikes us in this passage is the parallel which it presents to the Eudemian saying (*Eth. Eud. i. viii. 4*), that 'the doctrine of Ideas had already received manifold consideration both in popular and in philosophical reasonings.' It is possible, indeed, that Aristotle may in this place of the *Metaphysics* be referring to those dialogues of his own in which, according to ancient authority (see above, page 212, note), he was 'always declaring his inability to sympathise with the doctrine of Ideas.' But if he does so, he does it by implication, not mentioning his own dialogues, but merely referring to the general class of 'exoteric discussions,' in which his own dialogues would be included. On the other hand, it is easy
to believe that Aristotle’s early dissent from Plato’s doctrine of Ideas gave rise to much talk in the intellectual circles of Athens, and it is more consonant with the expressions used that Aristotle is merely alluding to the results of that talk.

The next passage to be examined is Politics, τ. vi. 5, Ἀλλὰ μὴν καὶ τῆς ἄρχης τοὺς λεγομένους τρόπους ὑβδίου διελεύν καὶ γὰρ ἐν τοῖς ἐξωτερικοῖς λόγοις διοριζόμεθα περὶ αὐτῶν πολλάκις—‘It is easy to classify the so-called forms of government, for even in unscientific discussion we often draw distinctions about them.’ Here we have the same formula as in the Eudemonian remark about the common division of goods (καθάπερ διοριζόμεθα καὶ ἐν τοῖς ἐξωτερικοῖς λόγοις). The very term λεγομένου points to matter of widely-spread, ordinary, cognisance. Bernays, however, rejecting this simple explanation, conjectures a reference to the four dialogues, mentioned in the catalogue of Aristotle’s writings, Πολιτικός, Περὶ Βασιλείας, Περὶ Αποικίων, Περὶ Δικαιοσύνης, which all may have discoursed on the forms of government. And this, he says, would justify the adverb πολλάκις. It would not, however, justify the present tense διοριζόμεθα, which, if taken as Bernays suggests, would imply that Aristotle, when he wrote his Politics, was still going on with dialogues and exoteric discourses. And this it is impossible to believe. If Aristotle ever wrote dialogues, he wrote them in his youth, and had left them far behind him, both in thought and manner, when he came to compose his systematic philosophy.

In Politics, τ. i. 2, it is said, Διό δὲ πρῶτον ὁμολογεῖσθαι τῆς ὅ πᾶσιν ὅσι εἰπεῖν αἵρετῶτατος βίου· μετὰ δὲ τούτο, πότερον κοινῷ καὶ χωρὶς ὃ αὐτῶς ἡ ἡτέρος. Νομισάντας ὅν λεκανὸς πολλὰ λέγεσθαι καὶ τῶν ἐν τοῖς ἐξωτερικοῖς λόγοις περὶ τῆς ἀρίστης ζωῆς καὶ νῦν χρηστέων αὐτῶι—‘Considering, then, that many of the statements made on the subject of the Best Life even
in not strictly philosophical discourses are adequate, we must even now make use of them.' The expressions used in this passage are different from those in any of the passages previously reviewed. The phrase, 'we must even now make use of them,' is very striking. It looks as if Aristotle, for once and away, was condescending to avail himself of a portion of one of his earlier writings. And this supposition is borne out by the strange appearance of what follows. Bernays is quite right in remarking that 'one who has been long accustomed to the severe atmosphere of Aristotle's ordinary style, finds himself greeted by a breath of unwonted mildness' in the paragraphs which immediately succeed that now quoted. A fulness and even redundancy of expression, very unlike the usual crabbed brevity of Aristotle, now shows itself. The sentences are harmoniously rounded. A hortatory and somewhat fervent tone is observable. The whole passage, down to the end of the chapter, looks like the peroration of a dialogue, on a level—say with the Menexenus. The concluding words, which would have been suitable to such a peroration, look out of place in their present position in the Politics. We are willing, then, to concede to Bernays, that in the first chapter of the seventh book of the Politics we have not only a reference to, but an actual excerpt from, one of the

12 The following quotations may illustrate the style of this passage:—
Οδήσις γὰρ ἢ τὰς ἐν ψυχῇ μακάριον τῶν μηθέν μόριν ἐχοντα ἀδρίας μηθῆς σωφροσύνης μηθῆς δικαιοσύνης μηθῆς φοβοσύνης, ἀλλὰ δεδοτα μὲν τὰς παραπτωμάτων μινας, ἀπεχόμενον δὲ μιθεός, ἢ ἐπιθυμήρα τοῦ φαγεῖν ἢ πιέων, τῶν ἐσχάτων, ἢνκα δὲ τεταρτημόρον διαφθόρων τὸν ψυχέως φίλου, ὑμνίως δὲ καὶ τὰ περὶ τῆς διάνοιας ὀντὸς ὄρφανα καὶ διεφθορμέον ὄπερ τὸ παιδίον ἢ μακρύμενον.—"Οτι μὲν οὖν ἐκδησι Ἡς κεδαμοσεια ἐπιβάλλει τοσοῦτον δοσιν περὶ ἀρετῆς καὶ φοβοσύνης καὶ τοῦ πράττειν κατὰ ταύτας, ἔστω συνωμολογημένον ἡμῖν, μάρτυρι τῷ θεῷ χρησίμους, αὐτοῖς εὐδαιμονιοι μὲν ἀκαὶ κακάριοι, δὲν οὖδὲν δὲ τῶς εξωτερικών ἁγαθῶν, ἀλλὰ δὲ αὐτὸν αὐδῆς καὶ τῷ ποιῶς τις ἐκιντήθην φόβων.—Πρὸς δὲ τοῖς ἀμφισβητούμεναι, ἐδίδοται ἐπὶ τῆς τοῦ μεθίδος, διασκεπτόντων βοστρον, εἰ τοὺς εἰρημένους τεγχάνει μὴ πείθομεν.
"exoteric discourses" of Aristotle. Bernays does not pronounce with certainty to which of the dialogues this passage originally belonged; he thinks it may have come either from a moral dialogue, called in the catalogue Νήμων, but which may perhaps be identified with that mentioned elsewhere under the name Κορίδιος, or from the Προτρεπτικός, or 'Exhortation to Philosophy.'

The last passage to be noticed is Eth. i. xiii. 9, where, in speaking of the soul, Aristotle says, Λέγεται δὲ περὶ αὐτῆς καὶ ἐν τοῖς ἐξωτερικοῖς λόγοις ἀρκούντων ἕνα καὶ χρηστέον αὑτοῖς· οἷον τὸ μὲν ἄλογον αὐτῆς εἶναι, τὸ δὲ λόγον ἔχει· But some points about the soul seem to be sufficiently stated even in the unscientific discussions of the subject, and we must avail ourselves of them;—as, for instance, that part of it is irrational and part rational. The terms used here are nearly the same as those in the last-quoted passage, only with the important omission of καὶ νῦν before χρηστέον. Bernays finds here a reference to the dialogue of Aristotle called Eudemus (on which see above, page 300). But there is no appearance of any writing here likely to have come from such a work. And after the publication of Plato's Republic, there seems no reason to think it impossible that a society which gave rise to the Topics of Aristotle (see above, page 131), should have arrived at the dichotomy of the soul into rational and irrational, as one of the results of its discussions. And of this rough basis of psychology Aristotle here seems to avail himself.

The conclusions, then, to which we venture to come with regard to the ἐξωτερικὸς λόγος, are as follows:—

(1.) That Aristotle always uses the phrase generically,
in a sense capable of including both his own not strictly scientific writings, and also the informal and dialectical discussions of other men.

(2.) That in different places he makes a different specific application of this generic term.

(3.) That in Phys. iv. x. 1, he uses it in reference to dialectical difficulties and questions, as to the nature of time, in vogue at Athens.

(4.) That in Metaphys. xii. i. 4; Pol. iii. vi. 5; and Eth. i. xiii. 9, he indicates by it the results arrived at by the extra-scholastic discussions and theories of the day.

(5.) That in Pol. vii. i. 2, he uses it in especial reference to one of his own earlier works, and actually proceeds to incorporate an extract from that work with his Political treatise.

(6.) That Eudemus, in the three places where he employs the phrase, means by it ‘popular,’ as opposed to ‘philosophical’ discussion.

The available fragments of the lost Dialogues of Aristotle have been collected by Valentine Rose, and are now prefixed to the splendid Index to Aristotle which forms the conclusion to the great Berlin Edition. The question of the genuineness of these fragments cannot here be thoroughly attempted. We cannot go with Valentine Rose the entire length of believing that Aristotle never wrote anything of the kind. Indeed, the passage in Pol. vii. i. 2 would be sufficient to prevent our holding such an opinion. There often occur fanciful and ornamental phrases in the works of Aristotle, which he may have ‘availed himself of’ from his earlier writings. Such, for instance, are:—μία γὰρ χειλεδών ἐστὶν ὁ πρῶτος (Eth. i. vii. 16), διὰ τὸ πολλοῦ τῶν ἐν ταῖς θεωρίαις ὑμοιοπαθεῖν Σαρδαναπάλαρ (Ib. i. v. 3), and οὕτω ἐπερεύθη οὐθ’ ἐνος οὐτω

\(\theta\alphaυμαστός\) (adopted by Eudemus, Eth. v. i. 15). These and many more such ‘purple patches’ may have originally appeared in the more youthful works of Aristotle. But that a considerable element of forgery contributed to the making up of the long catalogue of Aristotle’s writings, we can hardly doubt.
APPENDIX C.

On the Political Ideas in the Ethics of Aristotle.

It may seem a strange omission that, while we have so often alluded to Aristotle's identification or confusion of Ethics with Politics, we have never specified any very important consequences of this view; except, indeed, that we have noticed sometimes a restricted mode of dealing with certain questions, more appropriate to Politics than to philosophy. It remains then to ask, were there any such consequences? Does Aristotle write on Ethics differently because he considered that his science was a kind of Politics? Is the individual in his eyes always regarded as a citizen? Do his views of law, the state, and different questions of the constitution influence his views upon moral action? Every one will be ready to answer that such effects are hardly traceable. We read the Ethics as containing discussions on happiness, virtue, friendship, pleasure, and philosophy; we find it replete with anthropology, dealing with the heights and the depths of the human consciousness, and quite away from any consideration of the welfare of masses of mankind. Happiness, as here described, does not depend on any particular constitution or form of government. Aristotle, indeed, specifies the various forms of government, and declares which is the best among them (Eth. viii. x.), but this is only for the purpose of illustration, for the sake of comparing the dif-
by the state. Hence,' he says, 'the nurture and the discipline should be fixed by law, and use will make them easy. Not only, perhaps, ought men while youths to receive good discipline, but also we want laws about their conduct when they are grown up; and, in short, about the whole of life. For the many will rather obey necessity than reason, punishment than the inducements of the beautiful.'

With these evidences before us, let us now sum up the bearing of Aristotle's political thought upon what we now call the *Ethics*. There seems to be an analogy between Aristotle's views of man in relation to the state, and his views of man in relation to nature. We have seen before (Essay V.) that in his *Physics* he considers man as part of nature, and, because he is a part, inferior to and less divine than the heaven and the universe; so, too, in his political system, he considers the state prior to and greater than the individual (*Politics*, i. ii. 13), just as the whole is prior to and greater than the part. The individual without the state has no meaning; the state must be presupposed; man is not a whole in himself (*αὐτάρκης*), he is born to live in relationship to others (*πολεμικός*), if he lived alone he must be either more or less than man (*ἡ ὑπάρχου ἡ θεός*). Just as Aristotle said 'the universe is diviner than man,' so he says 'the End for the state is diviner than that for the individual.' Politics, then, are the greatest science, the legislator is an *ἄρχητέκτων*, a master builder laying the plan of that greatest practical thing, a fitly framed human society. This idea, if it were carried out, would tend to overwhelm all individuality. It actually does so in Plato's *Republic*, and the last-quoted passage (*Eth. x. ix. 8*) is a reproduction of the same feeling as Plato's. The laws are to regulate the whole of life, and to force a good discipline on those who would not choose virtue for its own sake. This
idea, then, forms one side of Aristotle's view, it is a sort of background to his ethical system. The End for the state, as he depicts it (see above, p. 227), is something almost mystical, it is like the identification of state and church. But the other side of his view is that which seems forced on him by the truth, as soon as he commences a course of ethical enquiries. It consists in an acknowledgment, to the full, of the absolute worth of the individual consciousness. Not only is a reaction thus made against the system of Plato, but also, by the whole treatment which Aristotle gives his subject, Ethics are virtually and for ever separated from Politics.
THE NICOMACHEAN ETHICS

BOOKS I.—II.
PLAN OF BOOK I.

THIS Book may be roughly divided into the following four parts:

(1.) The statement of the leading question of political science; namely, What is the Practical Good? Ch. I.—VI.

(2.) The answer to this question as given by Aristotle himself. Ch. VII.

(3.) A comparison of Aristotle's definition of the Good with existing opinions on the subject. Ch. VIII.—XII.

(4.) A commencement of the analysis of the different elements which constitute his definition. Ch. XIII.

With respect to these divisions, we may remark that they are not with entire precision separated from one another. For the first part professes to examine the most important opinions on the subject of Happiness or the Good (Ch. IV. § 4), and accordingly reviews men's conceptions of it as exhibited in their lives (Ch. V.), and refutes Plato's theory that the Good is a transcendent Idea, on the ground of its being both metaphysically untenable and practically inapplicable.

After developing his own conception, Aristotle returns (in Ch. VIII., sqq.) to compare it with ἡ λέγομεν—'that goods of the mind are highest'; 'that happiness consists in virtue,' &c. Now we may ask, Why did not a statement of these theories open the Book? Both in Part 1st and Part 3rd we have to do with the existing opinions. Had Aristotle pursued his usual method, he would have precluded his Ethics with a brief critical history of the previous progress of the science, in which the leading systems would have been refuted or shown to be inadequate. But it seems as if he did not set out with so clear a conception of ethics as he does of
physics and metaphysics. Before Aristotle, Ethics cannot be said to have existed as a separate science. Even in the present work there is no name for it as yet. Though ἰδία λόγοι and τὰ ἰδία are spoken of in the Politics (III. xii. 1, VII. xiii. 5), and in the Metaphysics (I. i. 17), yet the word ἰδιωτή does not occur. The science is still πολιτικὰ τις (Eth. I. ii. 9); as in the Rhetoric it had been specified as ἡ περὶ τὰ ἰδιά τραγματεία ἡν ὑπὸ δικαίων ἐστι πρωτογορεῖν πολιτικὴν (I. ii. 7).

Hence we may recognise something tentative and uncertain in Aristotle’s treatment of the subject. He seems not clear as to how far he is entering on a merely practical and political science, and how far on something speculative. He professes to lay the foundations for his science inductively (Ch. IV. §§ 5–7) in experience, but really obtains his own theory from a priori grounds, arguing what the Good must be. That Aristotle’s principle, thus obtained, is truly profound, we need not fail to acknowledge. Only, with regard to the science as a whole, we see that he was feeling his way; and we must not expect to find, even in the First Book of his Ethics, a finished work of art.

With this proviso, we may rapidly trace the sequence of ideas contained by the Book, as follows. The distinction between means and ends characterises every part of life and action. Given the subordination of means to ends, there must be some end which is never a means. This End-in-itself of all action is obviously identical with the Practical Chief Good (ἡλιον ὡς τοὺς ἐν ἐν τάγαθον καὶ τὸ ἀριστον). What, then, is this Chief Good—which must be the determinator of life—and which is the object of Politics, the supreme practical science?

To this question no answer is to be obtained from the common opinions of men; nor from their lives, for the most part; nor from the metaphysical system of Plato.

The Good and the End are always identical; hence, as already said, the Chief Good is identical with the End-in-itself. In this conception the idea of absoluteness and all-sufficiency would seem to be implied (τὸ γὰρ τέλεστι ἀγαθὸν αὐτοπλεκτὶ ἐναι ἐκεῖ). It must be realised in the proper sphere of man, which a consideration of the scale of life leads us to see must be a rational and moral existence: To give meaning to the conception of this existence, we must assume that it falls under the category of the actual; in other words, that it
is 'vital action' or 'the realisation of man's nature;' and this must be in accordance with its own proper law of excellence, and not frustrated by external adversity or shortness of duration. Hence we get a definition of the Chief Good for man—that it consists in 'a rightly harmonized consciousness in adequate external conditions.'

Comparing this fundamental principle (ἄριστον) with the opinions and theories of others, we find that it includes or supersedes them. From it we get an answer to the common question, 'Is happiness to be acquired by human efforts?' and by means of it we are able to see the shallowness of Solon's view implied in the saying that 'No man can be called happy while he lives.' It at once renders nugatory the question, 'Is happiness praiseworthy or above praise?'

Assuming, then, the definition as above, let us examine its component parts. And, first, what is that law of excellence (peculiar to man) which is to regulate his mind? A popular psychology serves as a basis for discussing this. Man is a compound of a rational and an irrational nature. Part of his irrational nature (the passions) rises into communion with reason. This part, then, and the reason itself, are two elements in which human excellence may be exhibited. According to this division, we distinguish, on the one hand, intellectual excellence; on the other hand, moral excellence or virtue: and these two may henceforth be separately discussed.
Πάσα τέχνη καὶ πᾶσα μέθοδος, ὄμως δὲ πρᾶξις τε καὶ προάρσεις, ἄγαθον τινὸς ἐφίσσθαι δοκεῖ διὰ

I. The opening of Aristotle's *Ethics* might be paralleled with that of his *Metaphysics*—πάντες ἄνθρωποι τοῦ εὐθείας δρόμουα φύσις. As there it is first said that 'all by a natural instinct desire knowledge,' and then Aristotle proceeds to distinguish among the various kinds of knowledge a supreme kind, which is Philosophy or Metaphysics; so here he says that every human impulse is prompted by the desire of some good, or is, in other words, a means to some end, and among ends there is one supreme end, which is never a means, the object of politics—the chief good, or human happiness. The beginning of the *Politics* is also very similar. All actions are done for the sake of what is thought to be good. Therefore all societies aim at some good, and that society which includes all others aims at the highest good. See Essay I. p. 20.

Πάσα τέχνη—δοκεῖ] 'Every art and every science, and so, too, each act and purpose, seems to aim at some good,' i.e. 'every exercise of the human powers.' The enumeration here given answers to the division of the mind (*Eth. *vi. ii.*) into speculative, productive, and practical. Μέθοδος is literally 'way' or 'road' to knowledge, i.e. a research or inquiry. The metaphor still appears in such places as Plato's *Republic*, vii. p. 533 c. τὰ διαλεκτικὰ μέθοδον μόνη ταύτην παρεχόμενον. Phaedrus 269 b. οὐκ ἦν Τιτάν· παρέχεται δοκεῖ μοι φανερῶς ἡ μέθοδος. It is further used in the sense of a regular or scientific method, and it stands here, as elsewhere (*Eth. *i. ii. 9, *Pol. *xix. 2, *Phys. *i. i. 1), for science itself. The word is well defined by Simplicius (in Arist. *Phys.* 1. 4), ή μετά ἑαυτοῦ τινὸς εὑρήκατον πρόσθες ἕκατο τὸ γνωστόν. Πράξεις and προάρσεις, action and purpose, go to make up one conception, that of 'moral action.' They are related as language to thought, the outer to the inner. Δοκεῖ does not imply any doubt in the assertion. Sometimes it denotes the opinion of others, not of Aristotle himself (*Eth. *i. iii. 2, *viii. 13, where see note*), but sometimes it is a part of style, to avoid the appearance of dogmatism. With this use of δοκεῖ may be compared that of similar words, such as ἄνωτε, 'no doubt,' (iv. viii. 9) ἄνωτε δὲ μᾶλλον καὶ σχέδιος (πεφωτισμένως); σχέδιον, nearly,' 'something like,' (i. viii. 4) σχέδιον γὰρ εἰς ἔκφρασις τις εἰρημένας καὶ σχέδιοι ἀφέων; μάλιστα, 'upon the whole,' (i. v. 2) τρεῖς γὰρ εἰς μᾶλλον αἱ
προβοχοντας (βλ. εἰς). Such phrases arise partly from Attic usage, partly from the genius of Aristotle's philosophy. A similar hesitation or moderation of statement is observable in his use of interrogations; e.g. (t. vi. 12) ἀλλ' ἄρα τι τὸ ἀρήν ἐνδαμόν; In such questions pόντον is very frequent, (t. vii. 11) Πόντον οὗ τόκων μὲν καὶ σκοτεινόν ὅστις ἐνόμον τινα καὶ πράξεις; and ἂ, which generally introduces the opinion to be preferred, ἡ καθὲ πρᾶξις ὑπέρτατο—ὅπως καὶ ἀνθρώπων πορὰ πάντα ταύτα θέλη τις ἄν ἔργον τι; Also ὡς frequently stands by itself, (t. vii. 1) τι ὡς ἐκάστης τὰ γιγανθ. ἡ δ' ἄριστον τὰ λειπάν πράξεται;

ἄρα καλὸς—ἐφίσταται] 'Hence people have well defined the good to be, that at which all things aim.' This same definition is mentioned in the Ῥητορικός, i. vi. 2, i. vii. 3. It is of uncertain authorship. At first sight its introduction here appears parenthetical; but rather it constitutes a sententious way of opening the subject. 'All we do aims at good, the very idea of good is that which is aimed at. But among ends (or aims) there is a subordination of one to the other.'

ἀν ἔνν θαρ—ἔργα τινα] 'For sometimes the end consists in the exercise of a faculty for its own sake, at other times in certain external results beyond this.' Strictly, according to the Aristotelian system, to speak of an 'ἔργα' not containing its end in itself is a contradiction in terms. But in a subordinate and relative sense, just as some τέλη are also means to ulterior ends, so some functions may be called ἔργα, which are also mere γενέσεις of external results; cf. Metaphys. x. ix. 11, and see Essay IV. p. 235.

τέρμα [τὸν—διακειται] 'Now all such operations as fall under some one faculty, as under riding, bridge-making, and all other manufactures of the instruments of riding; while this again, and every warlike operation, falls under strategy; and so (54) in the same way, other operations under some different faculty—in all, I say (56), the ends of the master faculties are more excellent than all those that are subordinate, for, for the sake of the former, the latter are sought after.' This sentence exhibits many of the peculiarities of Aristotle—(1) the indefiniteness of τέρμα. Of a similar indefiniteness as to the substantive referred to in περὶ αὐτῆς (Eth. i. viii. 1). It would be most natural to supply to the first τέρμα the word πράξεις, to the second the word τέχναι. But τέχναι and πράξεις are not here sharply distinguished, as appears by the words πολεμικὴς πράξεις. (2) Δυναμείς is here used in a sense from which the modern application of the word 'faculty' to law and medicine, &c., has been de-
tivā dúnum, katháter upò tôn ἱππικαὶ chalinosokikai kai ὅσαι ἀλλαί τῶν ἱππικῶν ὄργανων εἰς τὸν δυνατὸν ὁμοίως πάντα πάλημειν πράξῃς ὑπὸ τὴν στρατηγικήν τοῦ κατά Ὠδή τρόπων ἀλλαϊ ὑφ’ ἐπέφαν. ἐν ἀπάνταις δὲ τὰ τῶν ἄρχιτεκτονικῶν τέλη πάντων ἐστὶν αἰρετάτερα τῶν ὑπ’ αὐτᾶς τοῦτον γὰρ χάριν κάθειν διάκειται. διαφέρει δ’ οὖν ὁδὴ 5 τὰς εἶνεσάς αὐτὰς εἶναι τὰ τέλη τῶν πράξεων ἢ παρὰ ταύτας ἄλλο τι, καθάτερ ἐπὶ τῶν λεχθεισῶν ἐπιστημῶν.

Εἰ δὴ τι τέλος ἐστὶ τῶν πρακτῶν ὃ ὅτι αὐτὸ βουλόμεθα, 2 τάλλα δὲ διὰ τοῦτο, καὶ μὴ πάντα ὅτι ἄτερον αἰροῦμεθα

rived, through the term facultas, which was used by the Schoolmen. This belongs to the associations connected with δοσιμα in Aristotle’s metaphysical system. The use of this word for ‘an art’ appears, though less distinctly, in Plato. Aristotle, opposing δοσιμα to ἐνεργεία, treats the arts as a class of δοσιμα, i.e. certain capabilities of action; though they differed from other δοσιμα in being themselves not only developed into ἐνεργεία, but also formed out of them; cf. Eth. n. i. 4, Metaph. viii. n. 1, and see Essay iv. p. 190. (3) δὲ in ἐν ἀπάνταις δὲ is used to mark the apodosis. This is common in Aristotle, cf. Eth. vi. iv. 5, x. ix. 11. Looking to the protasis ἄσαι, we must also say that the sentence is an anacolouth. The whole style might be called a σχῆμα πρὸς θ’ σημαίνομεν. (4) The adjective ἀρχιτεκτονικός, as applied to the ‘hierarchy’ of the sciences, is not found in writers before Aristotle. The metaphor implied by it may have been suggested by Plato; cf. Politicus, p. 259 εἰ καὶ γὰρ ἀρχιτεκτονῶν γε νὰ ὁμοίως ἁπτῆσθαι, ἀλλὰ ἐργασών ἄρχων. The architect conceives the design, the labourers carry out the details; the former is concerned with the end, the latter with the means. In like manner the higher arts and sciences subject to themselves the lower; cf. Eth. n. i. 7, vi. viii. 2. 5 διαφέρει δ’—ἐπιστήμου] ‘But it makes no difference (to our argument) whether the development of the faculties be in itself the end of the different actions, or something beyond this again, as in the case of the arts above mentioned,’ i.e. the principle of subordination in the scale of means and ends will not be affected by the fact that ἐνεργεία are ends as well as ἔργα. In taking a walk, the end is walking for its own sake, i.e., an ἐνεργεία. In house-building, the end is the house, an external result, or ἔργον. But walking may again be viewed as subordinate to some other end, e.g. health or life, just as the house is.

ἐπιστήμου] When speaking strictly (Eth. n. iii. 9), and in his later terminology, as represented by Eudemus (Eth. vi. iii. 1), Aristotle distinguishes between ἐπιστήμη and τέχνη. But he frequently uses the former indiscriminately with the latter (cf. Eth. i. vi. 15), as also Plato had done, cf. Philebus, p. 57 b, and as ‘science’ is now in common language often used for ’art.’

II. 1 Ei δὴ—ἀρχων] ‘If then there is some end in the sphere of action which we wish for its own sake,
while we wish all other things for the sake of this—and if we do not choose all things merely as means to something beyond (since in that case the process will be infinite, so that our desire will be empty and useless), it is plain that this end in the sphere of action must be the chief good and the best.' This is the argument upon which the whole system of the Ethics is based. But from the undogmatic way in which it is expressed it is rendered at first sight obscure. It might be put thus: We have desires, these cannot be in vain; hence we cannot always be desiring means. There must be some end which is never a means, and which constitutes the true object of desire.

τέλος τῶν πρακτῶν] Aristotle is not enquiring after a metaphysical and transcendental good, like the Platonic Idea, but after a good attainable in action. τὰ πρακτὰ implies the whole class and sphere of means and ends which fall under the control of human will. A sort of scholium upon this term is to be found in the Eudemian Ethics, 1. vii. 4.

πράσινοι γὰρ οὕτω γ' εἰς ἀνευρον] The opposite and correlative terms ἑναι εἰς ἀνευρον and ἱστασθαι are used with various nomenclatives in Aristotle, and sometimes, as here, impersonally. Cf. Eth. i. vii. 7, εἰς ἀνευρον πράσινοι, vi. viii. 9, σημεῖα γὰρ πᾶσει.

διὸτι εἰναι κενήν, κ.τ.λ.] Aristotle applies here to the human mind and to the human desires his principle of universal import, ἀδελθὲς τοίτι ἢ φῶς. As everything in nature has its proper end, so too has human desire. There must therefore be some absolute good, desirable for its own sake, towards which our life ought to be directed.

2 ἀρ' οὖν—δέοντος] 'Must it not be, then, that for the conduct of life the knowledge of the good is of weighty influence, and that, like archers who have a mark to aim at, we shall be more likely to attain the requisite?' Cf. Hæc. i. v. 1: Σχεδὸν δὲ καὶ ἦδα ἐκάτω καὶ κοινῇ πάσι σκοπὸς τῆς ἔννοιας, οὐ στοχαζόμενοι καὶ αἰρόμενοι καὶ φάτος σου.

μᾶλλον] i.e. 'more than if we lived at haphazard without knowledge of the true end to be aimed at.' The metaphor of the archers comes from Plato; cf. Repub. p. 519 b: ἀνάγκῃ μήτε τοῖς ἄκακοις ἱκανοῖς ἐν ποιεῖσθαι τόλμης ἐπιρροτεῖσθαι, μήτε τοῖς ἐν παιδείᾳ ἑωμένοις διετριβέσθαι διὰ τέλους, τοῖς μὲν δὲ σκοπὸν ἐν τῇ βίῳ ὡς ἐχθροῖς, ἐνα, οὐ στοχαζομένοις δεῖ ἀπαντα πράττειν ἐν πράσινων ἔννοιας τε καὶ ἰδιωσίας, τοὺς δὲ, κ.τ.λ.

τοῦ δέοντος] not 'our duty' in the modern sense, this conception not having been as yet developed, but more generally 'what we ought to do' from any motive. The word δέον was a received term with reference to moral subjects. Cf. Plato's Repub. p. 336 b, where Thrasymachus, calling upon Socrates to define justice, says, 'Mind you don't tell me that it is the δέον, or the ἄφθιμον, or the κοινότη- λον, or the κερδαλλόν, or the χυμάρενον.' Cf. also Charmides, p. 164 b. Xen.
II.

Memorab. i. ii. 22. But the exact import of the term was not fixed. Aristotle in the Topics, ii. iii. 4, mentions among the πολλάκις λεγόμενα, Οὐν εἶ τε διὸν ἄντι τὸ συμφέρον ἢ τὸ καλὸν.

3 εἶ δ’ εὖν—δυνάμεων] ‘But if this be the case, we must endeavour to comprehend, in outline at all events, what it is, and which of the sciences or faculties it belongs to.’ Aristotle, proceeding tentatively to work, does not ask, ‘What science treats of the supreme end?’—but ‘To what science or art does its production belong?’ He seems at first encumbered with Platonic associations—that virtue is a science—that there is an art of life, &c. Just as in a Platonic dialogue we might have found this train of questions—’What is the science of healing called?’—Medicine. ‘What is the science of counting called?’—Arithmetic. ‘What then is the science of the welfare of states and individuals called?’—Politics. So here Aristotle says, ‘Every art has an end. There is some supreme end: of what art then is it the end?’ Accordingly he starts with the impression that the present treatise is an art rather than a science (cf. Eth. i. iii. 6, ii. ii. 1). He speaks of his present method aiming at the chief good. (1. iii. 1) Η μὲν οὖν μέθοδος τούτων ἐφέσται πολιτική τις οὖσα. Cf. 1. iv. 1, τι διότι οὐ δέχομεν τὴν πολιτικὴν ἐφίστασθαι. Afterwards (Eth. x. ix. 1) he makes an imperfect separation between the scientific theory of virtue and the practical attainment of it.

4 δὲξει δ’ ἂν—ἀρχηγετικήν] ‘Now it would seem to be the end of that which is the most absolute, and most of a master science.’ The word κυριωτάτης seems used somewhat indefinitely. Two trains of association are mixed up in it. κύριος means (1) what is authoritative, what determines; cf. Eth. i. 9, κύρια εἰς ἰδιαμορίας. (2) What has validity, especially the validity of custom, what is established. Cf. Poet. xxii. 5, 6, and Rhetor. iii. ii. 2, where κύριον δύναμι stands for ‘a word in its proper sense,’ opposed to all uncommon turns and applications. In Eth. vi. xiii. 1, κυρίων ἄρετῆς is ‘virtue in the full sense of the term,’ opposed to φυσικῆς ἄρετῆς, ‘a virtuous disposition.’ Eth. vii. iii. 14, τῆς κυρίων ἐπιστήμης ἕνα δοκοῦμεν, ‘that which might properly be called science.’ Hence τὸ κύριον comes to mean that which is striking, characteristic, and essential in a conception. Cf. Eth. i. vii. 13, κυριώτερον γὰρ αὐτῇ δοκεῖ λέγεσθαι. ix. ix. 7, τὰ δὲ κύρια ἐν τῇ ἐνεργείᾳ. In the passage above, κυριωτάτης seems partly to mean ‘most authoritative’ or ‘absolute,’ partly ‘that which is most absolutely a science.’

5 τοιαύτῃ δ’ ἡ πολιτικὴ φαίνεται] Plato generally represents virtue as a science, and politics as inseparable from dialectic or metaphysics. In the Enulgidemus, however, (p. 291 b) he describes politics as the supreme art, in terms from which the present passage is obviously borrowed. See Essay III. p. 190. Aristotle says that all the other arts and faculties, however dignified, are subordinate to this (ὅπως ταύτην) and are its instruments (χρωμάτις ταύτης ταῦτα λοιπάδα). Their very existence depends on the fact of politics (τίνα ἐστι χρείας διατόμεν).
Hence, as all others are means to it, the end of politics must embrace the ends of all the other arts. Politics will be the art whose end is the chief human good.

8 ei γὰρ καὶ ταύτω—πόλεμων  For even supposing the chief good to be identical for an individual and a state, that of the state appears at all events something greater and more absolute (τελευτός) both to attain and to preserve. Even for an individual by himself it is indeed something one might well embrace with gladness, but for a nation and for states it is something more beautiful and divine.

In Aristotle’s Politics (vii. iii. 8) the chief good, or end-in-itself, for a state is portrayed as consisting in the development and play of speculative thought, all fit conditions and means thereto being implied and presupposed. To this high, but indefinite, ideal, the term θεῖον would be naturally applied. Like the word ‘divine’ with us, θεῖον is used by Aristotle to express the highest kind of admiration, tinted with a feeling of enthusiastic joy, but also with some degree of vagueness. It is specially appropriated by him to the various manifestations of Reason (νοῦς) in the universe: thus (1) to the substance of the Heavens, De Caelo, i. ii. 9, οἷα σάμματος θεοτέρα καὶ προτέρα τοῦτων ἀκόμα (see Essay V. p. 272), (2) to the Heavenly Bodies, De Coel. ii. xii. 13, τῶν σωμάτων τῶν θεῶν, (3) to the intellect of man, De Part. An. iv. x. 8, διὰ τὸ τὴν φύσιν αὐτοῦ καὶ τὴν οὐσίαν ἐκεῖν ἐλεύθερον ἔχον δὲ τοῦ θεοτάτου τὸ νοῦν καὶ φρονεῖν, (4) to the life of contemplation, Eth. x. vii. 8, οὐ γὰρ ἵνα θεοπάθει ἐστιν αὐτῷ μιᾶς, ἀλλ’ ἵνα θεῖον τι εἶναι ἀπαθεῖται, (5) to happiness in general, Eth. i. ix. 3, φαίνεται τῶν θεοτάτων εἶναι, (6) to superhuman virtue, consisting in unalloyed reason, Eth. vii. i. 1, ἡ ρωσικὴ τύχα (ἀρετήν) καὶ θεῖον, (7) to the instinct of bees, De Gen. An. iii. x. 27, θεῖον τι (ἐξεῖ) τὸ γένος τὸ τῶν μελιτῶν.

9 πολιτικὴ τις οὖσα] Aristotle has not yet arrived at the conception of Ethics as a separate science. He still, following Plato, identifies it with politics, or makes it ‘a kind of politics.’ By his treatment however of the questions of Ethics he prepared the way for its separation from politics, which indeed was partly made by Eudemos, and afterwards entirely by the Stoics.
III. In connexion with every science, Aristotle never fails to pay attention to the logic of science,—to ask what the proper method of the science ought to be. In Ethics, where he is entirely feeling his way, without predecessors to guide him, it was especially natural that he should make a pause to enquire what is the proper form and logical character of the science on which he is entering. Accordingly we find three digressions relative to the logic of Ethics in this first book. (1) In the present chapter he decides that it cannot be an exact science. (2) Chapter 4th, §§ 5—7, he declares, though not dogmatically, that it must be rather inductive, than based on _a priori_ principles. (3) In chapter 7th, §§ 17—21, not quite consistently with the last assertion, he dwells upon the importance, for the future development of the science, of the principle (ἀρχή) which he has evolved in his definition of the chief good; which principle is henceforth to be applied to the elucidation of all difficulties in detail.

I Ἀγωνία ἢ ἄν ικανός—δημιουργομένου. "Now we must be satisfied with the statement of our science, if its distinctness be in proportion to the nature of the subject-matter. For exactness is not to be expected equally in all reasonings, any more than in all the productions of art." Matter as opposed to form was called by Aristotile ὄλη, or τὸ ὑποκειμένων, that which underlies the form. Cf. _Pol._ 1, viii. 2: Λέγω δὲ ἐπεὶ τὸ ὑποκειμένων ἐξ ὑφὶ
practical point of view about moral distinctions, which in reality his subsequent procedure entirely sets aside.—

On the position of this opinion in the history of philosophy, see Essay II. pp. 140—150.

* And things good also exhibit a similar sort of fluctuation.*

The two leading questions of morals may be said to be, what is right? and what is good? The ancient Ethics rather tend to absorb the former into the latter, the modern systems vice veris. Aristotle here, from his present empirical ground, says there is an equal uncertainty about things good, as about things right. Cf. Eth. v. i. 9; Xen. Mem. iv. ii. 33.

We must be content then, while speaking on such subjects, and with such premises, that the truth should be set forth roughly and in outline, and, as we are reasoning about and from things which only amount to generalities, that our conclusions should be of the same kind also. In the same way must each particular statement be received. The man of cultivation will in each kind of subject demand exactness so far as the nature of the thing permits: for it appears equally absurd to accept probable reasoning from a mathematician and to demand demonstration from an orator. Every one judges well of things which he knows, and of these he is a good critic. In particular subjects then the man of particular cultivation will judge, and in general the man of general cultivation.

A common formula in Aristotle. Cf. Rhetor. ii. i. 1.

is with Aristotle the object of a single science; μα ἐν μιᾷ διδασκαλίᾳ ἐστὶν ἡ ἑνὸς γένους (Anal. Post. i. xxviii.). Cf. the whole of Meta. ii. iii.

In his preliminary inquiries as to the right method of different sciences, Aristotle elsewhere adds that it will be the office of παιδεία, or the παιδευόμενος, to arbitrate on the question. Paideía has of course in these places a restricted sense. It does not imply the cultivation of the whole man, but a certain special cultivation in relation to science, in short much the same state of acquirement as in modern times is expressed by the name connaisseur. The chief passage on this subject occurs De Partibus Animal. i. i. 1: περὶ πάσας διεξαγωγὰς τῶν καὶ μέθοδον, ὅπως ταπεινωτέρα τοῖς καὶ τιμωτέραῖς, δύο φαίνονται τρόποι τῆς ἐξών ἐστιν, δὲν τὴν μὲν ἐπιστήμην τοῦ πράγματος καλῶς ἔχει προσκοπήσει, τὴν δὲ ὀλίγον παιδείαν τινά. Then follow the characteristics of the παιδευόμενος, which are said to be πρὸς
III.] ΗΟΙΚΩΝ ΝΙΚΟΜΑΧΕΩΝ I. 427

ἐπιζητείν καὶ ἔκαστον γένος, ἐφ’ ὅσον ἦ τοῦ πράγματος ψυχῆς ἐπιζήτεται, παραπληγίαν γὰρ φαίνεται μαθηματικὸν τὸ πιθανολογοῦντος ἀποδείχθαι καὶ λογικοῦ ἀποδεί-
χεις ἀπαιτεῖν. ἔκαστος δὲ κρίνει καλῶς ἢ γεννότως, καὶ 5 τούτων ἔστιν ἄγαθος κριτῆς. καὶ ἔκαστον ἢρα ἐπιλη-
πευμένος, ἀπλώς δ’ ὁ περὶ πάν παπαῖδεμένος. διὸ τῆς πο-
λιτικῆς ὥς ἔστιν ὁικεῖος ἀκροτήτης ὁ νέος. ἀπειροὶ γὰρ τῶν κατὰ τὸν βίον πράξεων, οἱ λόγοι δ’ ἐκ τούτων καὶ περὶ
tούτων. ἔτι δὲ τῶν πάθεσιν ἀκολουθητικῶς ἃν ματαίως 6

...
as he is given to follow his passions, he will hear uselessly and without profit, since the end (of our science) is not knowledge but action.' Aristotle goes off into a digression here, and adds that the youth will not only be an incompetent, but also an unprofitable, student, on account of a moral disqualification in the weakness of his will. In saying of Politics that ‘its end is action,’ we must not suppose that Aristotle meant to imply that it was ‘practical’ in the modern sense, i.e., hortatory, as opposed to philosophical. As before, he is viewing Politics as a sort of supreme art. Cf. Eth. ii. ii. 1. Afterwards, Pol. iii. viii. 1, he takes quite a different attitude; he excuses himself for prolixity by saying τῷ δὲ περὶ ἐκάστην μέθοδον φιλοσοφοῦσιν καὶ μή μύσον ἀποδηλοῦσιν πρὸς τὸ πράξαις ἱκανῶς ἐτοί τὸ μή παραξεῖν μηδὲ τι καταλεῖπεν.

[metales ἀνακόσμηται] Shakespeare had seen the present passage quoted somewhere, and by a remarkable anachronism he puts it into the mouth of Hector. Cf. Troilus and Cressida, act ii. sc. 2.

'Paris and Troilus, you have both said well; And on the cause and question now in hand
Have glossed—but superficially; not much
Unlike young men, whom Aristotle thought
Unfit to hear moral philosophy.'

7 οὗ γὰρ παρὰ τὸν χρόνον ἡ ἐλλειψις ἡ For the deficiency is not caused by time.' Cf. Thucyd. i. 141, οὗ γὰρ παρὰ τὴν ἀκούσιν ἐξελέγαντα οἷον Ἠράκλειν. Arnold compares παρὰ in this sense with the English vulgarism, 'all along of.' Cf. Eth. iii. v. 19, τί καὶ παρ’ ἄλλον.

IV. 1 Returning from a parenthetical discussion of method, Aristotle takes up (λέγων ὧν ἀναλαβόντες) the original question, 'What is it that politics aim at, what is the highest practical good?' The original four terms τέχνη, μέθοδος, πράξεις, προαιρετικαί, are here reduced to two, γνώσεις and προαιρετικαί. In the latter πράξεις is implied. And τέχνη is omitted as falling under the practical powers in man (cf. Eth. vi. ii. 5). Thus human nature, which was before classified as productive, scientific, and moral, is here
πλείστων ὑμολογεῖται. τὴν γὰρ εὐδαιμονίαν καὶ οἱ πολλοὶ καὶ οἱ χαράντες λέγουσι, τὸ δὲ ζῆν καὶ τὸ ζε 
πράττειν ταύτων ὑπολαμβάνουσι τῇ εὐδαιμονίᾳ. περὶ 
δὲ τῆς εὐδαιμονίας, τὰ θεῖα, ἀμφισβητοῦσι καὶ οὐχ ὑμο-
λος οἱ πολλοὶ τοῖς σοφοῖς ἀποδίδοσιν. οἱ μὲν γὰρ τῶν ἐναργῶν τι καὶ φανερών, οἷον ἠδανήν ἢ πλούτου ἢ τιμῆν,
ἄλλοι δὲ ἄλλα, πολλάκις δὲ καὶ οὐκ ἀντίκειται· νοού-
σας μὲν γὰρ ὑγίειαν, πενόμενος δὲ πλούτου· συνειδῆτε 
δὲ ἑαυτοῖς ἀγνοοῦν τῶν μέγα τι καὶ ὑπὸ αὐτῶν λέγοντας

summed up as moral and intellectual.

2 There is a verbal agreement, but under this an essential difference, be-
tween men as to their opinion of the chief good. All use the same word,
' happiness.' They go a step beyond this together, and say it consists in
'living-well and doing-well.' Any further attempt at definition shows the
discrepancy of their notions. On
theories of the chief good, see Essay
II. pp. 101—102.

οἱ πολλοὶ καὶ οἱ χαράντες] 'The
many and the refined.' This clas-
sifies the whole body of thinkers.
The many are opposed to the philo-
sophers (οἱ σοφοὶ) and to the educated,
the refined, the few. This opposition
has always existed. It appears most
strongly in the philosophic isolation
of Heraclitus the ὕληλασιδόρος. It is a
natural distinction, since philosophical
views are not inborn, but acquired,
and imply education, leisure, deve-
lopment. That both classes, however,
are in a different way possessed of
the truth (wholly or partially), Aristotle
would always acknowledge. Cf. Eth.
1. viii. 7.

ἐν πράτειν is an ambiguous phrase.
In its usual acceptation it would rather
mean 'faring-well' than 'acting-well.'
It occurs in the Gorgias of Plato, p.
507 ε, in a way which seems to contain
the transition between these two ideas

---polli ἄνδρων καὶ ὁ Καλλάδας, τὸ
οὐσίων ἐνδιδομένη, δικαιὸν ὑπά
καὶ ἀνθρώπων καὶ ὅσιον ἄγιον ἀνθρώ
πος τελειός, τὸν δὲ ὄρνηθον καὶ τοὺς
calor πράτειν ἃ ἄν πράτειν, τὸν ὅν ἐν
πράτειν μεταφέν τι καὶ εὐδαιμονία
εἶναι, τὸν δὲ πονηρόν καὶ κακὸς πράτειν
ἀξίων. Aristotle was at no pains to
solve the ambiguity. Cf. Eth. vi. ii. 5.

3 οἱ μὲν γὰρ ἐναργῶν· ἐναργῶν] 'For the one
class (i.e. the many) specify something
palpable and tangible, as, for instance,
pleasure, or wealth, or honour; in
short, different of them give different
accounts, and often the same individual
gives an answer at variance with
himself, for when he has fallen sick
he calls it health, but being poor
wealth; and when people are con-
scious of ignorance they look up with
admiration to those who say some-
things fine and beyond their own
powers. On the other hand certain
(philosophers) have thought that be-

yon all these manifold goods there
is some one absolute good, which is
the cause to these of their being good.'
Εἷνοι δὲ corresponds to οἱ μὲν γὰρ.
'Palpable and tangible' are analogous
though not identical metaphors with
ἐναργῶν τι καὶ φανερῶν.

συνειδῆτε κ.τ.λ.] Consciousness of
ignorance makes people fancy wisdom
to be the chief good.—So the Parm-

phrasel explains the passage.
This of course relates to Plato's theory of the Idea.

But it is sufficient to examine the opinions most in vogue, or that seem to have some reason in them. A similar canon of authority is given, Eth. i. viii. 7.

'Very obvious.' The original sense is found in Hist. Anim. viii. ii. 17: Ποιοί τεις θεοί καὶ ἀπόλλυτα πολλάκις (αἱ χελωνές), ἦσαν εἰπολάζοντες ἐπαινετός ὑπὸ τοῦ ἱλίου· καταφρήσαντες γὰρ πάλαν ὡς ὅσιον βρότους. Hence ἐπιπολάζοντας and ἐπιπολάζων come to mean 'what lies on the surface,' 'is easily to be found.' Eth. i. vii. 4. ἐπιπολάζοντας τοῦ γελοῦν, 'constantly turning up,' and in the Axiochus which bears Plato's name, p. 369 ν, εἰς τὸν ἐπιπολαζόμενον τὰ τῶν λοχυχητίων.

Rhet. iii. xi. 4. ἐπιπολαζόμενον γὰρ λόγομον τὰ παντὶ δῆλον καὶ μὴν δῆλον δεῖ γνώτισαι, Eth. End. iii. ii. 4. ἐστι δὲ οὐ πάντων γνῷσιν τὰ πάθος οὖν ἐπιπολάζων. From this meaning to that of 'superficial' is but a slight transition. i. ν. 4, φαίνεται δὲ ἐπιπολαζόμενον εἶναι τοῦ γνώσιμον.

5 From hence to the end of the chapter follows the second digression on the method of ethics. The question now is, whether the Science is to be inductive or deductive, whether the reasoning is to be 'from principles,' or 'from principles.' Aristotle gives a qualified decision in favour of the former of these alternatives.

For Plato rightly used to doubt and question whether the way was from principles or to principles, as, in the stadium, whether from the judges to the goal, or reversely. We must begin, at all events, with things known, and these are of two kinds; for some things are known relatively, and some things absolutely. There is no particular passage in the works of Plato, which we can say is here referred to. That at the end of Book vi. of the Republic has a widely different scope. It does not compare the Inductive with the Deductive Method, but describes dialectic as a progress up the ladder of hypotheses to the idea of good, and a descent again without any help from the senses, by successive steps, which are ideas, and are connected with the idea of good.

The use of the word Πλάτων here without the article shows that a personal reference to the philosopher is intended (see note on Eth. vi. xiii. 3). The use of the imperfect ἔθεσε shows that the reference is general; when Aristotle quotes from a particular passage in the Laws of Plato (Eth. iv. iii. 2), he says ὡς ὁ Πλάτων φησιν.
division of knowledge, into things 'relatively' and things 'absolutely' known. The former implies the knowledge of experience, so far as it depends on the individual perception; it is therefore concrete (γνώσεως τῆς ανθρώπου, Post. Anal. i. ii. 5), while the latter is abstract (τὰ πορφῦρα), but being independent of individual experience, it is absolute (τὰ σοφίστερα τῷ φύσει καὶ γνωριμάτερα, Phys. Aequiv. i. i. 1). We must observe that the distinction is not between things relatively and absolutely 'knowable,' but 'known.' The highest truths are actually in themselves better known than the phenomena of the senses. This is said independently of individual minds, and implies a reference to the impersonal and absolute reason; when Aristotle speaks of the universal being in itself more known than the particular, this is as much as to say it has a more real existence, just as Plato said that the Ideas were most true, while phenomena only partake of truth (μετέχει τῆς ἀληθείας).

6 Tous oðo—γνωριμοῖο] 'Perhaps then we at all events must commence with what we know,' Aristotle was probably unconscious of the sort of pun in this sentence. He merely asserts that we (i.e.) ethical philosophers must start from a basis of personal experience.

6—7 διὰ δὲν—μῆλωσι] 'Therefore he should have been well trained in his habits who is to study aright things beautiful and just, and in short the whole class of political subjects. For the fact is a principle, and if the fact be sufficiently apparent we need not ask the reason. Now he who has been well trained either has principles already, or can easily obtain them.' He returns to the qualifications of the ἀριστοτέλη. But here previous knowledge seems required in a different way from that mentioned above (i. iv. 5). The object is here not κρίνων τὰ λαγόμενα, but ἐπιστάμενοι.

ἀρχή γὰρ τῷ δὲν] The same is repeated below (i, vii, 10). The term ἀρχή appears to be used here ambiguously. It may either mean a starting-point, or a universal principle. It seems to hover between those meanings, and to express that a moral fact has something at all events potentially of the nature of a universal.

ἀρχὰς (in § 7) is used definitely for universal principles.

δὲ τοιοῦτον] i.e. δὲ καλῶς ἀγαθών. Such a one is in possession of moral facts, which either stand already in the light of principles, or can be at once recognised as such on the suggestion of the philosopher. In the former case he will resemble Hesiod's πανάρτος, in the second case the ἱσθαλὸς δὲ εἰς εἰρήνην πίθηκοι. If he can neither discover nor recognise principles, he is ἅρμην ἀρνή.

ὑπότις μὲν, κ.τ.λ.] Hesiod, Works
and Days, 291—295. After νοηρι in
the editions of Hesiod, in some MSS.
of the Ethics, and in the Paraphrase,
comes this verse, φασάμεθα τα στερεά και εξεύθεν γένος 
δε. The whole passage succeeds one quoted by
Plato, Repub. ii. 364 c; Legg. iv. 718 
x; and by Xenophon, Mem. n. i.
20, on the difficulty of virtue. The
sentiment is borrowed by Livy, xxxii.
xxxiii. Cf. Cicero pro Ouenio, c. xxxli.;
Soph. Antig. 720; Herod. vii. xvi.

V. i 'Ημείς δ'—δεαλμαβάνειν. But
return from our digression.—since
people seem willing to form their
conceptions of the chief good and of
happiness from men's lives,' (sec. 'let
us examine these'). The γάρ shows
that the above clause explains the
object of this chapter, which is, to
examine men's opinions of the chief
good, in the concrete, by a criticism
of their lives. Men's lives exhibit prac-
tically their ideas of what is desirable.

ἐν τῶν βίων] βίος is the external
form, opposed to ὡς, the internal
principle of life. Thus βίος is 'line
of life,' 'profession,' 'career.' Cf. Eth. ix.
ix. 9, x. vi. 8; Plato, Repub. x. 618 α, 
v. τῶν βίων παραδέσμητα.

2 of με—διαφρρικός] 'Now the
many and the vulgar (conceive) plea-
sure (the chief good), whence also
they follow the life of sensuality. For
the most prominent lives are on the
whole (μάλιστα) three in number, that
just mentioned, and the political life,
is untenable. Aristotle omitted the 
**βίος χρησκευτικός**, as he tells us pre-
sently, because, as not being purely 
voluntary (βιοίς τις), it does not exhibit a 
conception of happiness. Though it 
may have many adherents, these 
do not seek it spontaneously, as con-
taining happiness in itself.

3. ό μὲν οὖν—**Σαρδανάλπας**] The 
life of sensuality is that which the 
vulgar propose to themselves as their 
ideal of happiness. This they would 
pursue if they could obtain the ring of 
**Γγυς** (Plato, Repub. ii. p. 359, c). 
And though Aristotle repudiates it 
immediately as vile and abject, yet he 
places it on the scale (τυγχάνουσι λό-
γου) because great potentates (πολλοὶ 
τῶν εν τῷ εἴσοδῳ) show themselves 
of the same mind as Sardanapalus, 
thinking nought but sensuality 'worth 
a fillip,' while they have everything at 
their disposal, and are of all men most 
free to choose.

τυγχάνουσι λόγου] 'They obtain 
consideration,' i.e. both in the eyes of 
men in general, and also in the pre-
sent treatise. Cf. Eth. x. vi. 3.

**Σαρδανάλπας**] Cicero, in Tusc. Disp. 
v. xxxv. (cf. De Finibus, ii. xiii.), 
mentions the epitaph of Sardanapalus as 
quoted by Aristotle. 'Ex quo Sar-
danapali, opulentissimi Syrian regis, 
error agnoscitur, qui incidi jussit in 
busto:

**Hec habeo, quae edid, quaeque exstant 
vata libido**

**VOL. I.**
5—6 Moreover, honour is not only an insecure possession, but it seems not even desired for its own sake. It is desired by men as an evidence of their merits. Cf. Eth. v. viii. 2, where he says more at length that most men appear to seek honour κατὰ συμβεβεβηκός; the many seek it at the hands of those in power, as an earnest of future advantage; the good seek it from the excellent and from competent judges, as a confirmation of their own opinion about themselves. Thus the consciousness of virtue is the end, to which honour is the means. If virtue then be regarded as the end of the political life, will this answer to the chief good? No, it falls short of being a supreme end (ἀτελεστέρα καὶ αἰσθή). For it might subsist in a life of absolute inaction, or of the heaviest misfortunes. And to call this happiness would be paradoxical.

[ἕσσε τῆν ἁρετήν] It is the ἔσσε τῆς ἁρετῆς, virtue regarded as a mere quality, which Aristotle repudiates, past merits, or the passive possession of qualities, whose existence depends on the attestation of fame, cannot be thought to constitute the chief good. Very different from this is ἰερευνημένον ἀρετήν, an actual life of virtue in the present.

εἰ μὴ θέσων διαφυλάττων] 'Unless defending a paradox.' Theories in demonstration are those improved principles necessary to the existence of each separate science, just as δύναμις are to the existence of reasoning in general (Post. Analytics, i. ii. 7), but theories in dialectic (the kind here meant) are paradoxical positions resting on the authority of some great name; Topics, i. xi. 4: θεώς δι' ἐστιν ὑπόλαυσις παράδοσις τῶν γνωρίσμων τυπικὰ κατὰ φιλοσοφίαν, oυ, ὦτι ὦτι ἀντιλέγειν, κάθανεν ἐφ' Ἀριστοτέλης... κ. τ. λ. The above paradox (ὅτι ἀδύνατος ἢ ἁρετή πρὸς τὴν εὐδαιμονίαν) was one the Stoics afterwards ventured to maintain. Cicero (Paradoxa II.) defends it with rhetorical arguments—arguing the greatness of Regulus in his misfortunes, as though that were identical with his happiness.

καὶ περὶ μὲν—ἀδύνατον] 'But enough on this subject, for it has been sufficiently discussed even in popular philosophies.' Cf. De Caelo, i. ix. 16: καὶ γὰρ καθάπερ ἐν τοῖς ἐγκνειλέοις φιλο-
which our investigation shall be made hereafter." This promise is fulfilled in Book x. We have here undoubted proof of an idea of method, of a constructive whole; see Essay L p. 45.

8 ο δὲ χρηματιστής—χάριν] 'But the life of gain is in a way compulsory, and it is plain that wealth is not that good we are in search of, for it is an instrument and means to something else.' With χρηματιστής understand bios. Lambinus finds in two MSS. χρηματιστής bios ἄριστος τις ἡστι. This is evidently a gloss. bios is to be explained by comparing the parallel passage in Eth. Eudem. 1. iv. 2: Διηργοῦν τῶν βιων, καὶ τῶν μὲν [οὖν] ἀμφισβητοῦντων τὴν τοιαύτης εἶναι ἐπιμελείας, ἀλλ' ὥστι τῶν ἀνάγκων χάριν σπουδαιούμενον, οὐν τῶν περὶ τὰς τέχνες τὰς ψυχικὰς καὶ τῶν περὶ χρηματομον καὶ τὰς βιωδεῖς—τῶν δὲ εἰς ἐνέγην εὐδαιμονική ταυτομείων τριών ἄτοιν. 'Now the lives of men being divided, and the one class laying no claim at all to this kind of good fortune, but being devoted to the obtaining the necessities of life, as for instance those engaged with mean arts and labor and servile crafts; while the others, which are ranked severally as in the enjoyment of Happiness, are three in number.' Here οὖν is restored by the absolutely certain conjecture of Bonitz. bios τις exactly corresponds with οὖν ἀμφισβητοῦντων—σπουδαιούμενων, and so it is understood by the Paraphrase: καὶ ἄριστος bios. Οὔτε γάρ τὸ ἐνεχθὲς διόκει, οὔτε πάντως διόκει διάκειν. 'Othou oû polloi oûn ãkroû, oûn ãkroû, ãkroûmen, ãkroûmen. 'Othou oû polloi oûn ãkroû, oûn ãkroûmen, ãkroûmen, ãkroûmen, ãkroûmen, ãkroûmen, ãkroûmen.

7 τρίτος δ'—ποιησθεῖσα] 'Third is the life of contemplation, about
active sense. It is the opposite of ἐκόλος, meaning ‘forced,’ as in ἔρχονται. It implies that no one would devote himself, at the outset, to money-making, except of necessity, ‘parce qu’il faut vivre.’ It assigns the reason for not discussing the life of gain. An additional and final reason is subjoined—that wealth is a mere means. Other and mistaken explanations of this place are (1) that of Eustatius. ‘The usurer is violent,’ ὅτι δὲ πλατέον πρὸς τὸ κτήσαντον. The same has been adopted in the Latin translations, where ‘violentus’ is used. In Dante’s Inferno, Canto XI., is a complete commentary on this. Dante, who only knew Aristotle in the Latin, but studied him more, places usurers among ‘the violent’ in hell, and gives learned reasons for this classification. (2) That of Giphanius, who, rightly taking βίας to be the omitted word, interprets ‘vita nature contraria.’ It is true that in several places βίας is opposed to κατὰ φύσιν, and in such contexts means ‘unnatural;’ Phys. Auct. iv. vii. 4; vi. vi. 6; Politics, i. iii. 4. But without such a context, it cannot simply stand for παρὰ φύσιν. Besides it is not easy to see why the life of gain, more than the life of ambition, should be called ‘unnatural.

καταβαλλόνται The general meaning is: ‘Although much has been said to show that each of these is the chief good, it has been unavailing.’ But a doubt remains as to the precise force of καταβαλλόνται. Does it mean, ‘have been wasted?’ or simply ‘have been laid down, promulgated?’ This latter rendering is confirmed by De Mundo, vi. 3: ἔτι ὡς τῶν πολλῶν ἐνίον τινί πρόκειται. ὁτι τότε πάντα ἔστι διαθέσις. . . . τῷ μὲν θείῳ διαθέσει πρόσωπα καταβαλλόμενοι λόγοι, οὐ μὴν τῷ γε οὐδίκ. By a slight extension of meaning we have in the Politics, καταβαλλόμενα μαθήματα (vii. ii. 6), καταβαλλόμενα παιδείματα (viii. iii. 11), ‘ordinary, usual branches of learning.’

VI. Aristotle now proceeds to examine, or rather to attack, the Platonic doctrine of the Idea of Good. To test the worth of this criticism belongs to a consideration of the entire relation of Aristotle to the views of Plato. See Essay III. The arguments used are as follows: (1) the Platonists allow that where there is an essential succession between two conceptions, these cannot be brought under a common idea—but there is such between different manifestations of good, e.g., the useful is an essentially later conception. (2) If all good be one, it ought to fall under only one category, whereas it can be predicated under all. (3) If it were one, it would be treated of by only one science. (4) The Idea is, after all, only a repetition of the phenomena, for with these it is really identical. (5) Even the most essential and absolute goods seem incapable of being reduced to one idea. (6) It is more natural to consider good an analogous word, and to assign to it a nominalistic, rather than a realistic, unity.
(7) But however this may be, it is plain that the idea can have no relation to practical life, and therefore it does not belong to ethics.

Plato, here as elsewhere, is in the highest degree cordial. But in the arguments used there is something captions.

καὶ τὰ ὀψιά ἀριστεῖν] Cf. Thuc. i. 41: ἐκεῖ καὶ τὰ ὀψιά χαρον τὸν φιλολογικόν ἔνεκα τῆς σοφίας.

ὅσιον προπίπτων τὴν ἄληθειαν] This is Plato's own sentiment about Homer; Repub. x. p. 593 c, ἀλλ' οὐ πρὸ τῆς ἀληθείας τιμηθεὶς ἄμφροι. He also applies the word ὅσιον in a similar context, Repub. ii. p. 368 b: δέδοκα γὰρ μή οὖνὕσιον ἦ παραγενέθρομεν δικαστικὴ κακωμορμία ἀπαγορευθεὶς, κ.τ.λ.

2 οἱ δὲ κοιμάσαντες—κατακεκλεισάν] 'Now they who introduced this opinion used not to make ideas of things of which they predicated priority and posteriority, and hence they constructed no idea of numbers.'

κοιμάσαντες] Cf. Top. VIII 5, 6, κοιμάσαντες ἀλλοτριάς δόξας. The words ἄξιον ταύτην καὶ ἄξιον ἄξιος seem used, as if purposely, to express an arbitrary and fictitious system. With the above cf. Metaph. ii. iii. 10: ἦν οὖς τὸ πρῶτον καὶ βαστήρων ἄξιος.

καὶ τὰ πολλὰ ὑπὸ τοῦ πλούτου ἐνυπάρχοντες καὶ βαστήρων, ὡς ἔστω κἂν τὰ πολλὰ τοῦ πλούτου ἐνυπάρχοντες καὶ βαστήρων. Eth. Eudem. i. VIII 5: διὰ ἥτα αὐτὰ ὑπάρχει τὸ πρῶτον καὶ βαστήρων, ὡς ἔστω κἂν τὰ πολλὰ τοῦ πλούτου καὶ τοῦτο χωρίστων: "εἰς γὰρ τὸ τοῦ πρῶτου πρῶτον, πρῶτον γὰρ τὸ καύσι καὶ χωρίστων διὰ τὸ ἀναφορομένον τοῦ καινοῦ διαφέρειν τὸ πρῶτον. Ὁμών εἰ τὸ διπλάσιον πρῶτον τὸ πολλαπλα-
σών, οίκον ἐσι, διέπεσται τὸ πολλάπλασιόν τοῦ κατοικοῦμένον εἴναι χωροτάτον ἢσται γὰρ τοῦ διπλασίου πρῶτου, εἰς συμβαίνει τὸ κοινὸν εἶναι τὴν ἱδέαν. Aristotle often remarks about Plato, that he distinguished with regard to number, making two species of it, mathematical number, and transcendental or ideal number. We may ask of which kind of number it is here asserted, that it contains priority and posteriority, and therefore admits of being brought under no one idea? The answer is to be found, Arist. Metaph. xii. vii. 7: Οἱ μὲν οὖν ἀμφιτρόπους φασιν εἶναι τοὺς ἀριθμοὺς, τῶν μὲν ἐχειτα τὸ πρῶτον καὶ ὅστερον τὰς ἱδέας, τῶν δὲ μαθηματικῶν παρὰ τὰς ἱδέας. It is the ideal numbers of which Aristotle says that they stand in essential and immutable succession to and dependence on each other, and therefore can be brought under no common idea. Hence the mention of the ἱδέας and the διαλόγιον in the above-quoted passages, which refer to the Platonic doctrine of the ἱδέας ἀδρόσως, which by union with the one becomes ἡ πρῶτη ἱδέα, the first actual number. This ἱδέα is itself the first idea of all number, there can be no idea of it. (Cf. Met. xii. vili. 18 seq.) In some cases the ideas are identical with the manifestations of those ideas. Cf. Metaph. vii. vii. 6: καὶ τῶν τῶν ἱδεῶν λέγοντων δὲ μὲν αὐτογραμμέν τῇ ἱδέᾳ, οὐ δὲ τῷ ἱδέα τῇ γεγομένῃ, ἐνα μὲν γὰρ ἐστὶν τοῦτο τῷ ἱδέας καὶ ὅσι τῷ ἱδεῖ, οὐν δύο ἤδικα καὶ τῷ ἱδεῖ διδῶσ.

παραφυάδι—ὑποτασσόμενον. ‘For this may be compared to an offshoot and accident of substance.’ Cf. Ethet. i. ii. 7, συμβαίνει τὴν ρητορικὴν αὐτοῦ παραφυάδι τῇ διαλογικήν ἐλθεῖ. Aristotle argues that the relatively good (ἐν τῷ πρῶτο τῇ) must be a sort of deduction from the substantively good (ἐν τῇ ἱδέᾳ), therefore posterior to it in thought, and therefore incapable of being brought under a common idea.

3 ἦτε ἐπὶ τάγαθον—ἐπὶ ὅποιον—δήλων —μονῇ] ‘Again, since the good is predicated in just as many ways as existence is, it plainly cannot be a common universal, or a unity, else it would not have been predicated in all the categories, but in one alone. Good cannot be one, because it is predicated in all the categories. This is a logical, not a metaphysical test of Plato’s doctrine. That Aristotle made ten categories—that these were metaphysical summa genera, or an ultimate classification of all existence, is rather a deduction from his philosophy than what he had actually arrived at. The Categories with Aristotle were a classification of the modes of predication, and the number ten seems by no means fixed. The so-called book of the ‘Categories’ is in all probability not from the hand of Aristotle himself, but it shows a tendency in the Peripatetic school to merge the logical into a metaphys-
VI.] ΗΘΙΚΩΝ ΝΙΚΟΜΑΧΕΩΝ Ι.

οντι (καὶ γὰρ ἐν τῷ τί λέγεσθαι, οὐν ὁ θεὸς καὶ οὐκ, καὶ ἐν τῷ ποιῶς αἱ ἄρεται, καὶ ἐν τῷ ποιῶς τὸ μέτριον, καὶ ἐν τῷ πρῶτο τὸ χρήσιμον, καὶ ἐν χρόνῳ καιρῶς, καὶ ἐν τῷ τόπῳ διάιτα καὶ ἔτερα τοιαῦτα), δήλου ὡς οὐκ ἀν εἰπῦ κοινῶν τι καθόλου καὶ ἐν· οὐ γὰρ ἂν ἐλέγετο· ἐν πάσαις ταῖς κατηγορίαις, ἀλλὰ ἐν μιᾷ μόνῃ. ἕτει δὲ ἔπει τῶν κατὰ μίαν ἦδεν μία καὶ ἕπιστήμη, καὶ τῶν άγαθῶν ἀπαντών ἵν αὐτὸ τὰς ἐπιστήμης· οὔτε δὲ εἰς πολλαί καὶ τῶν ὑπὸ μίαν κατηγορίαν, οὐκ ἔχετο ἐν πολέμῳ μὲν στρατηγικῇ ἐν νόσῳ δὲ ἰατρικῇ, καὶ τοῦ μετρίου ἐν τροφῇ μὲν ἰατρικῇ ἐν τῶν δὲ γυμναστικῆς. ἀπορήσεις δὲ ἃν τις τὸ ποτε καὶ βούλουσαι· λέγειν αὐτόκαστο, εἰπέρ ἐν τε αὐτοανθρώπω καὶ ἀνθρώπω εἰς καὶ ὁ αὐτὸς λόγος ἐστιν ὁ τοῦ ἀνθρώπου. ἵνα γὰρ ἄνθρωπος, οὗτος διὰ συνείδησιν· εἰ δὲ οὕτως, οὕτως ἤγαθόν. ἀλλὰ μὴν οἴδαι τοῖς ἁλίνοις εἰκαί μᾶλλον άγαθόν ἐστιν, εἰπέρ μοῦ λευκότερον τὸ πολυχρόνιον τοῦ ἐφημέρου. πιθανότερον δὲ ἥκιστον οἱ Πυθαγόρειοι λέγειν περὶ αὐτοῦ,
succession,—first, the Eleatic principle, that ‘the One’ is the only really existent. Second, the Megarian development of this, ‘the One is identical with the good.’ Third, Plato’s adoption of this with modifications,—the One is the idea, opposed to plurality, or phenomena; the highest idea, and most essential, is that of the Good; this is transcendental, self-existent, the cause of existence to phenomena, and also of our knowing them; phenomena, however, have still a conditional existence, dependent on the idea (ἡμέρα τῶν οὐκείας). Fourth, opposed to Plato, and here contrasted with him, we find the Pythagorean doctrine which places ‘the One’ among the various exhibitions of good, whether as causes of good, or manifestations of it. The Pythagorean system was said to be devoid of dialectic (ὑπερεκτικώς οὐ μετέχουν, Ar. Metaph. i. vi. 7). We do not find in them anything like ‘critical’ philosophy, nor any rationale of cognition. They seem content to have seized on a few principles, the conception of harmony, order, and proportion in the world, &c. Their system, however, had a definite bearing, and part of this seems to have been the ignoring any transcendental principle, any principle otherwise than as exhibited in phenomena. In Metaph. xi. vii. 10, we find Aristotle repudiating a doctrine which Sporus shared with the Pythagoreans, namely, that good is rather a result of things than their cause. Sporus, nephew of Plato and successor to him as head of the Academy, seems, after the death of his master, to have manifested in several points a Pythagorean leaning (see Essay III. p. 216). It is mentioned, Metaph. xiii. iv. 10, that of those who held the doctrine of ideas, some considered ‘the One’ as identical with ‘the good,’ others not as identical, but as an essential element. If the one be identified with the good, it follows that multiplicity, or, in other words, matter, will be the principle of evil. To avoid making ‘the many’ identical with evil, some Platonists denied the identity of the one with the good. Of this section Speusippus was leader. He accordingly adopted a Pythagorean formula, saying that ‘the one’ must be ranked among things good. In the present place Aristotle must be regarded as not really entering on the question. His own metaphysical system stood quite aside all these mentioned. But he does not enter here upon a metaphysical consideration of the Good, as not belonging to ethics. He merely states objections to Plato’s doctrine, and in a cursory way alleges a prima facie preference (πεπεισαμένων νομοδογον λέγειν) for the Pythagorean theory, according to which the good was not transcendental, or separate from phenomena.

Ἐλλα ριπε μὲν τῶν τῶν ἀλασ ἀτῶ ἄντος ἄλγοςι: ‘But let us put off to another occasion the discussion of these questions,’ i.e. the whole subject of the good and its relation to unity—to existence—to the world. This is, in short, the scope of Aristotle’s entire Metaphysics. We need not confine the reference of ἐπὶ τῶν τῶν τῶν τῶν τῶν in the Pythagoreans and Speusippus, or refer it, with some commentators, to the books mentioned in the list of Diogenes (v. 25). τὸν Πυθαγορέαν, τὸν Σπευσίππου στὸν Πυθαγορέαν, τὸν."
VI.] ΗΟΙΚΩΝ ΝΙΚΟΜΑΧΕΩΝ Ι.

ἄλλος ἔστω λόγος, τοῖς δὲ λεγεύειτο ἀμφισβητηθῇς τις ὑποφαίνεται διὰ τὸ μὴ περὶ παντὸς ἀγαθοῦ τοῦς λόγους ἐφηθαι, λέγεσθαι δὲ καθ’ ἐν εἴδος τὰ καθ’ αὐτὰ διακόμενα καὶ ἀγαπώμενα, τὰ δὲ ποιητικὰ τούτων ἢ φυλακτικά πως ἢ τῶν ἐναντίων καλουτικὰ διὰ ταύτα λέγεσθαι καὶ τρόπον ἄλλον. δὴν οὖν ἢν ἢ διατίτις λέγοιτ’ ἂν τάγαθα, καὶ τὰ ὰ μὲν καθ’ αὐτά, διάτερα δὲ διὰ τάντα. χαράζοντες δ’ ὅν ἀπὸ τῶν ὁφελίμων τὰ καθ’ αὐτά σκαφώμεθα εἰ λέγεται κατὰ μίαν ἴδεαν. καθ’ αὐτά δὲ ποία θεία τις ἄν; ἥ δ’ ὅσα καὶ τοιοῦτα διάκρινεται, οἷον τὸ φρονέων καὶ ἡ τρέχει καὶ ἡ γονεύει τινὰ καὶ τιμαὶ; τάντα γὰρ οἱ καὶ δι’ ἄλλο τι διοίκομεν, ἵνας τῶν καθ’ αὐτά ἄγαθον λέγηται τις ἄν. ἥ ὠν ἄλλον ὀὐδὲν πλὴν τῆς ἴδεας; αὕτη μάταιον ἔσται τὸ εἶδος. εἰ δὲ καὶ ταύτ’ ἐστὶ τῶν καθ’ αὐτά, τῶν τάγαθος λόγον ἐν ἄπαισιν καθ’ αὐτὸς τῶν αὐτῶν ἐμφαίνεσθαι δεῖσθαι, καθάπερ ἐν χώρῃ καὶ ψυχωμίσῳ τῶν τῆς λευκότητος. τιμὴν δὲ καὶ φρονήσεως καὶ ἡμοῦ ἔτερον καὶ διαφέροντες οἱ λόγοι ταύτῃ ἢ ἄγαθα.

* τοῖς δὲ λεγεύειν—ἀλλον] 'But against my arguments an objection suggests itself, namely, that the Platonic theory was not meant to apply to every good (ὅδε τὸ μὴ περὶ παντὸς ἀγαθοῦ τοῦς λόγους εἰρήσθαι), but that under one head are classified those goods that are sought and loved in and for themselves (καθ’ ἀυτά), while things productive of these, or in any way preservative of them, or preventive of their opposites, are spoken of as "secondary goods" (ὅδε ταύτα), and in another fashion.' It seems best to refer τοῖς λόγοιν to the Platonic theory. The words καθ’ ἐν εἴδος are used not in the peculiarly Platonic sense, 'under one idea,' but in the more common and also Aristotelian sense, 'under one species.'

† οἱ αὖθις ἄλλα—εἴδος] 'Or is none of these, nor anything except the idea, to be called an absolute good? In which case the class good will be devoid of content and individuals.' The Platonic idea was meant to be not only an ἴδεα, or absolute existence, transcending the world of space and time, but also an εἴδος, or universal nature, manifesting itself in different individuals. This latter property, Aristotle argues, will be lost if we keep denying of different attainable goods, even those that seem most plainly so, that they are goods in themselves.'

†† φρονήσεως] 'Thought.' The word is used in a general sense as the substantive of φρονεῖν (cf. Eth. vii. xii. 5), and not in its technical sense as defined in (the Eudemian) Book vii. τιμῆς δὲ—ἀγαθᾶ] 'Now honour, thought, pleasure, exhibit distinct and differing laws when viewed as goods.' The same instances are given below, i. vii. 5. of goods sought for their own sake. Obviously here Aristotle is not doing full justice by the question he has started. What are the 'different laws' of good in these objects, calls for
12 οὖν ἔστιν ἄρα τὸ ἀγαθὸν κοινὸν τι κατὰ μίαν ἴδιαν. ἀλλὰ τῶν δὴ λέγεται; οὐ γὰρ ἔοικε τοῖς γε ἀπὸ τοῦ χάριτος ὁμοιωμένων. ἀλλ’ ἄρα γε τὸ ἀφ’ ἐνὸς εἶναι, ἢ πρὸς ἐν ἄπαντα συντελεῖν, ἢ μᾶλλον κατ’ ἀναλογίαν; ὡς γὰρ εἰ σάμιατι
13 ὅψεις, ἐν ψυχῇ νοῦς, καὶ ἄλλο δὴ ἐν ἄλλῳ. ἀλλ’ ἴσως ταῦτα μὲν ἀφετέον τὸ νῦν· ἐξαρχήθην γὰρ ὑπὲρ αὐτῶν ἴλλης ἂν εἰνὶ φιλοσοφίας αἰκεῖότερον. ἅμοιος δὲ καὶ περὶ τῆς ἴδιας· εἰ γὰρ καὶ ἔστιν ἐν τῷ τοῦ καὶ καταγραφούμενον ἀγαθὸν ἡ χαρίστων τι αὐτὸ καὶ αὐτὸ, ὅλην ὡς οὖν ἂν εἰνὶ πρακτοῦν οὐδὲ κτητὸν ἀνθρώπων· νῦν δὲ τοιοῦτον τι ἐπιτει-14 ταί. τάχα δὲ τιν δόξειν ἂν βέλτιον εἶναι γνωρίζειν αὐτὸ πρὸς τὰ κτητὰ καὶ πρακτὰ τῶν ἄγαθῶν· οὖν γὰρ παράδειγμα τούτης ἡ κακάς μᾶλλον εἰσόμεθα καὶ τὰ ἡμῖν ἄγαθά, 15 κἄν εἴδομεν, ἐπιτευθομέθα αὐτῶν. πιθανότητα μὲν οὖν ἔχει τινὰ ὁ λόγος, ἐοικε δὲ ταῖς ἐπεισόδιμαι διαφωνεῖν· τάσιν γὰρ ἀγαθοῦ τινὸς ἐφιέμεναι καὶ τὸ ἐνδείκτι ἐπιτειτουρ-

a subtle investigation; whereas there is here a summary assertion. We might urge, on the other hand, that honour is not an instance of an absolute good (cf. i. v. 5), that pleasure and thought really exhibit the same law of good—as being both ἀνθρωπία. But Aristotle here partly trifles, and partly dogmatizes. He would, of course, refer us to metaphysics for the question in point.

11—12 οὖν ἔστιν—ἀναλογίαν
'Good, therefore, is not something generic under one idea. But how then is the term used? For it does not seem like an accidental coincidence of name. Shall we say then that it is so used because all goods spring from one source, or because they all tend to one end, or rather that it is on account of an analogy between them?' 'Oμάνας answers to 'equivocal' words in logic. The so-called 'Categories' of Aristotle begin 'Oμάνας λέγεται ἐν ὅσια μόνον κοινὸν. A nominalistic explanation of the general conception of good is here substituted provisionally for the realism of Plato.

13 ἀλλ’ ἰσίων—ζητοῦσαν] 'But perhaps we should dismiss these questions for the present, for to refine about them belongs more properly to another kind of philosophy. So too about the idea. Even if there is any one good universal and generic, or transcendental (καρπωτῶν) and absolute, it obviously can neither be realised nor possessed by man, whereas something of this latter kind is what we are inquiring after.' Cf. Eth. x. ii. 4. The whole force of the present chapter is contained in this sentence. The Idea is not πρακτὸν τι, and therefore does not belong to ethics. The concluding paragraphs of the chapter are occupied with proving that the Idea is not available even as a model (παράδειγμα) for practical life.

15 ἐνδείκτι] Cf. Pol. vii. xvii. 15: πάσα γὰρ τέχνη καὶ παθεῖα τὸ προ-
VI.—VII.] ΗΘΙΚΩΝ ΝΙΚΟΜΑΧΕΙΩΝ I. 443

σαί παραλείποντι τὴν γνώσιν αὐτοῦ. καὶ τοῦ βοήθημα τηλικοῦτον ἀπαντᾶς τοὺς τεχνίτας ἄγνοεῖν καὶ μηδ' ἐπιζήτηθεν τείν οὐκ εὐλογον. ἀρνον δὲ καὶ τι ὑπελεγήσεται ὑπάντησιν ὑπὲρ ὑποτείκτων πρὸς τὴν αὐτοῦ τέχνην εἰδῶς αὐτὸ τάγαθον, ἢ πῶς ἵσταρκέωτερος ἢ στρατηγικοῦτερος ἢ ἦσταν ὑπὸ τὴν ἴδεαν αὐτῆς τεθεαμένος. φαίνεται μὲν γὰρ οὔδε τὴν ὑγείαν ὦτονος ἐπισκοπεῖν διὰ τοῦτο, ἀλλὰ τὴν ἀνθρώπου, μάλλον δὲ ἵσταν τὴν τοῦτο. καὶ ἔκαστον γὰρ ἰσαρίζει καὶ περὶ μὲν τούτων ἐπὶ τοσοῦτον ἑιρήσεως.

Πάλιν δὲ ἐπανελθομεν ἐπὶ τὸ ζητομένου ἄγαθον, τί ποτ' ἂν εἶ. φαίνεται μὲν γὰρ ἀλλο ἐν ἄλλῃ πράξει καὶ

λείψον βοήθησαι τῆς φύσεως ἀπαντήσεως.

15—16 καὶ τοῦ—τεθεαμένος] 'And yet it is not likely that all artists should be ignorant of, and never so much as inquire after, so great an aid, if really existing. But it is hard to see in what a weaver or carpenter will be benefited with regard to their respective arts by knowing the absolute good; or how one is to become a better doctor or general by having contemplated the absolute Idea.' It has been objected that Aristotle fixes on too mean specimens of the arts, that he might have spoken differently if he had adduced the fine arts. But the question is, whether for practical life the Idea, that is, a knowledge of the absolute, could be made available? This forms a great point of divergence between Plato and Aristotle. The latter seems to regard the Idea as an object of the speculative reason alone, something metaphysical and standing apart; and between the speculative and practical powers of man he sets a gulf. Plato, on the other hand, speaking without this analytical clearness, seems to think of the idea as an object for the imagination, as well as the reason, as being an ideal as well as an idea. In this its many-sided character he would make it affect life, as well as knowledge; for by contemplation of it the mind would become conformed to it. Cf. Republic, vii., and see Essay III. p. 204.

VII. 1 πάλιν δὲ ἐπανελθόμεν—εἰ] 'But let us return to the good we are in search of, and ask what is its nature.' τὸ ζητομένον is emphatic; it distinguishes the πρακτὸν ἄγαθον of ethics, here 'sought for,' from the transcendental supreme good of metaphysics. Failing to obtain a satisfactory answer to his question, either from the common opinions of men, or from the philosophers, Aristotle starts anew, by asserting that though the conception of good may vary 'in each art and action,' yet it has this unvarying characteristic, that it is the 'end,' From this starting-point the argument easily comes round to the position already anticipated (μεταβαινόν δὲ τὸ λόγος εἰς ταύταν ἀδύνατο), that the πρακτὸν ἄγαθον is identical with the τέλος τέλεως, or end-in-itself of action, and with this basis, by a series of a priori principles, some already enunciated by Plato and others peculiar to his own system, Aristotle de-
velopes his conception of happiness or the chief good. (1) It is tēleion; (2) Also, it must be ἀδιάκριτης; (3) It must be found in the ἔργων of man. (4) This ἔργων is a rational and moral life; (5) We must conceive of it in actuality, in other words, as 'conscious life'; (6) We must add the condition of conformity to its own proper law; (7) And also the external condition of sufficient duration and prosperity.

Also αὔλος καὶ ἄλλος τὰ ἔργα. \('\text{As for instance, wealth,} \text{of man, and instruments in general.' Wealth is a mere means (cf. i. v. 8).} \)\text{Aúlos} seems a stock example with Aristotle of the instruments to an art. Cf. \textit{De Anima}, i. iii. 26, where he argues against the doctrine of the migration of souls, saying, you might as well speak of the carpenter’s art migrating into flutes: \textit{παραπλῆσιν} δὲ λέγουσι διότι εἰ τις φαίνη τὴν \textit{τεκτωνικὴν} εἰς αὖλον ἐνδόν τε. \(λέγω τὴν \text{μὲν τέχνην χρῆσαι τῶν ὁργά}

\text{νωσ, τῷ δὲ ψυχή τῷ σώματι. Cf. Xenophon, \textit{Econ.} i. 10, where Socrates says: ὃστερ γε αὖλος τῷ μὲν ἐπιστα-μένῳ ἄλλως λόγου αὖλειν χρῆματα ἐσο, τῷ δὲ μὴ ἐπισταμένῳ οὖθεν αὖλον ἅ ἐκτεμνοι λίθῳ, εἰ μὴ ἀποδειδήτο γε αὔλοι.}

\(4\) καὶ ἀπλῶς—ἄλλος. \('\text{And therefore we call that absolutely of the nature of an end which is desirable in and for itself always, and never in order to anything else.' The conception of ends was not fully developed in Plato; at the beginning of the second book of \textit{the Republic}, those are said to be the highest goods which are desired both for themselves and for their results (cf. Eth. i. vi. 10). Aristotle's conception of the practical chief good is that while it is solely an end, it yet sums up the results of all means. Hence he adds that it is not only τέλειον, but ἀδιάκριτης. These two}
qualities are attributed to the chief good in the Philebus of Plato, p. 20 c: τὴν τάγαδον μορόν πότερον ἀνάγκη τέλεον ή μὴ τέλεον εἶναι; πάνω δὲ τῶν τελεσθέντων, ὦ δὲ Ἑκάστεις. τί δὲ; ἵκανον τάγαδον; τῶν γὰρ ὅτι; κ.τ.λ.

6 τὸ δ᾽ αὐταρκεῖς—ἀδύνατον] 'We do not apply the term "self-sufficiency" only to the individual who leads a solitary life, but in reference to parents and children, and wife, and in general friends and fellow-citizens, since man is by nature social.' The Greek ὥστε αὐτὴν μόνην—ἄλλα καὶ γονεῖς, is defective in the grammar; the meaning apparently is, that αὐτάρκεια does not imply isolation.

7 τοῦτον δὲ—ἐπισκέπτεσθαι] 'But of these we must take some limit; for if one extends the circle to parents and descendants and the friends of a man's friends, it will go on to infinity. But this point we must consider hereafter.' Man, as a social being, having been represented as the centre of a circle, Aristotle adds we must fix some limit to this circle within which his αὐτάρκεια is to radiate. He promises to return to the question. Some think that this promise is fulfilled in c. xii. of this book, but perhaps Aristotle rather had in mind his intended discussions on Friendship (see e. ix.—xii.).

S ἦτα δὲ πάντων—ἀδέι] 'Moreover we think it (σὺνμέθα) the most desirable of all goods, provided it be not (μὴ) reckoned as one among them; but if it were so reckoned, it is plain that it would become more d
9 tovwn proktovn ovsva teled. all' ovsos t'hn m'wv eido-

with the addition of the slightest
good, for the addition constitutes
a preponderance of goods, and the
greater good is always the more de-
sirable.' This remark points out the
difference between the tudes kai
advarkes avagwv and any other thing
to which the word 'best' can ever be
applied. The all-comprehensive and
supreme good, happiness, is indeed
the best, but not as being really
placed on a level with other goods,
or ranked among them; not as
being 'best of the lot,' but as in-
cluding all the lot in itself, so that
beside it there is no good left that
could possibly be added to it. The
Paraphrase gives exactly this meaning
to the passage, rendering the word
svoraphimoswv by svostovjv toiv
alloi avagwv, kai ei svostovjv aavt'n
tov alloi svostomowv avagwv, phain-
ron ont, ei prosftmavjv t'ovn allo-

'The more numerous must be a
greater good than the fewer, if they
be placed in the same scale of com-
parison with it.' Eustratius takes the
passage to mean that 'happiness
would be the most desirable of all
things, even if not joined with other
good, though with any addition it
would be a fortiori better.' This con-
tradicts the very principle that Aris-
totle wished to establish, that 'best'
and 'most desirable' are to be applied
to the supreme good, not meaning that which merely as a fact is better than other things, but, ideally, that than which nothing can be better. Aristotle accepts from the Platonists the doctrine, that the chief good is incapable of addition. Cf. Eth. x. ii. 3.

II. πάτερον ὁδὶ τέκτονος κ.τ.λ. This argument—by which, from the analogy of the different trades, of the different animals, and of the separate parts of the body, the existence of a proper function for man is proved—comes almost verbatim from Plato’s Republic, i. 352—3. The ἔργον of anything Plato there defines as that which can alone or best be accomplished by the thing in question. Ἀριστο τοῦτο λίγο πρὸς καὶ ἄλλου ὑποτείνου ἔργον ὅ ἂν ἡ μόνη ἔκδοσι ποιητικὴν μέν ἔργα; Of course ἔργον in this sense is to be distinguished from such uses as in Eth. i. i. 2, where it means an ‘external result;’ iv. ii. 10, ‘a work of art;’ ii. ix. 2, ‘a labour,’ or ‘achievement.’

12. τὸ μὲν γὰρ [ὑπὲρ ἐχοντος] ‘Now mere life is shared even by the plants, whereas we are seeking something peculiar. We may set aside therefore the life of nutrition and growth, succeeding this will be a principle of life that may be called the perceptive; but this too appears shared by horse and ox and every animal. There remains then what may be called a moral life of the rational part. The argument here as to the proper function of man, and the division on which it is based, belongs entirely to the physiological and psychological system of Aristotle. See Essay V. p. 295. The meanings of the word πρακτικὸς are (1) with a genitive ‘able to do,’ or ‘disposed to do,’ as iv. iii. 27, διέγερσι πρακτικὸς, i. ix. 8, πρακτικὸς τῶν καλῶν. (2) ‘Active,’ ‘practical,’ opposed to quiescent or speculative, i. v. 4. Of δὲ χαράτες καὶ πρακτικὸς τιμήν, vi. viii. 2. (3) ‘Moral,’ as here, opposed to the life of animal instinct. Cf. vi. ii. 2, τῷ τα θηρια διεποθεῖα μὲν ἕχειν, πράξεως δὲ μὴ κοινωνείν. Or, as vi. iv. 2, vi. xii. 10, opposed to the artistic and the scientific.

13. τοῦτον δὲ—διακοψάμενον] With regard to the present passage, Bkierer exhibits no variation in the MSS., and the Paraphrast evidently had it in his text. All that can be said, therefore, is that the present sentence interrupts the sense and grammar of the
context, and that it is conspicuously awkward in a book which for the most part reads smoothly.

But further, since this life may be spoken of in two ways (either as an existing state or developed into actuality), we must assume it to be in actuality; for this seems the more distinctive form of the conception. nor is the opposition to κατά ἐνέργειαν. Cf. i. viii. 9.

14. We have here a fourfold protasis; εἰ δ' ἐστὶν ἐνέργον—τὸ δ' αὐτὸ φασιν ἐνέργον—ἀνθρώπου δὲ τίθεμεν—ἐξαιτεῖται τ' εὖ. The apodosis to all of these is εἰ δ' οὖν τὸ ἀνθρώπου ἀγαθόν, where γίνεται is used as denoting a deduction from premises, just as the future tense is often employed. Similar long-drawn arguments occur ii. vi. 9, iii. ν. 17, &c.

εἰ δ' ἐστιν—λόγου] 'Now if the proper function of man be vital action according to a law, or implying a law.' ψυχῆ, substituted for the previous term ἐστίν, denotes the entire principle of life, thought, and action, in man. The additional term κατὰ λόγον gives an equivalent to πράσινος, since the reason necessarily introduces a moral point of view into every part of life (cf. De Animā, πκ. 7). It is difficult to translate κατὰ λόγον, because the word λόγον is ambiguous. Partly it means reason, partly a law or standard (cf. Eth. ii. ii. 2). As compared with μὴ ἄνευ λόγου, κατὰ λόγον would express a marked, direct, and prominent control. In the ἐνέργης and the σώφρων, where the desires flow naturally to what is good, reason would seem rather to be presupposed (οὕτως ἄνευ) than directly to assert itself. The more significant expression, however, is that which follows, πράξεις μετὰ λόγου. A machine might be said to move κατὰ λόγον, 'in accordance with a law,' but not μετὰ λόγου, 'with a consciousness of a law.' It is this consciousness of the law, which, according to Hegel, distinguishes morality (Moralität) from mere propriety (Sittlichkeit). On the transition of meaning from κατὰ ἐνέργειαν to ἐνέργεια ψυχῆς, and on the translation of these terms, see Essay IV. p. 236, 242.
showing there is nothing illogical in doing so, that by taking a genus in its best form we do not go off into another genus.

15 [καθαρόν δ' ἐόν—ἀποτελεῖσθαι] 'And everything is well completed in accordance with its own proper excellence.' Cf. Eth. ii. vi. 2. This principle of the connexion between the proper function of a thing and the peculiar law of excellence of that thing is taken from Plato; cf. Repub. i. p. 353.

It is introduced here to justify the term καθ' ἀρετῇ in the definition of happiness. This term is not at once to be interpreted 'according to virtue,' which would destroy the logical sequence of the argument. It comes in at first 'in a general sense, 'according to the proper law of excellence in man,' whatever that may be.

εἰ δ' οὖσαι—τελειοτάτην] 'If so, I say, it results that the good for man is vital action according to the law of excellence; and if the excellences be more than one, according to that which is best and most absolutely in itself desirable.' Whatever awkwardness and strangeness there may appear in this attempt to render the definition of Aristotle, it will be found on consideration to approach, at all events, nearer to his meaning than the usual rendering: 'an energy of the soul, according to virtue,' &c.

16 ἐν δ' ἐν βίῳ—χρόνος] 'But we must add also "in a complete period and sphere of circumstances." For one swallow does not make a summer, nor does one day; and so neither one day nor a brief time constitutes a man blest and happy.' Βίος, the external form and condition of life, implies both fortunes and duration. By adding this last consideration, Aristotle gives a practical aspect to his definition. Ideally, a moment of consciousness might be called the highest good, independent of space and time, τέλειος, as we have seen above (§ 4), means 'that which is of the nature of an end,' 'that which is desirable for its own sake.' But no doubt the popular sense of the word comes in to some degree in the present passage; partly Aristotle had before his mind the conception of a 'complete' or 'perfect' duration of life, partly of an external history and career that could be designated as 'desirable for its own sake.'
σὴν δὲ καὶ τῶν προειρημένων χρῆ, καὶ τὴν ἀκριβείαν μὴ ὀμοίως ἐν ἄπασιν ἐπιστήμην, ἀλλ' ἐν ἑκάστοις κατὰ τὴν ὑποκείμενην ὕλην καὶ ἐπὶ τοσούτων ἐφ' ὅσον οἰκεῖον τῇ 19 μεθόδῳ. καὶ γὰρ τέκτων καὶ γεωμέτρης διαφέροντως ἐπιζητούσι τὴν ὀρθήν. ὅ μὲν γὰρ ἐφ' ὅσον χρησίμη πρὸς τὸ ἔργον, ὁ δὲ τὶ ἐστὶν ἐν ποῖν τι· θεατὴς γὰρ τἀληθεύως. τῶν αὐτῶν δὴ τρόπων καὶ ἐν τοῖς ἄλλοις ποιητέων, ὅπως μὴ 20 τὰ πάροργα τῶν ἐργῶν πλείω γλυκνται. οὐκ ἀπαιτητέων ὁ οὐδὲ τὴν αὐτίκαν ἐν ἄπασιν ὀμοίως, ἀλλ' ἰκανόν ἐν τοῖς τῶν δεικτῆς καλοῖς, ὅνων καὶ περὶ τὰς ἀρχὰς τὸν δ' ὅτι cognate ἀκριβεία, has different shades of meaning which may be here specified. (1) 'Minuteness of details.' Cf. Plato, Repub. iii. 414 A, ἕντον τόν οὐσίαν, μὴ δ' ἀκριβείας. Eth. ii. vii. 5. (2) 'Mathematical exactness,' which implies every link of argument being stated, and the whole resting on demonstrative grounds. Cf. Metaph. α' ἐκαστον, iii. 2. Eth. vii. iii. 3. (3) 'Definiteness,' or 'fixity.' Cf. viii. vii. 5. 'Ἀκριβῆ ὅποι οὕτως ἀρματικός,' ii. 4. 'Ὁ λόγος ὅποι ἐχεῖ τἀκριβῆς, answering to ἑσπρός, ix. ii. 2. iii. iii. 8. (4) Applied to the arts it denotes 'finish.' Cf. i. iii. i. ii. vi. 9. vii. vii. 1. (5) By a slight transition from the last, when applied to sciences, it means also 'metaphysical subtlety.' This transition is made vii. vii. 2: cf. x. iv. 3; De Animâ, i. 1. i. In the passage before us ἀκριβεία seems to combine several of the above-mentioned meanings. It seems to say that mathematical exactness is not suited to ethics—that too much subtlety is not to be expected (καὶ γὰρ τέκτων καὶ γεωμέτρης, π. τ. λ.)—that too much detail is to be avoided (ὡς μὴ τὰ πάροργα, κ. τ. λ.).

οὐκ—ἀρχῆ] *Nor must we demand the cause in all things equally, —in some things it is sufficient that the fact be well established, as is the case with first principles. Now the
fact constitutes a first point and principle. The bearing of this somewhat obscure sentence seems to be to repeat the remark made, 1. iv. 6—7, that in morals a fact appealing to the individual consciousness has a paramount validity. Just as in the other sciences we do not ask the why and wherefore of the axioms, so in morals we accept the facts because we feel them without their being demonstrated. Cf. Eth. vi. viii. 9.

21 τῶν ἀρχῶν δ᾽ — ὑπόθεσα] 'But of principles some are apprehended by induction, others by intuition, others by a sort of habituation of the mind, and, in short, different principles in different ways. But we must endeavour to attain each in the natural way, and we must take all pains to have them rightly defined, for they are of great importance for the consequences drawn from them.' This digression seems partly suggested by the immediately preceding paragraph on the relation of facts in morals to principles of science, partly it belongs in general to this part of the subject. Aristotle, having laid down his ground-principle of ethics, makes a pause, in which some remarks are introduced on principles, their importance, and the method of attaining them. The words καὶ ἄλλας δ᾽ ἄλλας show that the list of methods is not meant to be exhaustive. The commentators, misunderstanding the Greek, have inquired by what ‘other methods other principles’ could be sought? But, of course, these words only generalize the whole proposition (cf. Eth. i. iv. 3, ἄλλας δ᾽ ἄλλας).

ὡς προσορυγοῦντα] 'are perceived;' cf. vii. iii. 2, vii. iii. 5. Answering to μετέτεινοι we have the term ἑρμήσεων ἀρχάς, Prior Analytics, 1. xxx. 2. With ἂ προσορυγοῦσι we must understand a passive infinitive, 'in the way in which they are meant by nature to be reached.' As to the method of obtaining principles, cf. Prior Analytics, 1. xxx. 1, where the study of nature and of facts is pointed out as the only source of ἀρχαὶ or universal premises. 'Ἡ μὲν οὖν ὅσι κατὰ πάντων ἡ αὐτὴ καὶ περὶ φιλοσοφικῶν καὶ περὶ τέχνην ὑποικούν καὶ μάθημα· δεὶ γὰρ τὰ ὑπάρχοντα καὶ οὐ ὑπάρχει περὶ ἕκαστον ἀρχῶν.—Διὸ τὰς μὲν ἀρχὰς τὰς περὶ ἕκαστον ἐμπερίας ἄστι παραδοῦναι. Connecting then the recognition of ἀρχῶν with the knowledge of facts, we see that (1) ἐπαγωγὴ is the evolution of a general law out of particular facts, (2) ἀλήθεια is the recognition of the law in the fact. Ἀλήθεια is not to be restricted to the perception of the senses, or confined (as the Paraphrase would have it) to the physical sciences. Rather it is opposed to ἐπαγωγή, as intuition to inference. Cf. Eth. vi. xi. 5, τοῦτον ὅσι ἴσος ἕκαστον ἀλήθεια, μετέτεις δ᾽ ἄστι νοῦς. (3) ἑρμήσις is a sort of unconscious induction, a process by which general truth said to grow up in the this process peculiar
alone: it is a question whether even
the truths of number do not derive
part of their validity as necessary
axioms from their frequent repetition.
See Mill's Logic, book ii. ch. v.

VIII. We now enter upon a fresh
division of the Book. From hence to
the end of Chapter 12th Aristotle
tests his great ethical principle, his
definition of the chief good, by com-
paring it with various popular or
philosophic opinions, and by applying
to it certain commonly mooted ques-
tions and distinctions of the day.

1 σκεπτών δὴ—τάληθες] 'We
must consider it (i.e. the first prin-
iple) therefore not only from the point
of view of our own conclusion and
premises, but also from that of say-
ings on the subject. For what is
ture all experience coincides, with
what is false the truth quickly shows
a discrepancy.'

περὶ αὐτῆς] especially with δὴ, can
only be referred to ἡ ἄρχη in the pre-
ceding line. This is a general
doctrine of science, though Aristotle im-
mediately exemplifies it with regard
to his definition of happiness.

εἷς δὲ] is compressed for εἷς δικελων
εἷς δὲν. The clause τῷ μὲν—τάληθες
contains an indistinctness and a diffi-
culty overlooked by the commen-
tators. For they content themselves
with explaining that 'truth in the
thought is identical with existence in
the thing.' "Ο γὰρ ἐν τῷ λόγῳ τὸ
ἀληθὲς, τούτο ἡ ἀρχή εἰς τῷ πράγματι
ὅταν οὐκ ἡ ὑπάρχουσα τῷ πράγματι
ἀποκαλοῦσθαι τὰς περὶ αὐτῶν λεγομένων,
διὸν ἀν εἰ, δι’ ἀληθῆς ὁ λόγος
(Euistrius). The difficulty is, that
Aristotle is not talking of comparing
theory with facts, but his own theory
with the theories of others. Τὰ ὑπά-
ρχουσα, however, cannot exactly mean
"opinions" or "theories." It is plain
that there is some confusion in the
expressions used, which is increased
by the word τάληθες in the second
part of the sentence answering to τὰ
ὑπάρχουσα in the first. There is here
a mixing up of the objective and the
subjective sides of knowledge. Our
word 'experience' may perhaps serve
to represent τὰ ὑπάρχουσα, meaning
neither 'facts' nor 'opinions,' but facts
as represented in opinions. In the
same way τάληθες is not simply the
true fact, nor the true theory, but
'the truth,' that is, fact embodied in
theory. τὰ ὑπάρχουσα would usually
mean the natural attributes of a thing,
1. xxx. 1 (quoted above). Eth. 1. x. 7.

2 γενεμένων—ἀγαθὰ] 'To apply
our principle (δὴ), goods have been di-
vided into three kinds, the one kind
being called external goods, and the
others goods of the mind and body;
and we call those that have to do with
the mind most distinetively and most
especially goods.' This classification
described happiness pretty much as a kind of well-living and well-doing.

5 φαίνεται δὲ—λέγεται] Moreover over the various theories of what is requisite with regard to happiness seem all included in the definition. There is a sort of mixed construction here, ἐνεπχομένων being used in a doubtful sense. The meanings of the word ἐπιστήμη are: (1) to ‘require’ or ‘demand,’ viii. xiv. 3, τὸ δυνατὸν ἑφίλα ἐπιστήμης; (2) to ‘search after,’ i. vi. 15, ἀγνώσας καὶ μὴ ἐπιστήμης: (3) to ‘examine’ or ‘investigate,’ i. vii. 19, ἐπισκέψεως τὴν ὀρθήν, vii. i. 6: (4) to ‘question,’ like ἀνωτέρω, ix. vii. 1. In the passage before us, τὰ ἐπιστήμην partly means ‘the things demanded, or thought requisite;’ partly, as going with περὶ τὴν εὐδαιμονίαν, ‘the discussions or investigations on the subject of happiness.’ The words δὲ καὶ mark a transition from considering the merely popular opinions, to the more philosophic ‘investigations’ of the subject.

6 τοῖς μὲν γὰρ—συμπαραλλαγήνωσιν] As we learn from the next section, Aristotle is rather running over the chief heads of opinion than giving any accurate classification of the different schools of philosophy. The opinion that identified happiness with virtue may perhaps be attributed to the Cynics; with practical (φρόνησις) to Socrates; with phy (νοσία) to Anaxagoras (cf
That it consisted in these things or one of these, with pleasure added or implied, is the doctrine asserted by Plato in the *Philebus*. That ‘favourable external conditions’ must be included, seems to have been the opinion of Xenocrates, who attributed to such external things a *δόμαμεν ἐπιρροή*. See Essay III. p. 218.

7 τούτων δὲ—κατορθωτά Many MSS. omit ἢ καί, leaving the sentence οὕτως δὲ τούτων ἐδήλωσα διαμαρτάνα τοις δολοῖς, ἀλλὰ ἐν γέ τι τὰ πλείστα κατορθωτά, for which Dr. Cardwell suggests the emendation κατορθωτάς. ‘It is not likely that either class should be altogether at fault, but only in some particular point, their general conclusions being correct.’ This is confirmed by the interpretation of the Paraphrast: ἐν οὕτως δὲ έδήλωσα διαμαρτάνα τοις δολοῖς, ἀλλὰ καθ’ ἐν τι τῶν ἑπλοπίᾳς, ἐν τοῖς πλείστοις δὲ ἔλεγχοις. But the text, as it stands above, gives a sense most in accordance with what Aristotle would be likely to say. ‘Now some of these are opinions held by many, and from ancient times; others by a few illustrious men; but it is not probable that either class should be utterly wrong, rather that, in some point at least, if not in most of their conclusions, that they should be right.’

8 sqq. Aristotle now proceeds to show his own coincidence with these pre-existent theories. It is to be observed that he says nothing here in reference to those who made happiness to consist in ‘thought,’ or ‘a sort of philosophy.’ This is one of the marks of systematic method in the *Ethics*. He will not anticipate the relation of φύσις and φάσις to ἐνεργεία. The rest of the argument is very simple. (1) The definition of happiness, ‘vital action under the law of virtue,’ agrees with, includes, and improves upon the definition that says ‘virtue is happiness.’ For it substitutes the evocation, employment, and conscious development of virtue, for the same as a mere possession or latent quality. (2) Such a life implies pleasure necessarily and essentially (καθ’ ἀφθονίαν ἠδυί); for pleasure, being part of our consciousness (τοις μέν γάρ ἡδονά τῶν φυσικῶν, cf. *Eth. x. iii. 6*), necessarily attaches to all that we are fond of, or devoted to, or that we follow as a pursuit (ἐκάστῳ δ’ ἠδυίν ἡδεῖ πρὸς δ’ ἠλέγχει φιλοσοφίας, cf. *Eth. ii. iii. i—3*), and thus will arise out of a life of virtue to him that pursues such a life. He will experience a harmony of pleasures unknown to others (τοις φιλοσόφοις ἡδεῖν ἠδυία ἡδεῖν ἡδεῖα). Hence we may supersede the addition proposed by some philosophers of μέν ἠδονής to the conception of happiness. Our conception, says Aristotle, needs no such adjunct ‘to be tied on like an amulet.’ (3) He accepts the requirements of Xenocrates. External prosperity is a condition without which happiness
cannot practically exist, though it is not to be confounded with happiness.

τὴν ἄρετὴν ἢ ἄρετὴν τινα συνοδίας ἐστὶν ὁ λόγος· ταύτης γὰρ ἐστὶν ἢ κατ᾽ αὐτὴν ἐνεργεία. Διαφέρει δὲ ἵσας ὦ δὲ λοιπὸν ἐν κτῆσι πρὸς ἥρπος τοῦ ἀριστοῦ ὑπολαμβάνειν, καὶ ἐν ἐξει ἢ ἐνεργεία. τὴν μὲν γὰρ ἐξει ἐνδεχεται μὴ δέν ἀγαθὸν ἀποτελεῖν ὑπάρχουσαν, οἷον τῷ καθευδώντες ἢ καὶ ἄλλως πασς ἐξηγηματικός· τὴν δὲ ἐνεργείαν ὅχι ἂν τε πράξει γὰρ ἐξ ἀνάγκης, καὶ εὐ πράξει. ὡσπερ ἐν Ὀλυμπίασιν ὧν οἱ καλλιστεῖς καὶ ἵσαράται στεφάνωνται ἀλλ᾽ οἱ ἄγωνιζόμενοι (τούτων γὰρ τινες νικῶσιν), ὡστε καὶ τῶν ἐν τῷ ἀθικῷ καλῶν καγαθῶν οἱ πράπτοντες ἄρθης ἐπηθεραλούνται· ἔστι δὲ καὶ ὁ βίος αὐτῶν καὶ ἀυτῶν ἡδος. τὸ τοῦ μὲν γὰρ ἴδεσθαι τῶν ψυχικῶν, ἐκάστῳ δὲ ἐστὶν ἡδον πρὸς ὃ λέγεται φιλοτιμίατος, οἷον ισός μὲν τῷ καλῶτι, θέμα δὲ τῷ φιλοσέφοι: τῶν αὐτῶν δὲ τρόπων καὶ τὰ ὄνται τῷ προφανείᾳ καὶ ἄλλα τὰ κατ᾽ ἄρετὴν τῷ καλῷ. τοῖς δὲ φαινομένοις ἐστὶν ἡδος μακρεῖα διὰ τὸ μη ἑστῆκαν τοιαῦτα εἶναι, τοῖς δὲ παλαιότεροι ἡδος διά τὸ μη θυσίας τοιαῦτα εἶναι.
iv. 4. it means one with a noble spirit: τὸν φιλότηταν ἐκνομήμενον ὡς ἀνθρώπον καὶ φιλόσοφον. φθεῖν ἱδέα denotes partly things that are, ought to be, and must be pleasures, according to the eternal fitness of things, in accordance with the whole frame of the world; cf. φθεῖν Βουλγρίνα, Εἴθ. iii. iv. 3; partly, pleasures which are in accordance with the nature of the individual,—his natural state,—his highest condition; cf. νί. xiv. 7. φθεῖν ἱδέα δὲ τοιεῖ πράξεως τῆς ταύτης φθείρας, 'Things are naturally pleasant which produce an operation of any given nature' (viewed as a whole): νιν. xi. 4. γένεσις εἰς φθεῖραν ἀποθετή, 'a perceptible transition into one's natural state.' On the various meanings of φθεῖρα, see below, Εἴθ. ii. i. 3, note.

12 ἐπερ περίσσειν τινὸς] 'Like an amulet to be tied on.' Cf. Plutarch, Vit. Periel. § 38: ὁ Θεόφραστος ἐν τοῖς ἡμικοῖς διαφοράς εἰ πρὸς τὰς τόχας τρέπεται ἡ θήλῃ. — ἱστορίης, δημοσίων τοῦ Περικλῆς ἐπισκοπομένων τοῖς τῶν φιλῶν διδασκειν περιστάτου ἐν τῶν γυναικῶν τῆς ἀρετῆς καὶ ἰδιωτικῆς ἐνυδαμομον. Cf. also Plato, Repub. i. 426 b, ἡ ἡ ἐκ πρώτης ἡ ἐνυδαμομον, κ.τ.λ. ὁ δὲ ἐκτιμῶν ἄγαθον ὡς χαλεπον] This anticipates Εἴθ. ii. iii. 1, where it is said that pleasure is the test of a ἥς being formed.

14 κατὰ τὸ Δηλικαῖον ἐπίγραμμα] The Eudemian Ethics commences by quoting this inscription, rather more circumlocution being used than here. οὐ μὲν ἐν Δήλῳ παρὰ τῷ θεῷ σὺν αὐτῷ γνῶσι ἀποφθέγματος συνεργαφαὶ ἐπὶ τὸ πρόπλασον τοῦ Δηλίου, κ.τ.λ. The last line, as there given, stands πᾶσιν δὲ ἱδιοτος, οὐ τί ἐρᾷ τὸ τιχιν. The verses also occur among the remains of Theognis, and the same sentiment in iambics is found in a fragment of the Creuses of Sophocles, Stobaeus Serm.
III.—IX.] ΘΕΙΚΩΝ ΝΙΚΟΛΑΕΩΝ I.

μονίαν. φαίνεται δ’ ὤμος καὶ τῶν ἐκτὸς ἄγαθῶν προσδέδω—15
ομένι, καθάπερ εἰπομεν, ἀδύνατον γὰρ ἢ οὗ ἰδίῳν τὰ
καλὰ πράττειν ἀνορθήγητον ἐντα. πολλὰ μὲν γὰρ πράττε
ται, καθάπερ δʼ ἀργάνων, διὰ φίλων καὶ πλούτου καὶ
πολιτικῆς δυνάμεως· ἐνίοι δὲ τητόμενοι ὑπαίτωσι τὸ 16
μακάριον, οἷον εὐγενείας εὐτεκνίας κάλλους· οὗ πάνω γὰρ
εὐδαιμονικὸν ὢ τὴν ἱδέαν παναὐξήχης ἡ δυσγενὴς ἡ ἐμφάνιας
καὶ ἄτεκνος, ἔτι δʼ ἰσος ἦτον, εἰ τῷ πάγκακοι παῖδες εἶνε
ἡ φίλοι, ἡ ἄγαθοι ὄντες τευκρίσιν. καθάπερ οὖν εἰπομεν, 17
ἐνίοις προσδιέται καὶ τῆς τωχοῦτος εὐπρεψίας· ὅθεν εἰς
ταῦτα τάπτουσιν ἐνίοι τὴν εὐτυχίαν τῷ εὐδαιμονίᾳ, ἐτεροὶ
τῷ τὴν ἄρετὴν.

"Ὅθεν καὶ ἀπορεῖται πότερον ἐστὶ μακάριον ἡ ἐνίστοτι 9
ἡ ἄλλος πως ἄσκητον, ἡ κατὰ τινὰ θέλαν μοίραν ἡ καὶ
dia τύχην παραγίνεται. εἰ μὲν αὕτω καὶ ἄλλο τι ἐστὶ·

C. P. 15. This classification of goods—that 'justice is most beautiful, health
best, and success sweetest,' belongs to the era of proverbia! philosophy in
Greece; see Essay II. p. 101.

15 ἀνορθήγητον ἐντα] We should say, by analogous metaphors, 'Unless
sufficiently furnished' or 'equipped.'
Cf. iv. ii. 20.

πολλὰ μὲν γὰρ—τευκρίσιν] Cf. Rheticor, 1. v. 4, εἰ δη ἔστεν ἡ εὐδαι
μορια των τοῦ, ἀνάγκης αὐτῆς ἐίναι μέρη
εὐγενείας, πολυφράσμα, χρυσαφελίας,
πλοῦτος, εὐτεκνίας, πολυτεκνίας,
ἐκατέρω, ἐκ τῶν νόμων ἄρετας, ὃν
ἐνδέχεται κάλλος ἑξέχειν πόλεμοιν
ἀγνωστικήν, δόξαν, τιμήν, εὐνοίαν,
ἄρετήν· οὕτω γὰρ ἐν οὐτουργίαν ἐσθ,
ἐι υπάρχῃ αὐτῇ τῷ τ' ἐν αὐτῷ καὶ τῷ
ἐκάθω ἀγάθῳ· ὅ γάρ ἐστὶν ἐλλα παρὰ
tαῦτα. The expression in the Rheticor—'parts of happiness,' is equiva
lent to 'instruments' of happiness, the more accurate designation in the
present passage.

17 καθάπερ οὖν—ἄρετήν] 'As we
have said then, it seems to require the
addition of such external prosperity.
Hence some identify good fortune with
happiness, as another class of philosop
hers do virtue.' The Cyrenaics and Cynics
appear to be alluded to here. Aristotle's doctrine contains
and gives a deeper expression to all
that is true in both of the two views,

IX. 1 ὅθεν—παραγίνεται] 'Whence
also the question is raised whether
it (happiness) is to be attained by
learning, or habit, or any other kind
of practice; or whether it comes by
some divine providence, or lastly by
chance.' The word ὅθεν expresses the
thread of connexion, by which this
new subject of discussion is intro
duced. Since happiness seems to be
a balance of two principles, an internal
one, virtue, and an external one, cir
cumstances, the question arises whe
ther it is attainable by the individual
through any prescribed means, or
whether it is beyond his control. It
seems chiefly, however, to be upon
the word ἄρετην that Aristotle goes
off. The question of the day, πότερον μαθητὴν ἡ ἀρετή, comes before him on mentioning that some identify happiness with virtue. Thus he says, not quite distinctly, ‘It is questioned whether happiness can be learnt.’ The question forms an important point at issue in the ethical systems of Aristotle and of Plato. The conclusion of Aristotle is directly opposed to that which is somewhat tentatively stated at the end of the Meno (99 e): ἡ ἀρετὴ ἐν ἐινῷ ἀντανεκρινθεὶς ἀντανεκρινθεὶς, ἀλλὰ θεῷ μοιρὰ τιμητικὴν ἄνω γιόν, ἢ τὸ παραγγειλθαι. 2—3 εἰ μὴν οὖν—ἐίναι] ‘Now it must be confessed that if anything else at all is a gift of gods to men, it seems reasonable that happiness too should be the gift of God, especially as it is the best of human things. But this exact point perhaps would more properly belong to another enquiry; at all events, if happiness is not sent by God, but comes by means of virtue, through some sort of learning or practice, it appears to be one of the divinest things.’ We have here a characteristic exhibition of Aristotle’s way of dealing with questions of the kind. We may observe: (1) His acknowledgment and admission of the religious point of view, and the priviē fœcio ground for the inter-

ference of Providence in this case if in any others. (2) His strict maintenance of the separate spheres of the sciences. A theological question cannot belong to ethics. (3) His manner of dismissing the subject. ‘Happiness, if not given by God, is at all events divine’ (cf. Eth. x. viii. 13)—by which expression he alters the view, giving it a Pantheistic instead of a Theistic tendency. (4) His immediate return to the natural and practical mode of thought.

4 εἰ ἢ δ’ ἂν πολύκοιτον—ἐπιμελεῖα] This is an addition to the preceding epithets of happiness. ‘Not only is it something divine and blessed,’ as being ‘the crown and end of virtue,’ but also ‘it must be widely common property, for it may be possessed—through a certain course of learning and care—by all who are not incapacitated for excellence.’ As it stands, this last clause is a petitio principii. Afterwards, however, the assumption is justified by arguments in its support both from reason and experience, Aristotle insisted much less than Plato on the innate difference between man and man, and approaches much more nearly to the mechanical and sophistical view, ἀνθρώπων ἀνθρώπων οὐ πολύ διαφέρει.
argument, which is stated in rather a complex way, seems as follows:—‘If it were better that happiness should be attainable by certain definite means, we may conclude that it is so (because in nature, art, and every kind of causation, especially in what is higher, things are regulated in the best possible way). But it is better, because the contrary supposition (namely, that the chief good should depend on chance) is simply absurd and inconceivable.’ It is an a priori argument, based on a sort of natural optimism, on a belief in the fitness of things. We find a similar classification of causes into nature, chance, and human skill, Eth. iii. iii. 7, where however necessity is added. Cf. vi. iv. 4. The δύναμιν αὐτίκα here meant seems to be virtue. Cf. Eth. ii. vi. 9, and De Juv. et Sen. iv. 1: κατὰ δὲ τῶν λόγων, ἵνα τὴν φύσιν ἄνωθεν ἐν πάσιν ἐκ τῶν δυνάμεων ποιούσιν τὸ καλλίστον.

7—11 The succeeding arguments may be briefly summed up. (2) He appeals to his definition of the chief good, that it is a certain ‘development and awakening of the consciousness under the law of virtue, and with certain necessary or favourable external conditions.’ This definition obviously implies the contradictory of any theory making happiness merely and entirely a contingency or chance. (3) Since the chief good is the end of politics, whose main business it is to educate and improve the citizens—this shows that education is the recognised means of happiness. (4) Animals are not called happy, because they are incapable of the above-mentioned action of the moral consciousness. (5) The same applies to boys, whose age renders them incapable of that which has real moral worth. At this point Aristotle adds that happiness requires absolute virtue, and a completed round of life (ἀρετής τελείας καὶ βίου τελείου), and he goes off into a new train of thoughts on the uncertainty of human affairs, by which he is brought into contact with the paradox of Solon.
to chance and circumstances, which admits of being improved or impaired.

ομολογομέναι—τοῖς ἐν ἀρχῇ. 'In agreement with what we said at starting.' Cf. x. vii. 2: 'Ομολογομενον 
δὲ ταῦτα Ἰν δέχεται εἰκα καὶ τοῖς πρὸτεροι καὶ τῷ ἄλλῳ.

10 οὖν τοῦτον μακαριζομέναι] In Politics, i. chap. xiii., it is discussed, from a more external point of view, whether boys are capable of the same virtue in a household as men. To which the conclusion is 'Επει 8 ὁ πολύς ἄγελθης, δήλον διὶ τούτων μὲν καὶ ἡ ἄρρητος ὅποι αὐτὸν πρὸς αὐτὸν ἄστις, ἂλλα ἀπὸ τὸν τέλεσθαι καὶ τὸν ἔργον (§ 11). The boys' good qualities have not an independent existence; they only give the promise of much. The sentiment ἀνθρώπων μακαριζομέναι is neatly expressed by Cicero de Rep. (quoted by Servius on Ἕμν. vi. 877): 'Ο Fannio, difficiles causa laudare puerum: non enim res laudanda, sed spes est.'

11 εὐθυράντα] alter εὐθυνοῦτα. Cf. Ἐθελ. i. 3. εὐθυνὰ ὑπημāτων καὶ σωμάτων, where also there is the variation εὐθύνα.

ἐν τοῖς ἥρωισι] alter ἤρωιοι. Dr. Crawford quotes Bentley, who, upon Callimachus, fragm. 208, pronounces that ἀρόε is a false reading for ἁρώς. Τὰ ἥρωικα means 'the heroic legends.'

X. The mention of βίος τέλεος and of the Πραιτωκαῖ τόχοι brings Aristotle now to consider the famous paradox of Solon, that 'no one can be called happy as long as he lives.' The discussion of this question is valuable not only for its own sake as a criticism upon the old saying, but as introducing a practical consideration of happiness, and tending to settle the relation to it of outward circumstances. Other points of interest are mooted rather than set at rest.

1 Πότερον οὖν—ἀποθάνει] 'Must we extend this farther, and call no man
whatever happy as long as he lives, but, according to Solon’s saying, look to the end? And, if we must allow this opinion, can we say that a man is happy after he is dead? τέλος is here used, not in the technical Aristotelian sense, but after the common usage, as in the Solonian proverb itself. There were two ways in which this proverb might be understood. It might express: (1) That a man is positively happy after death. (2) That negatively he now attains happiness, that is, safety from change; and thus may be retrospectively congratulated.

η τοῦτο γε—εὐδαιμονίαν] ‘Nay, surely this (the first position) is altogether absurd, especially to us who define happiness to be a kind of actuality.’

3 ξεῖ μὲν—τινα] ‘Still even this (second way of putting it) is open to some difficulty.’ It seems not so sure that the dead is safe and clear from the changes and chances of the world,—for may he not be affected by the fortunes of his posterity?

δεικτὶ γὰρ εἰπαί τι τῷ τενεωτί καὶ κακόν καὶ ἀγαθόν, εἰπερ καὶ τῷ ζωτί μη αἰσθανομένῳ δὲ] This is the reading of all Bekker’s MSS.; but the rendering of the Paraphrast is at variance with it, and seems to imply a reading of καὶ instead of μη. His words are: τάλαν δὲ οὐχ ἀρκεῖ ἃ λέγεω δι᾿ οὗ. ‘Aporia γὰρ ἓστιν ὑπ’ ὑμιν, εἰ λέγομεν εἰπαί τι τῷ τενεωτί καὶ κακόν καὶ ἀγαθόν, καὶ αἰσθανομένῳ δὲ, ἐπερ καὶ τῷ ζωτί. ‘For it is thought that the dead has, ay and feels too, both good and evil, just as much as the living.’ If the common reading be retained, we must suppose Aristotle first to have stated in the mildest form the popular belief that the happiness of the dead is connected with the fortunes of his family, and afterwards (ἀποφον δὲ καὶ τῷ μηδὲν) to have expressed this more strongly. In that case, he here seems to say that ordinary opinion ascribes happiness and misery to the dead in a figure, that is, with reference to our idea of their happiness and misery; just as good and evil may be ascribed to the living, who are unconscious of them.

4 τῷ γὰρ—κατὰ λέγομ] ‘For to him who has lived in felicity till old
age, and died accordingly,' καὶ λόγον, 'in the same ratio,' cf. below, § 15.
δὲν δὲ—ἐνδέκτα] 'And it is plain that in their respective degrees of removal (τοῖς ἀποστάσεις) the descendants may stand in an infinite variety of relationships to their ancestors.' Ἠγοῦν apparently answer to the διὰ ἀπόγονοι in the preceding section. The Paraphrase omits the sentence. The Scholiast gives τοῖς γονέων ἀπόγονναι ἀπολύων πολυλείον ἔλειν καὶ τοιχὶλαν ἀναγκαίων οὖν.

5 ἀπότομον δὴ—γονεῖσιν] 'It would be absurd, therefore, if the dead should change in sympathy with them, and become at one time happy, and then again wretched. But it would be absurd also that the fortunes of the descendants should affect the ancestors in nothing, and not for some time at least,' i.e. after death. The second part of this sentence, pronounced so strongly as it is, seems to contradict what one would have supposed to be Aristotle's philosophical creed. But he is here speaking from the popular point of view, and states strongly the two sides of the difficulty that presents itself. For the nonce he accepts the common belief on the subject (cf. i. xi. 1. i. xi. 6), but modifies it so as to leave it unimportant. On the apparently indeterminate views on the question of a future life, held by Aristotle, see Vol. I. Essay V. p. 299, sqq.

6 'But let us return to the former difficulty, for perhaps the clue to our present question also may be discovered from it.' τὸ πρῶτον ἀπορηθέν σὲ not a very accurate expression. Ἑλ/ Aristotle, when he stated the question now reverted to, εἰ δὲ τὸ τέλος ὅραν, gave it two meanings, and showed the impossibility of holding the first, and the difficulty that attached even to the second. He now says 'let us go back to the former difficulty.' What he means, however, is clear enough. He means to say, 'may we not after all set aside the caution of Solon in whatever way it is stated? May we not predicate happiness in the present as well as retrospectively? By settling the question as far as the present life goes, we may perhaps get some light as to the security or insecurity of the dead.'

7 τὰς δὲ τὰχας πολλάκες ἀνακολούθατι περί τοῦ ἀπότομον] 'And be-
cause fortune makes many revolutions around the same individuals. Various expressions of this sentiment are quoted from the Classics. The most beautiful is that which occurs in Soph. Trachiniae, 127, ἀλλ' ἐπὶ πῆμα καὶ χαρά Πῶς κυκλοῦσιν, οἷς ἄρα στροφάδες κέλευον.

8 χαμαίλοντα—καὶ σαθρών ἰδρυμένοι] It has been remarked that these words form an iambic line, probably quoted from some play.

9 ἦ τὸ μὲν—ἐναντίον] Rather, to follow chances is altogether a mistake, for good or evil resides not in these, but human life, as we have said, requires them as an external condition; while what determines happiness is the rightly regulated mental consciousness, and vice versa.

10 ἐν μέσῳ δὲ τῷ λόγῳ καὶ τῷ νῦν διαπορθέν] And even the present difficulty witnesses to our theory, i.e. the difficulty felt in predicating happiness, except retrospectively, betrays a latent sense that happiness must be regarded as something more stable than the fluctuations of fortune. Aristotle finds out that this more stable essence is to be found in his own conception of happiness, since he has placed it in the individual consciousness, in that which is the life and soul of the man himself.

περὶ οὖθεν γὰρ ὄψις—λέξῃν] For about nothing human is there so much stability, as about the most excellent moods of the consciousness, for these are thought to be more abiding even than the sciences. And the highest among them are most abiding of all, because the happy dwell in them most entirely and continuously, which appears to give the reason for their never being forgotten. Aristotle’s doctrine of the stability and permanence of mental states was inherited by him from the Cynic Antisthenes, Cf. Xenophon, Mem. 1. ii. 19: ὅπερ ἐν ποτὲ δὲ δικαίου δίκαιος γίνεται, οὐδὲ ὁ σωφρόν ὁ δὲ ἐκομηθή, οὐδὲ ἐκομηθή, ὡς μᾶθησις ἔστω, δὲ μᾶθησις ἔστω, δὲ μᾶθησις ἔστω, δὲ μᾶθησις ἔστω. To speak indeed of human ἔνεργεια as μόνον or συνεχεία is a sort of contradiction of Aristotle’s own philosophy, cf. Eth. x. iv. 9; Metaph. viii. viii. 18. The more accurate expression of his principle would be to say that while the
'Ενέργεια is perpetually blooming out, and then disappearing, the "Εξωθεία abides, and is ever tending to reproduce the 'Ενέργεια. Life then may be regarded as a series of vivid moments, with slight intervals or depressions between, or again, ideally, as a vivid moment of consciousness, the intervals being left out of sight. Cf. Essay IV. p. 250. The 'Ενέργεια then is our life and being, and it would be absurd to speak of forgetting this. It is 'more abiding than the sciences,' i.e. than the separate parts of knowledge, which do not constitute the mind itself. The opposition here is not between the moral and intellectual 'Ενέργεια, as we may see from § 11, where it is said that 'the required stability will belong to the happy man, for always, or mostly, he will act and contemplate in accordance with the law of his being.' Σοφία, viewed as a mood of the mind, is as abiding as the moral qualities, and indeed admits of more continuous exercise. Cf. Eth. x. vii. 2.

12 δὴ λοιπόν ὡς—ποίησις, κ.τ.λ.] The distinction between ζωή and βίος is hardly preserved. 'Good fortunes, if small, obviously do not alter the balance of the life and feelings, but if considerable, and coming in numbers, they will make one's condition more blessed.' Cf. Eth. ix. ix. 9.

καὶ γὰρ αὐτὰ συνεπικοινωνών πέρικε [For they naturally add a lustre.] This is said from the practical point of view, which analyses happiness into the internal mood, and the external circumstances. From the ideal point of view, which takes happiness as a whole (Eth. 1. vii. 8), nothing can be added to it, or make it better.

'Although contrary circumstances may and deface
ρίον' λύσας τε γὰρ ἐπιφέρει καὶ ἐμποδίζει πολλαῖς ἐνεργείαις. ἂμως δὲ καὶ εἰν τούτως διαλαμίπει τὸ καλὸν, ἐπειδὴν φήσῃ τις εὐκάλπας πολλὰς καὶ μεγάλας ἀτυχίας, μὴ δὲ ἀναλυγήσαι, ἅλλα γεννάδιας ἕν τὰ καὶ μεγαλόφυς. εἰ δὲ οἴνων αὐτὸ ἐνεργείαις κυρίαι τῆς ζωῆς, καθάπερ εἴπομεν, οὐδεὶς ἂν γένοιτο τῶν μακαρίων ἄθλοις. οὐδέποτε γὰρ πράξει τὰ μιστὰ καὶ φαύλα. τὸν γὰρ ὁς ἄληθῶς ἁγαθὸν καὶ ἐμφρόνη πάσαις οἴμεθα τὰς τύχας εὐσυχιώνοις φήσει καὶ ἐκ τῶν ὑπαρχόντων ἀεὶ τὰ κάλλιστα πράττει, καθάπερ καὶ στρατηγὸν ἁγαθὸν τῷ παρόντι στρατοπέδῳ χρήσαι τολμηκότατα καὶ σκυτοτόμων ἐκ τῶν δοκότων σκύτων κάλλιστον ὑποῦμαι πολεῖν. τῶν αὐτῶν δὲ τρόπων τοὺς ἄλλους τεκνίσαι αὐταῖς. εἰ δὲ οἴνως, ἄθλοις μὲν οὕτως 14 ποτε γένοιτ' ἂν ὁ εὐδαίμων, οὐ μὴν μακαρίος γε, ἂν Πρι- αμικαῖς τύχαις περιττῇ. οὐδὲ δὴ ποικίλος γε καὶ ὑμεταβολές. οὕτω γὰρ ἐκ τῆς εὐδαίμονίας κινῆσται βραδίως, οὐδ' ὑπὸ τῶν τυχόντων ἀτυχικάτων ἀλλ' ὑπὸ μεγάλων καὶ πολλῶν. ἐκ τῶν τοιούτων οὐκ ἂν γένοιτο πάλιν εὐδαίμων ἐν ὁλίγῳ χρόνῳ, ἀλλ' εἶπερ, ἐν πολλῇ τινὶ καὶ τελεῖο,

felicity, by introducing pains, and often hindering the play of the mind. But nevertheless, even in these, what is beautiful shines out, when once bears easily many and great misfortunes, not from insensibility, but from being of a noble and magnanimous nature.' In this place, and in Eth. vii. viii. ix. 4 (where he describes the brave man voluntarily consenting to death), Aristotle exhibits a high moral tone, quite on a level with the Stoics, and which places him above the accusation of being a mere Euhemerist.

13 εἰ δὲ εἰς —φαύλα] 'Now if life is determined by its moments of consciousness, as we have said, no one of the blessed will ever become miserable, for he will never do what is hateful and mean.' μακάρως, which is used repeatedly here and elsewhere, is a more enthusiastic term than εὐδαίμων. Though it is applied to ἀθλοὶ in the previous section, it would seem generally more applicable to the internal feelings. By a false etymology, Eth. vii. xi. 2, it is connected with χαράς. In the next section it is predicated negatively of the εὐδαίμων.

'And after such he cannot again become happy in a short time, but if at all, in a long and complete period, having attained great and noble things in it.' This shows that happiness, being deep-seated, and depending on the entire state of mind (ἐν), is neither lost nor won easily.
15 τί οὖν κωλύει λέγειν ευθαίρετα τὸν κατ’ ἀρετὴν τελείαν ἐνεργοῦντα καὶ τοῖς ἐκτὸς ἀγαθῶς ἰκανῶς κεχορηγημένον, μὴ τὸν τυχόντα χρόνον ἄλλα τέλειον βίον; τὸ προσθέτειν καὶ μισθόμενον οὕτω καὶ τελευτήσατα κατὰ λόγον; ἐπειδὴ τὸ μέλλον ἀφανὸς ἡμῖν, τὴν εὐδαιμονίαν δὲ τέλος καὶ τέλειον 16 τίθεμεν πάντες ἀνθρώπους.

11 Καὶ περὶ μὲν τούτων ἐπὶ τοσοῦτον δισοφίστω, τὰς δὲ τῶν ἀπογόνων τύχας καὶ τῶν φίλων ἀπάντων τὸ μὲν μηδενικόν συμβάλλεσθαι λιγάν ἀφίλον φαίνεσθαι καὶ ταῖς ᾧ ὑπάρχει ἀνατίλλεται πολλάς δὲ καὶ παντοίας ἐχόμενοι διαφορὰς

15 τί οὖν—πάντως] "What hinders then to call him happy, who is in the fruition of absolute harmony of mind and is furnished sufficiently with external goods—not for a casual period, but an absolute lifetime? or must one add—" and who shall live on so and die accordingly"—since the future is uncertain to us, and we assume happiness to be an End-in-itself and something absolute in every possible way?" τέλος, as before said, has two associations: one popular, with the common sense of τέλος, and thus means 'complete,' or 'perfect;' the other, philosophic, with the End-in-itself, and thus means that which is in and for itself desirable, that in which the mind finds satisfaction, the absolute. The word here seems to hover between its two meanings. Aristotle probably was not conscious of the collision between the frequent use of τέλος here and the question to which this chapter is an answer—ἐι χρὴ τὸ τέλος δρᾶν.

16 εἰ δὲ οὕτω—ἀνθρώπους] 'If so, we shall call those happy during their lifetime, who have and shall have the qualities mentioned, but still happy as men only.' Solon's view, which had rested on too great a regard to external fortune, is accordingly superseded. Happiness viewed from the inside—from its most essential part—may be predicated of the living, though still with a reserve, since they are still subject to the conditions of humanity.

XI. 1 He returns to the question before incidentally mooted (1. x. 4), whether the happiness of the dead can be affected by the vicissitudes of the world they have left. He will not altogether deny that some consciousness of events may reach the dead, but without determining this he argues that in any case the impression produced by them must be too slight and unimportant to affect our notion of the dead.

ταῖς δὲ τοῖς ἀνατίλλεται] In the so-called Menoeceus of Plato (p. 248 ν) we find this opinion stated in a wavering form.—(The dead are supposed to address their surviving parents) δεῖ μεν δῆ καὶ πατέρων καὶ μητέρων τῇ αὐτῇ ταῦτῃ διανοαὶ χρωμένους τῶν ἐπίθεμαν βίον διάγειν, καὶ εἰδούσαι τοι ὃ ἐργασθεῖται ὁδὸν δισοφίστω ἡμῖν ἡμῖν μᾶλλον.
τῶν συμβαινόντων, καὶ τῶν μὲν μᾶλλον συνεικονισμένων τῶν ὦ ἦτον, καὶ ἐκαστον μὲν διαμεῖν μακρὸν καὶ ἀπέραντον φαίνεται, καθόλου δὲ λεγόθην καὶ τύπῳ τάχις ἀν ἰκανῶς ἔχει. εἰ δὴ, καθάπερ καὶ τῶν περὶ αὐτῶν ἀτυχημάτων τὰ 3 μὲν ἔχει τι βρώσεαν καὶ ἑσπῆν πρὸς τὸν βίον τὰ δὲ ἐλαφροτέροις εἴοικεν, οὕτω καὶ τὰ περὶ τοῦς φίλους ὁμοίως ἀπαντάς, διαφέρει δὲ τῶν παθῶν ἐκαστον περὶ ζώντας ἡ τέλειος τῆς αἰτίας συμβαινεῖν πολύ μᾶλλον ἡ τὰ παρόνων καὶ δεινὰ προϊστάμενον εἰς ταῖς τραγῳδίαις ἡ πρᾶττεσθαι, συλλογιστέον δὴ καὶ ταύτῃ τῇ διαφοράς, μᾶλλον δ’ ἢσιν τὸ 5 διαπρεπέσθαι περὶ τοῦς νεκρήματας εἰ τινὸς ἀγαθοῦ κοινωνοῦσιν ἢ τῶν ἀντικειμένων’ εἴοικε γὰρ ἐκ τούτων εἰ καὶ

χαριῶντα, ἀλλ’ εἰ τις ἐστι τοῦτο τετελεμικῶς ἀνθρόπων τῶν ἐγών, οὕτως ἄχριστος εἶναι ἔναν μάλιστα, π.τ.λ.

3—4 εἰ δὴ—διαφοράς] Τhere is a complex protasis, (1) εἰ δὴ; (2) διαφέρει δὲ. The apodosis to both is συλλογιστέον δὴ. The argument is, that we must bear in mind the difference: (1) between misfortunes in themselves, light and heavy; (2) between those, of whatever kind, happening in our lifetime and after our death. ‘If, then, it is the same case with regard to the misfortunes attaching to the circle of a friend’s as it is with those attaching to oneself, namely, that some have a certain weight and influence upon life, while others seem lighter; and if, again, there is a difference between the impression made by events on the living and on the dead far greater than that between crimes and horrors enacted upon the stage or only alluded to in tragedies; we must, I say, take account of this difference.’

προϊστάμενον—ἡ πράττεσθαι] The contrast is that between the actual representation of horrors, or the mention of them, as ‘presupposed,’ and done off the stage. It is merely the principle of Horace. A. P. 181.

συλλογιστέον] This cannot mean ‘We must conclude;’ else the same proposition would form both the premises and the conclusion; but ‘we must take account of,’ i.e. we must make ‘this difference’ part of the premises we have to go upon in all reasonings about the dead. The word is used, not in its technical Aristotelian, but rather in its earlier and natural sense, according to which it meant ‘to put together the grounds of an argument.’ Cf. Plato, Charmides, p. 160 d: πάντα ταύτα συλλογιστέοι εἰς τὸ ἐκ καὶ ἀνάδρωσιν. The Paraphrase here writes σκεπτόντιν ὁ δὲ περὶ τὴν διαφοράς.

5 μᾶλλον δ’ ἢσιν—ἀντικειμένων] ‘Or rather, perhaps’ (we must take into account, συλλογιστέον understood), ‘the fact that a question is raised about the dead, as to whether they share at all in good or evil.’ A difficulty has been made about τὸ διαπρεπέσθαι. ‘Lambinus ex Vet. Int. et Argypop. emendat τὸ δὲ δὲ, cumque lectionem Zwingi in textum receptit, quae haec tunus commendatur, quia sequenti δὲ absorberi facile poterat δὲ et δὲ.’—Zell. The conjecture is supported by the rendering of the Paraphrast, who separates this clause from the preceding one. σκεπτόντιν ὁ δὲ περὶ τὴν διαφοράς. βέλτιστων.

δικνεῖται πρὸς αὐτοῦς ὅτι οὖν, εἰτ' ἀγαθῷ εἰτε τοῦναντίον, ἀφαιρέσθαι τι καὶ μικρὸν ἢ ἀπλῶς ἢ ἐκείνος εἶναι, εἰ δὲ μὴ, τοσοῦτον γε καὶ τοσοῦτον ἀστε βιοι ἐνδαίμονας τοὺς· 6 καὶ τοὺς ὅντας μηδὲ τοὺς ὅντας ἀφαιρέσθαι τῷ μακρόν. συμβάλλεται μὲν οὖν τι φαίνονται τοῖς κεκριμένοις αἱ ἐπιστρεφθέντα ἐν τῶν φίλων, ὅμως δὲ καὶ αἱ διαστολές, τοιαύτα δὲ καὶ τηλικαύτα ἀστε βιοι ἐνδαίμονας μηδὲ ἐνδαίμονας ποιεῖν μητ' ἄλλο τούν τοιούτων μηδὲν.

12 Διερεισμένων δὲ τούτων ἐπισκεψάμεθα περὶ τῆς ἐνδαιμονίας πότερα τῶν ἐπαινεῖτων ἐστίν ἢ μᾶλλον τῶν τιμών· 2 δὴλον γὰρ ὅτι τῶν γε δυνάμεων οὐκ ἔστιν. Φαίνεται δὴ

συμβάλλεται πτ'], 'to contribute,' or 'communicate something.' Cf. Eth. III. i. 12: μηδὲν συμβαλλόμενον τῷ βιοσθέντος. κ. x. 19.

ΧΙΙ. The question which occupies this chapter, namely, in which class of goods happiness is to be placed, the admirable or the praiseworthy? is one that appears of little ethical interest, to have no important scientific bearing, in short, to degenerate into a sort of trifling. Aristotle, however, who aims at verbal precision and distinctness, and again, who wishes to reconcile his theory with all questions, doctrines, and forms of language of the day, appears to have thought it worth a passing consideration. We may regard the present question as the last of that series of collateral questions growing out of his definition of happiness. It is answered by being stated; for the Chief Good and the Absolutely Desirable must necessarily be above praise, which is only given to the relatively, not to the absolutely good.

I δήλον γὰρ ὅτι τῶν γε δυνάμεων οὐκ ἔστιν] 'For it is plain that it is not a merely potential good.' This implies a classification of goods into (1) potential, (2) actual, which latter are sub
XI.—XII. | 469

πάν τὸ ἐπαινεῖτον τῷ ποιόν τι εἶναι καὶ πρὸς τί παρ' ἑκείνων ἐπαινεῖται, τὸν γὰρ δίκαιον καὶ τὸν ἄνθρωπον, καὶ ὅλως τὸν ἁγαθὸν καὶ τὴν ἁρετὴν ἐπαινοῦμεν διὰ τὰς πράξεις καὶ τὰ ἔργα, καὶ τὸν ἵσχυρον καὶ τὸν ὁρμητικὸν καὶ τῶν ἀλλῶν ἑκατὸν τῷ ποιόν τινα πειθόμεναι καὶ ἑκείνων παρ' ἁγαθῶν τι καὶ σπουδαῖον. ὑηλὸν δὲ τούτῳ καὶ ἐκ τῶν περὶ τοὺς θεοὺς ἐπαινούς γελοῖοι γὰρ φαίνονται πρὸς ἡμᾶς ἀναφέρομεν, τοῦτο δὲ συμβαίνει διὰ τὸ γίνομαι τοὺς ἐπαινούς δι' ἀναφορὰς, ὡσπερ ἐπαρκεῖ. εἰ δ' ἐστὶν δὲ ἐπαινοσ τῶν τοιούτων, δὴ ὁ δὴ τῶν ἁριστῶν οὐκ ἐστὶν ἐπαινος, ἀλλὰ μείζων τι καὶ βέλτωτον, καθάπερ καὶ φαίνεται τοὺς τὸ γὰρ θεοὺς μακραίτως καὶ εὐδαιμονίζομεν καὶ τῶν ἁριστῶν τοὺς διεστάτως μακραίτως. ὡμοίως δὲ καὶ τῶν ἁγαθῶν· οὐδεὶς γὰρ τὴν εὐδαιμονίαν ἐπαινεῖ καθάπερ τὸ δίκαιον, ἀλλ' ὡς βειστὲρον τι καὶ βέλτωτον ὀμοίως. δοκεῖς δὲ καὶ Ἐσκάδος καλῶς συνεγράφησαι περὶ τῶν ἁριστῶν τῇ ἦξιν, τὸ γὰρ μὴ ἐπαινεῖ καὶ τῶν ἁγαθῶν ὡσπερ μηνύεις ὁμοίως ὅτι κρείττων ἐστὶ τῶν ἐπαινεῖτων, τοιοῦτον δ' εἶναι τὸν θεόν καὶ τὰ ἁγαθά πρὸς ταῦτα γὰρ καὶ τὰλλα ἀναφέρομεν. ο μὲν γὰρ ἐπαινος τῆς ἁρετῆς πρακτικὸς

divided into praiseworthy and admirable. There is a complete commentary on the present passage to be found in the Magna Moralia, i. ii. 1: 'Επει δ' ὄντων τούτων διείσταται, πειρατεῖς λέγειν τῶν ἀνθρώπων λέγεται. Ἔστι γὰρ τῶν ἁγαθῶν τὰ μὲν τίμα τὰ δὲ ἐπαινεῖται, τὰ δὲ δυνάμει. τὰ δὲ τίμων λέγει τὸ τοιοῦτον τὸ θόν τὸ βέλτιον, οἶνος, γυνὴ τὸ ἄρχωντερον, ὡς ἁρχή, τὰ τοιοῦτα . . . τὰ δὲ ἐπαινεῖται οὖν ἄρηται . . . τὰ δὲ δυνάμει, οἶνος ἁρχή (tule), πλούσιος, λογος κλαδος τούτων γὰρ καὶ δ σπουδαῖος οἱ καὶ νῦν κρῆς σανται καὶ ο φαινος κακῶς, διὸ δυνάμει τὰ τοιοῦτα καλοῦνται ἄγαθα . . . λοιπὸν δὲ καὶ τέταρτον τῶν ἁγαθῶν τὸ σωφρονικόν καὶ ταυτούχον ἀγαθῶν, οἶνος γυναῖκα ἐν ἄσκησι καὶ δέ τι ἐλλε τοιοῦτον. 3 γελοῖοι γὰρ φαίνονται οὐ οἴ θεοί, Eth. x. viii. 7. Hence, in the 'Τὸ Deum laudamus,' laudare is used in a different sense from ἐπαινεῖν, διὰ τὸ γίνεσθαι τοὺς ἐπαινούς δι' ἀναφορὰς. 'Because praise is made by a reference to some higher standard.' 5 δοκεῖ δὲ — ἀναφερομέναι 1 Now Eudoxus also seems to have well pleaded the claims of pleasure to the first prize, for he argued that its not being praised, although it is a good, shows that it is above the class of things praiseworthy, as God and the chief good are, to whom all other things are referred.' On Eudoxus see Eth. x. i. 1—2, Essay III. p. 217. The metaphor of the Aristeus here seems borrowed from the Philoetus of Plato, p. 228: 'Αλλὰ μὴν, ε Ἀριστερεῖ, ἢμοιγε δοκεῖ τὸν μὲν ἴδρον σοὶ πεντα-
γὰρ τῶν καλῶν ἀπὸ ταύτης τὰ δ᾽ ἐγκώμια τῶν ἔργων ὁμίλως καὶ τῶν συμματικῶν καὶ τῶν ψυχικῶν. ἀλλὰ ταύτα μὲν ὦσι οἰκείωτέρον ἐξακριβώθησιν τοῖς περὶ τὰ ἐγκώμια πεπονομένοις, ἡμῖν δὲ ὄγκον ἐκ τῶν εἰρημένων ὡς ἐστὶν η 8 εὐδαιμονία τῶν τιμῶν καὶ τελείων. ἔστει δ᾽ οὕτως ἔχειν καὶ διὰ τὸ εἶναι ἄρχη νταύτης γὰρ χάριν τὰ λοιπὰ πάντα πάντες πράττομεν, τὴν ἄρχην δὲ καὶ τὸ αἰτίον τῶν ἄγαθῶν τιμῶν τι καὶ βέιον τίθεμεν.

XIII. With this chapter commences a new division of the treatise. Aristotle now opens the analysis of the terms of his definition. If happiness be 'vital action in conformity with the law of absolute excellence,' the question arises, what this law of excellence is?—a question essentially belonging to Politics. The answer to this Aristotle gives by the aid of a popular and empirical Psychology. Without attempting to sound the depths of the subject, he assumes, as sufficient for his present purpose, a threefold development of the internal principle (ψυχή) into (1) the purely physical or vegetative, (2) the semi-
rational or appetitive, (3) the purely rational. The first being excluded from all share in virtue, or human excellence properly so called; the second is considered the sphere of moral, and the third that of intellectual virtue. This division regulates the methodical arrangement of the Ethics. Also it may be said to have regulated almost all subsequent human thought on moral subjects. On Aristotle’s general philosophy of the psyche, see Essay V. p. 294.

2 δοκεῖ δὲ—ὑποκείμενον. This, too, seems to have been the main concern of the true politician, for he wishes to make the citizens good and obedient to the laws. As we find in Plato ἀλήθεια is the quality most characteristic of the Ideas, so καὶ ἀλήθεια here implies a thing being absolutely, deeply, essentially what it is to the exclusion of all mere seeming. The contrast here would be to those πρακτικοί πολιτεία mentioned Eth. vi. viii. 2. Also to those historical and eminent statesmen whom Plato attacks in the Gorgias, p. 515 c sq., as having been entirely devoid of this object—making the citizens better.

3 παράδειγμα δὲ—γεγένηται. As an instance of this we have the law-givers of the Cretans and Lacedaemonians, and if there have been any others such like. Aristotle seems to have inherited the preference felt by Plato and by Socrates for the Spartan constitution; not so much as a historical fact, but rather as a philosophical idea. It presented the scheme of an entire education for the citizens, though Aristotle confesses that this became degraded into a school for gymnastic.

5 περὶ ἀρετῆς ἐπισκεπτῶν ἀνθρωπίνης δῆλον ὦτι. Now it is obviously about human excellence that we have to enquire. ‘This passage would prove, if it were necessary, the indeterminate sense with which the term ἀρετή is introduced into Aristotle’s Ethics. At first it appears merely as the law of excellence, quite in a general signification. Afterwards this is gradually restricted to human excellence, and then physical or bodily excellence is finally excluded.

7 εἶ δὲ ταῦτα—ιστρακής. ‘But if this be so, it is plain that the politician must know in a way the nature of the
internal principle, just as he who is to
cure the eyes must know also the whole body.
And this holds good the more
in proportion as Politics is higher and
better than medicine. A different
interpretation is given by some com-
mentators; thus Argyropulus, fol-
lowing the scholium of Eustratius, trans-
lates: ‘Quemadmodum et eum, qui
curaturus est oculos totumque corpus,
de ipsis scire oportet,’ as if the ana-
logy between the iatros and the po-
litician were this, that they both are
concerned to know the nature of that
which they propose to benefit. The
Paraphrast, however, takes it as above,
referring καὶ τοῖς ἑαυτοῖς not to θερα-
pευτομᾶς but to δεῖ εἰλθέναι. That this
is the true interpretation is rendered
almost certain by a passage in Plato
(Charmides, p. 156 ν), from which the
present comparison was in all proba-
bility taken: ἃλλ’ ὅσπερ τοὺς ὕμνον καὶ
ταῖς ἄκηκας τῶν ἄγαθων ἵππον, ἐπειδὰν
Τῷ δὲ αὐτῶν προσέλθῃ τοῦ ἡθολομοι ἀγάνων, ἄριστον ἴουν, διό τι οὐχ ὅτι τοῖς μιᾶς ἐπεχειρεῖν τῶν ἡθολομοί ἰσοπον, ἅλλ’ ἀναγιγνῶν ἐξ ὧν ἦν καὶ τὴν κεφαλὴν θεραπεούσης, εἰ μέλλαι καὶ τὰ τῶν ἐμαύτων ἢ ἔχειν καὶ ἢ τὸ τῆς
κεφαλῆς οἴσθαι ἐν τοῖς θεραπεοντας αὐτῷ δέ’ ἐπιστρέφει ἃνευ διαῦ τοῦ σώματος τολλάν άνθρωπον εἶναι. The general sense
here evidently is that as the oculist
must know to a certain extent the rest
of the body, so the politician, who has
not by any means to deal with the
whole of the ψυχή, must, yet, in some
measure, know its entire nature. This
knowledge, however, is to be limited
(§ 8) by a practical scope. With
χαριστεῖς cf. De Sen. 1. 4: καὶ τῶν
ἱμαμῶν οἱ ψυχοσφαιρίων τὴν ἔχουσα
μετώπους.

9 λέγεται—ἔχειν] ‘Now even in
popular accounts certain points are
sufficiently stated with regard to the
internal principle, and we will avail
ourselves of them; as, for instance,
that part of it is irrational and part
rational.’ For an account of the
ἐπιστροφικός λόγος, and for arguments
showing that they do not designate a
separate class of Aristotle's own works,
see Appendix B to Essays.

10 τοῖς δὲ—παρὰ] ‘But whether
these are divided like the limbs of the
body, and all other divisible matter,
or whether they are only distinguishable in conception, while in nature they are inseparable, like the concave and convex in the circumference of a circle, makes no difference for our present purpose.' The above-mentioned division of the ψυχή, which is attributed to Plato, Magna Moralia, 1. i. 7, is attacked by Aristotle, De Animae, 1. v. 26, and again, more definitely, De Animae, iii. ix. 3. He here avails himself of it as popularly true, though he indicates also that from a higher point of view it will not hold good—that at all events it is a distinction and not a division.

11 τοῦ ἀλόγου—τινά] 'Now of the irrational division part appears common and vegetative, I mean that which is the cause of nourishment and growth; for this sort of power of the internal principle one must assume as existing in all things that are nourished, and even in embryos, and this same also in full-grown creatures, for it is more reasonable to suppose this than any other to be the cause of nutriment and growth.' To τοῦ μὲν οὐκε κανέν ψυχή ἐναι ἄνω τεμειρόμενος θεία τις ἐν καὶ ἐν τοίς ἔμβρυοις, τοῦ αὐτῆς δὲ ταύτην καὶ ἐν τοῖς τελείοις εὐφυσάστερον γὰρ ἢ ἄλλην τινά. ταύτης μὲν 12 οὖν κοινῆς της ἁρτῆς καὶ υπὲρ ἀνθρωπίνης φαίνεται· δοκεῖ γὰρ ἐν τοῖς ὑπνοις ἐνεργείως μάλιστα τὸ μόριον τοῦτο καὶ ἡ ψυχαίμης αὐτη, ὃ δ' ἁγάθος καὶ κακῶς ἴχθυστα διαδόθηκαν καθ' ὑπνοι, θεῖν φασίν οὖνδεν διαφέρειν τὸ ἡμίσυ τοῦ βίου τοὺς εὐθαμαίρομεν τῶν ἀθλιῶν. συμβαίνει δὲ τότε εἰκόταις· ἁρ-13 γίναι γὰρ ἡπὶ τὸν οὐκ εἰς τὴν ψυχής ἢ λέγεται σπουδαία καὶ φαύλη, πλὴρος εἰ περὶ κατὰ μικρῶν διαφορών τινις τῶν κινή-σεων, καὶ ταύτην ἑξετάω γίνεται τὸ φαντάσματα τῶν ἐπει-

make their irrational sidelined. Afterwards (§ 19) he says that, viewing it differently, you may call the rational twofold. κανέν, i.e. 'not distinctive of man.' τελειός is used in the non-philosophical sense. Aristotle's psychology is of course constructed upon a physical basis. The principle of life develops itself into perception and reason, but the lower modes of it are necessary conditions to the higher, and exist in them. So Dryden says (Palamon and Arcite, m. sub fin.) that man is

'First vegetive, then feels, and reasons last;
Rich of three souls, and lives all three
to waste.'
as something morally good or bad, except so far as certain impulses may to a trifling extent reach it, and in this way the visions of the good will be better than those of the common sort. The physical principles here enunciated are stated at length in the interesting treatises De Somno et Vigiliis, De Insomniis, et De Divinationi per Somnum, which occur among Aristotle's Pare Naturalia. It may be sufficient now to allude to his definition of sleep and its cause (De Somno iii. 30)—that it is a sort of catalepsy of the consciousness, caused by the rising of the vital warmth so as to clog the perceptive organ, and resulting necessarily from the functions of animal life, which its object is to preserve, by providing a rest for them. He speaks also (De Somno i. 15) of the nutritive particle performing its office more during sleep than waking, "since creatures grow most during sleep." In his discussions about dreams we find a frequent recurrence of the words here used, κυνός—δίωνιον—φαντάσμα. He defines a dream to be 'that image resulting from the impulsion of the sensations which arises in sleep, and is dependent on the peculiar conditions of sleep.'

(De Insomn. iii. 19) τὸ φαντάσμα τὸ ἀπὸ τῆς κυνόσεως τῶν αἰθημάτων ἢν εἶν τοῦ καθοδέως γὰρ καὶ τὰ καθεδέως, τὸν' ἐστὶν ἐνύπνων. In his excellently wise treatise on prophetic dreams he seems especially to dwell upon the fact that in dreaming the moral distinctions between men are lost, hence dreams cannot be sent by God. (i. 3) τὸ τε γὰρ θεὸν ἐναὶ τὸν νόμον, τρύγαν αὐλογία, καὶ τὸ μὲ τοῖς βελτιστοῖς καὶ φρονιμωτάτοις ἀλλὰ τοῖς τυχοῦν τῆς ὀργῆς ἀτομῶν. (This is well illustrated by Plato, Republic xi. p. 571 c sqq.) In another place, however, he connects the illusions of dreaming with the personal character, just as the coward, he says, and the lover would form different mistakes about a distant object. (De Insomn. ii. 15). This last coincides with what is said above about the φαντάσµατα τῶν ὑπνών. Cf. on dreams generally Aristotle's Problemat. xxxi. xiv.

15—16 οὖν δὲ ἀνθρώπους. But there seems also to be another nature in the internal principle which is irrational, and yet in a way partakes of reason. For in the continent and the incontinent man we praise the reason, and the them which
possesses reason, for this exhorts them rightly, and to what is best; but there appears also to be something else in them besides the reason, which fights and strives against the reason. For just as paralysed limbs of the body, when we mean to move them to the right, go in the opposite direction to the left, so it is with the mind. For the tendencies of the incontinent are in the opposite direction to reason. In the body we see the false movement, but with regard to the mind we do not see it. But perhaps not the less ought we to believe that there is in the mind something besides the reason which is opposed to it, and goes against it. Zell mentions a conjecture, τοῦ γὰρ ἐγκρατοῦ καὶ ἐσκρατοῦ. But a slight consideration of the context shows that no change is required. It has been said that this passage exhibits the doctrine of 'human corruption.' To say this introduces a set of associations foreign to Aristotle. Aristotle's remark (1) does not go so deep as to the contrast between sin and holiness, purity and corruption: (2) it does not point out a radical and incurable defect in the whole race of man; on the contrary, he says presently that in the ἐγκρατία 'all things are in harmony with reason.' However, we may well esteem the present observation, especially when first made, as one of the most penetrating pieces of moral psychology. Aristotle's purpose is to establish the existence of a principle, μετέχου λόγου, which is to be the sphere of the practical virtues. This he exhibits in the case of the continent and incontinent (i.e. man in a state of moral conflict) as opposing and fighting against the reason. This is given as a fact of nature. This same fact viewed from the side of personal repentance might be well expressed in the language of St. Paul. Before attributing anything like the above-mentioned doctrine to Aristotle, we should require to examine the whole bearing of his moral theories, instead of deciding from an isolated passage.

17 τῶν ἐ' ἐτερον, οὔδεν διαφέρει] This shows that Aristotle does not propose here to seek deeply for the rationale of these phenomena in our moral nature.

ἔτερον—λόγων] 'And perhaps it is still more obedient in the temperate and the brave. For in them all things are in harmony with reason.' In Book vi. the ἐγκράτεις, who maintains virtue by a conflict, is opposed to the ἐσκράτειν, in whom there is an absolute harmony between the passions and the reason. Here the ἀγαθεῖς is added, as being one whose instincts coincide with his reason. This place, Book iii. vi.—xii., and Book vii., exhibit different points of view.
18 τὸ δ’ ἐπιθυμητικὸν—μαθηματικὸν]. ‘But the appetitive part, and generally speaking that which desires, in a way partakes of reason, inasmuch as it is subject and obedient to it. In like manner we speak of “paying attention to” one’s father or one’s friends, not in the same sense as we speak of “paying attention to” mathematics.’ Ἐγείρω λόγον ὑπὲρ Μετέχειν λόγων must be said of the passions in a different way from that in which it is said of the rational part of our nature. Aristotle illustrates this by adding the use of Ἐγείρω λόγων with a genitive, which exhibits also a shade of variety in the meaning. With Ἐγείρω λόγων πατρός, cf. Eurip. Alcestis, 51, Ἐγείρω λόγων ἡ καὶ προβολὴ στος. The passions are like the slaves, as defined in Politics 1. v. 9: ‘Εστὶ γὰρ φύσις δοῦλος ὅς καὶ πατρός λόγον τοσοῦτον ἔχειν αὐτὸ αὐτόν ἐξουσιοδοτείναι ἀλλὰ μὴ Ἐγείρω.

τῶν μαθηματικῶν] here apparently means, not ‘the mathematicians,’ as Eth. i. iii. 4, but ‘mathematics,’ as vi. viii. 9. So it is taken by the Paraphrast: Αἰσθήσεις δὲ λέγεται τὸ λόγων μετέχειν καθάπερ καὶ τὸ λόγων Ἐγείρω. Λέγομεν γὰρ τῷ πατρῷ καὶ τῷ φίλῳ λόγων Ἐγείρω, τὸ ἐπιστρέφον οὕτως πρὸς αὐ-

20 διαφέρει οὖν λόγον Ἐγείρω]. ‘According to this division also is human excellence divided. For we speak of intellectual excellences, and moral excellences; philosophy, intelligence, and thought being intellectual, liberality and temperance moral. For when speaking of the moral character we do not say that a man is philosophic or intelligent, but that he is gentle or temperate: yet we praise the philosophic man also, with regard to his state of mind, and praiseworthy states of mind we call excellences.’ The old difficulty of translating less definite ancient words into more definite modern ones occurs here. Aristotle
λέγομεν δὲ τὸν σοφὸν ἡ συνετὰς ἀλλ' ὅτι πράος ης σώφρον,
η ἐπαινοῦμεν δὲ καὶ τὸν σοφὸν κατὰ τὴν ἐξειν. τῶν ἑξειν δὲ
tῶς ἐπαινετὰς ἀρετὰς λέγομεν.

is founding the distinction between the Intellectual and the Moral which has lasted ever since. But he uses the word ἄρετη as applicable to both spheres, whereas the instinct of men, whether rightly or wrongly, inclines to confine the name of virtue and the award of praise to the moral side,—to acts or states in which the will is prominently exerted. On this point we can trace a progress even in the Peripatetic school, for while the sentence ἐπαινοῦμεν δὲ καὶ τὸν σοφὸν is repeated in the Eudemian Ethics (π. i. 18), it is corrected in the Magna Moralia (1. v. 3), κατὰ γὰρ ταῦτα ἐπαινετοι λεγόμεθα, κατὰ δὲ τὰς τοῦ τῶν λόγων ἔχοντος οὐδὲς ἐπαινεῖται. οὗτα γὰρ ὅτι σοφῶς, οὐδὲς ἐπαινεῖται, οὕτω δὲ φρονίμως, οὐδ' ἔλοι κατὰ τι τῶν τοιούτων οὐδὲν. The last line in the first Book contains an anticipation of much that is demonstrated in Books II. and III.
PLAN OF BOOK II.

THE Second Book of the Ethics goes far to determine the course of the entire succeeding work, by laying down a programme of the separate moral virtues, which is afterwards followed in Books III. and IV.; and by suggesting for future consideration the conceptions of Ὄρθος Λόγος and of Προαιρεσία. But it cannot be said that this book itself exhibits traces of preconceived arrangement or artistic design. On the contrary, it bears the same tentative character as Book I. Its parts are at first confused with each other, and design seems only to grow up as the book proceeds. Its contents may be arranged under the following heads:—

(1) A preliminary discussion on the formation of moral states. Ch. I.—IV.

(2) The formal definition of virtue according to its genus and differentia. Ch. V.—VI.

(3) The exhibition of this theory in a list of the separate virtues. Ch. VII.

(4) The relation of extremes, or vices, to each other, and to the mean or virtue. Ch. VIII.

(5) Rules for action, with a view to attaining the mean. Ch. IX.

Of these heads the first can with difficulty be divided from the second. The first four chapters implicitly contain the whole of the definition of virtue which is afterwards formally drawn out in Chapters V. and VI. And though the reservation of Ὅρθος Λόγος (II. ii. 2) for future analysis really afterwards gives rise to Book VI., and the account of intellectual ἀρετή; yet here Ὅρθος Λόγος is only cursorily, and by implication, identified with intellectual ἀρετή (τι ἡσιν ὣ Ὅρθος Λόγος, καὶ πῶς ἔχει πρὸς τὰς ἀλλὰς ἀρετὰς), and the
whole conception of Book VI. seems to belong to a later development of the Psychology of Aristotle, whether due to himself or to his school. Other marks of crudeness in detail will be adverted to in the notes. At the same time it would be unjust not to recognize the analytic penetration exhibited by Aristotle in the different parts of his theory of Virtue. The merit of this theory can only be appreciated by a comparison with the results which had been previously arrived at, as they exhibit themselves in Plato.
ΔΙΤΗΣ ὅ τις ἀρετῆς ὀφείλει, τῆς μὲν διανοητικῆς τῆς δὲ θυμιάς, ἡ μὲν διανοητικὴ τὸ πλεῖον ἐκ διδασκαλίας ἔχει καὶ τὴν γένεσιν καὶ τὴν αὐξήσιν, διότερ ἐμπειρίας δεῖται καὶ χρόνου, ὡς ἡ μηκὴ ἐξ ἐθών περιγίνεται, ἢδει καὶ τῷ παρεκκλήσην ἐσχάτους μικρὸν παρεκκλήσην ἀπὸ τοῦ ἔθους. ἦς Ὢδος καὶ ὦδον ὅτι ὑδρεύμα τῶν ἱθικῶν ἀρετῶν φύσει ἦμιν ἐγγίνεται. ὡδὲν γὰρ τῶν φύσεων ἰδίων ἄλλως ἐδίδεται, ὅπως ὁ

1. The discussion is taken up from the point last arrived at in the analysis of happiness, namely, the distinction of intellectual from moral ἀρετῆς. We are not immediately told that the consideration of the former is to be deferred. That indeed only comes out incidentally, when (i. ii. 2) the discussion of ὑπόθες λόγος is deferred, which ὑπόθες λόγος is afterwards (vi. xiii. 3) identified with φύσις, the perfection of the practical reason. Here the mention made of the two forms of ἀρετῆς only goes to imply that neither of them is innate—that they are both acquired. After this first paragraph, the book confines itself to moral virtue, discussing διότι it is acquired and what is its nature.

ἡ μὲν διανοητικῆς—ἐσχάτου] 1 Now intellectual excellence, for the most part, takes both its origin and its growth from teaching, and therefore it requires experience and time, but moral virtue results from habit; whence also it has, with a slight deflection, derived its name (ἡμῖκη from θος); a derivation which is doubtless suggested by Plato, Laws, vii. p. 792 e: κυριότατον γὰρ ὄν χριστάνα πάσιν τόσα (even in youth) ἔως ὡδος ἢ ὥς. A mechanical theory is here given both of the intellect and the moral character, as if the one could be acquired by teaching, the other by a course of habits. That Aristotle inclined to this mechanical view has been already noticed (Eth. t. ix. 4). It is qualified, however, by admissions with regard to ἑφύση, φυσικὴ ἀρετῆ, &c. (Cf. τ. v. 17.)

2 ὦδος—ἐγγίνεται] 1 Whence also it is plain that none of the moral virtues arises in us by nature. Additional proofs of this position are subjoined. (1) The laws of nature are unalterable, and independent of habit. (2) According to the doctrine of ἐνδείκτης and ἀναργεία (see Essay IV.), moral faculties are distinguished
from physical faculties in that the former are developed out of acts, and
do not merely find a development in acts. (3) The whole idea of legis-
lation is based on the supposition that virtue may be cultivated. (4) 
The analogy of the arts shows that out of practice grows perfection.
We need only compare the theory of virtue in this book with the dis-
cussions in the _Men_ of Plato, to see how immensely moral philosophy had
 gained in definiteness in the meantime. While becoming definite and
 systematic, however, it had also to some extent become scholastic and
 mechanical.

3 ὥστε ἀρῷ—θῶνοι ἃ Therefore the virtues arise in us neither by nature,
nor against nature, but on the one hand we have a natural capacity of
receiving them, and on the other hand we are only made perfect by habit.'
(Cf. _Eθh._ vii. xiii. 1—2, on the relation of _φυσικὴ δρᾶσις_ to _κυρία δρᾶσις_.) It
may be well, for the sake of clearness, to collect here some of the chief
applications of the word _φύσις_ to moral subjects in Aristotle, without going
into the deeper philosophy of his conception of _φύσις_ in relation to God,
&c. _φύσις_ is defined (_Metaph._ iv. iv. 8) as ἡ _φύσις_ ἡ τῶν _καθότων ἀρχῶν
κυνήγεως_ ἐν _καθαίρετι_. _The essence of things having their efficient cause
in themselves, by reason of what they are._ Here, then, we have two notions
blended together, (1) the essence of things, their matter and form; (2)
the productive principle of that essence, which is nothing external, but in the
things themselves. From this general conception, we see the term applied in
various ways.

I. _φύσις_ denotes the self-produced, or self-producing, principle, opposed
to that which is produced by the intelligence or will of man: thus to art (_Eθh._ vi. iv. 4) or to the
moral will, care, or cultivation (x. ix. 6). It is that for which we are irre-
 sponsible (_Ibid._), τὸ _μὲν_ ὅπερ _τῆς φύσεως_ ἐθάνατο ὡς ὅπερ ἡμὶ ἦσπερ. That
which comes of itself (vii. xi. 6), ὡς _ἡ_ _νόμισμα_ καὶ _γνώμη_, ὡς _τῆς
φύσεως_ _αἰτίας_ _ὁμιλεῖ_. That which is innate, and out of the sphere of the
will, (vi. xiii. 1), πᾶσι γὰρ _δοκεῖ_ ἐκ τῶν ἢ _νόμισμα_ φύσει _τοι_. (iii. v.
18), τὸ _τέλος_ _φύσει_ ἡ _ὁπερ_ ἐθαν _φαινότα_ _φαῖνεται_. It is opposed to habit, as
the original to that which is superinduced, (vii. x. 4) _ῥῆμα_ ὅποιο _μετακινήθη _φύσεως_. Also, to the
result of circumstances, (iii. v. 15) τοῦ _φύσεως_ _καὶ_ _νόμου_ _καὶ_ _παλαιᾶς_.

II. From the idea of the self-caused (_καθ' ἀνόμωλόν_), it comes to mean that
which is under a _fixed_ law opposed to the variable, (v. vii. 2) _τὸ μὲν_ _φύσει_
ἀκολουθοῦν. Or, to the arbitrary and conventional, (i. iii. 2) _νόμῳ_ _μόνῳ_, 
φύσει _δὲ_ _μὴ_. _The absolute opposed to the relative_, (iii. iv. 3) _τὸ_ _φύσει_
βούλητον.

III. It means not only a law, but also a tendency, as v. vii. 4, _φύσει_ _δὲ_ _κρήτων_.

IV. The character and attributes of a thing, whether good or bad,
the powers possessed by a thing, (t. iii. 4) ἡ τοῦ πράγματος φῶς. (ππ. i. 7) ἡ τῆς ἀνθρωπίνης φῶς ὑπερτείνει.

V. The whole constitution of a thing, viewed as realising its proper τίλος, or the idea of good in itself, the perfect or normal state of anything. (vii. xi. 4) γένοις εἰς φῶς αἰσθήματι. (ππ. xii. 2) ὑπὲρ λίτη ἐξίστομαι καὶ φθείρα τὴν τοῦ ἐχθροῦ φῶς. Cf. Politics, i. ii. 8: ὅτου γὰρ ἐκείνου ἔστι τῆς γένους τελευταία, ταύτην φαμιν τῆς φῶς ἐστὶν ἐκάστου, ὑπὲρ ἀνθρώπου, ἰπποῦ, οἰκίας.

VI. The word is sometimes almost periphrastic; Topos, i. i. 3 ὑ τοῦ ποιεῖται φῶς. Similar to this is the usage in Eth. Nic. i. xiii. 15: ἀλλὰ τις φῶς τῷ ψυχῆς ἄγος.

4 ἢ τοῦ ἀνθρώπου. 'Again, in the case of every faculty that comes to us by nature, we first of all possess the capacity, and only afterwards exhibit it in actual operation. This is clear with regard to the senses, for we did not get our senses by hearing often or seeing often, but on the contrary we used them because we had them, and did not have them because we used them. But the virtues we acquire only after having first acted, which is also the case with the arts: for these things which we must learn before we can do, we learn by doing; as for example, men become builders by building, and harpers by playing on the harp. In the same manner we become just by doing just actions, temperate by doing temperate actions, and brave by doing brave actions.' On the philosophy of this doctrine, see Ar. Metaph. vni. viii. and Essay IV, above, from which it will be seen that 'acts' or 'operations' is an inadequate translation for ἐνέργεια. On Aristotle's position with regard to the question whether sight is an inherent or an acquired faculty, see below, viii. viii. 9. note.

τῶν ἀλλῶν τεχνῶν. 'The arts besides,' not as if virtue were reckoned among the arts. On the idiom, cf. Plato, Gorgias, p. 473 C: ἐφοίσκησάμενοι ἐντὸς τῶν πολιτῶν καὶ τῶν ἀλλῶν ἔνων. αἱ ἄλλαι seems to imply a separate class in juxtaposition, as in the French idiom, 'vous autres.' Cf. Eth. ii. ii. 8: ἢ τῶν ἀλλῶν τῶν φανερώτερων.
6 ἐτι ἐκ—καθαροτάται] 'Again, every virtue, as well as every art, is produced out of and by the same things that destroy it; for it is by playing on the harp that both good and bad players are formed.'

ἐκ τῶν ἁμαρτανων] i.e. the circumstances and acts are generically the same, only differing as to well and ill. The doctrine here stated is no doubt true, with an addition. For it must not be supposed that all men start equal, either as artists or in morals. What is it that determines the well or ill of the first essays in art or in action? In the one case we say genius, talent, aptitude, or the reverse; in the other case, θέλει or the natural bent of the character as modified by circumstances. Such a difference between man and man is quite admitted in the New Test., see Matth. xxv. 14—30.

7 καὶ ἐστι ἐκ—γίνονται] 'And, in one word, states of mind are formed out of corresponding acts.' This is Aristotle's famous doctrine of habits, to appreciate the importance of which, we must think of it not as a philosophic or even as a practical doctrine for modern times, but rather as a new discovery and in contrast with the state of moral science in Aristotle's own time. We can see that it arose in his mind from a combination of his penetrating observation and experience of life with the peculiar forms of his philosophy. By means of ὠνάμας and ἐνεργεία, he finds it possible to explain the formation of virtue, just as he does the existence of the world. In each act and mo-
ment at the outset of life, something which was potential in us and quite indeterminate for good or evil (dômain) is brought into actuality (énergia), and now is determinately either good or bad. This determination, by the law of habits, reproduces itself, and thus there is no longer left an ambiguous dômain, but a ēkri, or definite tendency for good or evil, is superinduced (see Essay IV. p. 238, sqq.). It will be observed that why an act tends to reproduce itself Aristotle does not inquire. He contents himself with stating the fact as a universal law, and expressing it in his own formula;—(τὸ δ’ ἐν τῷ πρᾶξιν καὶ ἀρχῇ, i. vii. 20).

Π. ι Ἐπεὶ οὖν—ἐιρήκαμεν] ‘Since then this present science does not aim at speculation, like the others (for we do not inquire in order to know what virtue is, but in order that we may become virtuous, else there would be no profit in the inquiry), it is necessary to consider with regard to actions, how they should be done; for these are what determine the quality of the states of mind which are produced in us, as before stated.’ πραγματεία is used by Aristotle and his commentators to denote the whole body of a separate science, ἡ φυσικὴ πραγματεία, ἡ πολιτικὴ πραγματεία, &c. In Plato the word only occurs in a general sense, denoting ‘business,’ ‘undertaking,’ ‘employment,’ &c. ἔπει δὲ ἄλλως. According to this classification, sciences will be divided into speculative and practical; elsewhere a third class is added, the productive. On Aristotle’s conception of the nature of Politics, see above i. ii. 8, 9, notes.

ἀδύνα] ής τῆς σκέψεως οἱ τῆς πραγματείας,

ἀδύνα γάρ] ἢς οἱ πράξεις, which are thus identified with the ἐνεργείαi of the last chapter.

2 τὸ μὲν οὖν—ὁριστά] ‘That we must act according to the right law—this indeed is a general principle, and may be assumed as a basis of our conception—but we shall discuss hereafter, both what the right law is, and how it is related to the other virtues.’ The meaning of κοινὸν is made plainer by vi. i. 2 ἐνσφαλτικῶς ἐντικομένου 

ἡσυχίασθω] The MSS. are at issue upon this word, the number of them giving ἡσυχίασθω, which reading is followed by the Paraphrast, ἡσυχίασθω
would mean, 'must stand over,' and it would be taken in close connection with ἐπιθέτου τινὸς βουτερος. But the authority of Bekker, and the usage of Aristotle, seem sufficient to establish ὑποκειτω. Cf. Eth. ii. iii. 6, v. i. 3, Phæ. i. x. i. οὐκ ὑποκειτω δὲ ἦπιν ἦλθον τὴν ὁδήγησαν κύνηγος τις τῆς ψυχῆς. Pol. vii. i. 13: τὸν δὲ ὑποκειτων τοιοοῦσιν, κ.τ.λ.

κατὰ τὸν ὁρθὸν λόγον] We find the phrase ὁρθὸν λόγον occasionally occurring in Plato, thus Phædo, p. 73 a, it is coupled with ὑποτιθημι—αι ἡ ὑποτιθημι ἤντοι ἦν ἑνὸς καὶ ὁρθὸν λόγον, where it means 'a sound understanding.' In the same dialogue, p. 94 a, it occurs with the signification 'sound reasoning,' κατὰ τὸν ὁρθὸν λόγον κατὰ ὑποτίθημα ψυχῆς μεθέξις, καὶ ἐν ὑποτιθήμα ἐστιν. Elsewhere λόγος is found joined with φρονησις. Cf. Republic. ix. p. 525 b, ἐνεργεια καὶ φρονησι καὶ λόγον. It is easy to see that ὁρθὸν λόγον was in Plato a floating idea; in Aristotle it is passing into a fixed idea, as is the case with many other terms of psychology and morals. But even in Aristotle something indefinite must still attach to a word used in such a variety of kindred senses as λόγος is. It means 'argument' (Eth. x. ii. 1, ἑπιστέτου τοῦ αἰτίων λόγοι, v. 5, πολλαὶ λόγοι), 'inference,' opposed to intuition (vi. viii. 9, διὸ αὐτὸν λόγος), 'ratio' (vi. iv. 2, κατὰ τὸν λόγον τῶν αὐτῶν), 'reckoning' (v. iii. 15, ἐν ὑποτιθημι λόγοι), 'conception' (v. vi. 5, ὁ αὐτὸς λόγος τοῦ ἀνθρώπου), 'definition' or 'formula' (v. iii. 5, ἕως τοῦ λόγου διαρεύθηκα, vi. vii. 7, τὸν λόγον τῶν τιν ἦν εἶναι λέγομα), 'theory' as opposed to 'fact' (viii. 12, λόγοι ἕπολειας), &c. In Eth. i. xiii. 9, τὸ δὲ λόγον ξένοι, it means 'reason,' but still in the present passage it seems best to avoid translating κατὰ τὸν ὁρθὸν λόγον, 'according to right reason,' as is usually done, (1) because of the article, which seems to show that λόγος is used in a general sense here, and not to denote a particular faculty of the mind; (2) in reference to the train of associations which must have been in Aristotle's mind, of 'standard,' 'proportion,' 'law,' &c. (see Essay IV. p. 256).

πρὸς τὰς ἄλλας ἀρέτας] These words cursorily imply that ὁρθὸν λόγον is an ἀρετή, if indeed τὰς ἄλλας is not to be explained as above, i. 4, note.

3—4. τὸ δὲ ἐν τοῖς πράξεωι—κυβερνητικῆ] *Now the actions and the interests of men exhibit no fixed rule, any more than the conditions of health do. And if this is the case with the universal theory, still more is the theory of particular acts incapable of being exactly fixed, for it falls under the domain of no art or regimen, but the actors themselves must always watch what suits the occasion, as is the case with the physician's and the pilot's art.' τὸ δὲ ἐν τοῖς πράξεωι καὶ τὰ συμφερόντα refers to the two classes specified, Eth. i. iii. 2, 3, τὰ δὲ κακά καὶ τὰ δικά—τοιαύτα δὲ τοιαύτην ἔχει καὶ σύγχροον κ.τ.λ. On the meaning of τὰ συμφερόντα in morals, cf. Eth. iii. i. 15, note.
Aristotle is fond of the analogy between health and morals. He speaks of health as a relative, not an absolute, balance of the bodily constitution, cf. *Eth. x. iii. 3.*

It seems an over-statement of the uncertainty and relative character of morals, to say that 'the universal theory' is devoid of all fixedness. Rather it seems true to say (1) That in some things there is an absolute, immutable law of right and wrong. This Aristotle would himself acknowledge. (Cf. *Eth. ii. vi. 19, 20.*) (2) That in a large class of cases there is a law universal for the conduct of all men, but admitting also of modification in relation to the individual. (3) That there is a sphere of actions yet remaining, indeterminate beforehand, entirely depending on relative and temporary circumstances for their determination. Aristotle however may say with truth that, on the one hand, the theory of action cannot be reduced to universal axioms, like those of mathematics; on the other hand, that it is impossible to do what the casuists would attempt, namely, to settle scientifically the miniaties of particular actions.

This is said in the spirit of the Platonic Socrates, only the uncertainty which Aristotle attributes to morals, he, from a different point of view, attributed to all knowledge.

For in illustration of immaterial things we must use material analogies.' This sentence is repeated in the *Magna Moralia* (1. v. 4) with a context that seems at first sight startling, ὅτι δὲ ἡ ἠθική καὶ ἡ υπερβολὴ φθείρει, τούτων θείωσθαι ἐκ τῶν ἡλικίων. Αἱ δὲ ἐκ τῶν ἀφάνων τῶν φανερῶν μαρτυρίας χρησταί. One might almost fancy that the writer was quoting the *Ethics* of Aristotle, Spengel, however (Transactions of Philos.-Philol. Class of Bavarian Academy, iii. 513), remarks that the true reading must be not ἐκ τῶν ἡλικίων, but ἐκ τῶν αἰσθήσεων, confirming this conjecture by the words of Stobæus, who with regard to the Peripatetic ethics says, πρὸς δὲ τὴν ἠθικὴν τοῦτον τούτων ἐκ τῶν αἰσθήσεων μαρτυρίας χρησταί. The writer therefore is only borrowing, not quoting, from Aristotle.

Taken perhaps from Plato, cf. *Eristae*, p. 134, where, to prove that philosophy is not
πολυμεθα, Socrates argues that φιλο-
γυναικεία is not πολυμεθα, but exercise
in moderation. To which his opponent
agrees (c), 'Αλλ' όμως μη τά πολλά
άλλα τά μέτρα γυναικεία τίνα εδέξαι
εμεύς τοῖς ἀνθρώποις. Τι θέτας ίτε
τά μέτρα ή τά πολλά; κ.τ.λ. There
are three points which this chapter
and the next contribute tentatively to
the theory of virtuous actions: (1)
From the analogy of life, health, and
strength, they must exhibit the law of
the balance between extremes; (2)
Virtue reproduces the actions out of
which it was formed; (3) It is essen-
tially concerned with pleasure, and is
indeed entirely based on a regulation
of pleasures and pains.

8 ἀλλ' οὖν μον-'ισχυρός] 'But
not only do the formation, the in-
crease, the destruction of these qual-
ties arise out of the same given cir-
cumstances, and by the same means,—
the exercise also of the qualities, when
formed, will be in the same sphere.
We see this to be the case with things
more palpable, as for instance, strength.
For it arises out of taking much food
and enduring much toil, and those
things the strong man is especially
able to do.' Virtue is developed out
of, and finds its development in, the
same class of ἄνθρωποι. But only
those which succeed the formation of
virtue are to be called virtuous, see
below, Chapter IV.
III. 1 Σημείον δὲ—δεῦτες] 'Now we must consider the test of a formed state of mind to be the pleasure or pain that results on doing the particular acts. For he who abstains from bodily indulgence, and feels pleasure in doing so, is temperate, but he who does it reluctantly is intemperate; and he who endures danger gladly, or at all events without pain, is brave, while he that does it with pain is a coward.' The doctrine expressed here has been already anticipated, Eth. i. viii. 12. It is an ideal perfection of virtue, in which all struggle has ceased, and nothing but pleasure is felt in the virtuous acts. Temperance and courage are pictured in this ideal way, Eth. i. xiii. 17. The terms ἀκόλουθος and δείλος above seem used merely as the contradictories of ὀφείλον and ὀδρείον, so that ἀκόλουθος has not the more technical sense which it receives farther on in the treatise. According to Aristotle's expanded doctrine, to abstain with difficulty, or to meet danger with reluctance, shows not temperance or cowardice, but only imperfect self-control.

περὶ ἴδιων γὰρ καὶ λύσας ἑστὶν ἡ ἴδια ἀρετή] 'For moral virtue has to do with pleasures and pains.' On this sentence the chapter goes off, giving proofs of what is here affirmed. These proofs, to some extent, run into each other, and the whole chapter may be accused of want of method, both in itself and in relation to the entire Ethics. But we must remember that there is still something tentative about Aristotle's theory of virtue; that psychology was still in its infancy; that Aristotle was only gradually winning his way to establish moral virtue as a state of the will in contradistinction to former systems, which had confounded it with a state of the intellect. From this point of view we may see the importance of urging the close connexion of morality with the feelings, instincts, desires, in short with pleasures and pains. The arguments are (1) Pleasures and pains induce and deter; whence Plato said that true education consists in learning to like and dislike the right things. (2) Virtue is an affair of actions and feelings, hence of pleasure and pain, which are inseparable from these. (3) Punishment consists in pain, and therefore vice, which it corrects, must consist in pleasure. (4) So much have pleasures and pains to do with the corrupting of the mind, that some have defined virtue to consist in insensibility to these. (5) There are three principles which form the motives for action: the good, the profitable, the pleasant. Of these the last is in itself the most widely extended, and it enters into both the others. (6) Pleasure is a natural instinct from infancy upwards, which it is impossible to get rid of. (7) We all, in a greater or less degree, adopt pleasure and pain as the measure of actions. (8) The very difficulty of contending with
these motives prove their claim to be the matter of virtue, and the objects of the highest science, namely, Politics. A glance at these arguments is sufficient to show that they might have been more scientifically stated. It is obvious that they are written previously to Aristotle's analysis of pleasure, as it appears in Book X. The deeper method would have been to state the connexion of pleasure with éférγeia, and of éférγeia with moral virtue on the one hand, and happiness on the other.

2 ὡς ὁ Πλάτων φησὶν] The reference is to Plato, de Legibus, p. 653 d: Λόγω τοῦτον τῶν παιδῶν παιδευτὴν ἔναι πρῶτης, αἰτθήμαν ἡδονή καὶ λόγην, καὶ ἐν οἷς ἄρθρα πρὸς τις παραγίγνεται πρῶτον, τούτο ἔναι—παιδείας δὲ λόγω τῆς παραγίγνεσιν πρῶτον παιδείας ἡδονῆς, ἡδονῆς δὲ καὶ φιλία καὶ λόγη ἡ μίως ἡ ὁρθώς ἐν ὑπερβολῇ ἐγγενέσταται, μητέρα δυνατῆς λόγου λαμβάνειν, λαβόντων δὲ τὸν λόγον συμφωνήσαι ὑπὸ λόγου, ὁρθῶς ὑπόθεσαι ὑπὸ τῶν προσνέκτων ἰδίων. ἠπῆτηθα θ' ἡ ἐμφωνια ἐξιδοκάμα μὲν ἄρθρο, τὸ δ' ἐνεπερτάς ἡδονᾶς καὶ λόγου παραβαμένου ἠπῆτηθα ὁρθῶς, ὡς καὶ μακάς μὲν καὶ χρή μικρὰς εὐθύς δὲ ἐρχεῖται μέκρι τῆς στράτευσης, στράτευσης δὲ καὶ χρή στράτευσης, τοῦτο ἀπότομος ἐν λόγῳ καὶ παιδείας προσωρίζεται, κατὰ γὰρ τὴν ἐρήμου ὁρθῶς ἐν προσωρίζεται.

4 ὡς Ἰατρεῖαι διὰ τῶν ἑπαναλυκτῶν περικοικιαί γίνεσθαι] 'But it is the
As μὴ δει ἢ ὅτε αὐτός δει] The ob must be taken immediately with δει, so as to form a positive conception, 'when it is wrong,' else of course μὴ would be required.

ἐν τοῦ λόγου] Not 'by reason,' but 'by the formula of definition.' Cf. Phys. II. ix. 5: καὶ τὸ τέλος τὸ ὁμοίως, καὶ ἡ ἀρχὴ ἀπὸ τοῦ δρόμου καὶ τοῦ λόγου. The notion of a regular formula for defining virtue occurs Eth. vi. xiii. 4: Ἰομεῖον δέ· καὶ γὰρ τὸν πάντες, ὅταν δράσονται τὴν ἀρετήν, προστίθεναι τὴν ἐξομ, εὐπάθεις καὶ πρὸς ἐστὶ τὴν κατὰ τὸν ὅρθον λόγον.

Διὸ καὶ δράσονται] Especially the Cynics, but other philosophers also, as for instance Democritus, who seems to have placed the highest good in ἀναραξία. Cf. Stobæus, Ecl. II. 76: τὸ δὲ ἐθικόν καὶ ἔθεστα καὶ ἄρμοναν συμμετέχω καὶ ἂναραξίαν καθιεῖται. Aristotle appeals to this definition, as being an evidence, though an over-statement, of the truth that virtue consists in a balance of the feelings. He appeals to a similar over-statement of the truth that prosperity is necessary for happiness, Eth. i. viii. 17.

ὁμοίως δὲ δει, ὅτι ἀπλάως] Amongst other oppositions, ἀπλάως is frequently opposed to κατὰ πρόσθεσιν, or προσθήκην, 'absolutely' opposed to 'with a qualification.' Cf. Eth. vi. iv. 3: οὐ κατὰ πρόσθεσιν... ἀλλ' ἀπλάως μόνον. This shows the force of προσθήκην above.

ὁμοίως τοῦ λόγου] 'We may begin by assuming them, as a ground for future inquiries, that this kind of excellence (i.e. moral) is concerned with pleasures and pains, and tends with regard to them to the performance of what is best, while vice is the opposite.' The chapter might have ended here, but Aristotle reopens the discussion with fresh arguments, and again sums it up in § 11.
Again, it has grown up along with us all from our infancy, and this makes it hard to rub off a feeling that is ingrained into our life. And all of us, in a greater or less degree, make pleasure and pain our standard of actions.

The metaphor, though not its precise application, seems taken from Plato, Republic, iv. p. 429 d, where the effects of right education are compared to a dye, with which the mind is to be imbued, so as to resist the detersive effects of pleasure and pain.

Again, it is harder to contend with pleasure than with anger, which, as Heraclitus says, is a hard antagonist. The saying of Heraclitus is given in full, Polites, v. xi. 31: ἄφεται γὰρ ἔρτων ἔχων οἱ διὰ θυμὸν ἐπικεφαλεῖσθαι, καθάπερ καὶ Ἡράκλειτος εἶπεν,

χαλεπῶν φῶσκων εἶναι θυμὺ μάχεσθαι: ψυχῆς γὰρ ἄνείδον (i.e. that men are ready to gratify their anger at the cost of their life). It is repeated also Eth. Eudem. ii. vii. 9. We see that Heraclitus only spoke of anger; the comparison of anger with pleasure is not due to him.

The theory thus far given of the γένος of virtue is now supplemented by the starting and answering of a difficulty. The theory, as stated, is a paradox. How can it be said that we become just by doing just things? If we do just things we must be just already, as he that performs music is already a musician. The answer to this difficulty is (1) in the arts, to whose analogy appeal is made, mere performance is no proof of art. The first essays of the learner may by chance, or by the guidance of his master (περὶ τέχνης καὶ ἀλλοῦ νοοθεμένων), ut-

ο 0 2
tain a sort of success and an artistic appearance, but the learner is no artist as yet. (2) A fortiori, if mere performance is no proof of art, much less is it any proof of morals. For the outward result in art is something sufficient in itself. But the outward act in morals is not enough. Hence those 'just acts' by which we acquire justice, are, on nearer inspection, not really just; they want the moral qualification of that settled internal character in the heart and mind of the agent, without which no external act is virtuous in the highest sense of the term. (3) As Aristotle rarely meets a difficulty arising out of his theories, without adding something in depth or completeness to those theories, so here, he deepens the conception of virtue previously given, by urging that knowledge is the least important element in it; and that philosophy without action is impotent to attain it.

3 Knowledge; purpose; purity of purpose (προσωπολέμουσι δε αὐτὰ), formed and settled stability of character, are the internal requisites for constituting a good act. Knowledge is necessary to, and presupposed in, purpose. We are told presently that knowledge is of slight or no avail for virtue, while the other elements are all in all (προς δε το τας ἁρετας το μεν εἰδεναι μικρὸν ἢ οὐδὲν λέγεις, τα το δ' ἀλλα αυ μικρὸν ἀλλα τα των δύναται). This is a reaction against the Socratico-Platonic doctrine that virtue consists in knowledge; but Aristotle only means to say—that knowledge, if taken by itself, if separate from the will, if merely existing in the intellect, is of no avail. We find after- wards a strong statement of the opposite view,—that he who has φρονησι has all the virtues. Ἐκθ. vii. xiii. 6, vii. ii. 5.

προσωπολέμουσι δε αὐτὰ] Here would have been the place for introducing an allusion to the doctrine of moral obligation, had such formed part of Aristotle's system. But he says not that 'good acts must be done with a feeling of duty,' but that 'they must be chosen for their own sake.' A
good act must be chosen, loved, and done because it is beautiful (ὅτι ἠλλοι). Aristotle does not analyse further than this.

No point is more insisted on in these Ἐθικές than the stability of the moral ἔξεις, when once formed. Cf. i. x. 10, i. x. 14, v. ix. 14.

But most people, instead of doing these things, take refuge in talk about them, and flatter themselves that they are studying philosophy, and are in a fair way to become good men; which conduct may be likened to that of those sick people who listen attentively to what their physician says, but do not follow a little of his prescriptions. Such a regimen will never give health of body, nor such a philo-

V. With this chapter commences a new division of the Book, in which a formal definition of virtue according to substance or genus, and quality or differentia, is given. We find the conception of this kind of definition already existing in Plato. Cf. Μένο, p. 71 b: ἐμαντών κατακλύσομαι ὡς οἴκησιν περὶ ἀρετῆς τῷ παράσιν. ὃς οὖν ἀληθῶς τὴν ἔστιν, πᾶσιν ἰδοὺς γενομένους. Like other parts of logic it was elaborated and made systematic by Aristotle. See Essay III. In the present chapter, in essence of virtue is established, that it is a ἔξεις, or formed state of mind. This is arrived at
by assuming that every mode of the mind must be one of three things, either a feeling, a faculty, or a state, and by proving that virtue is neither a feeling, nor a faculty; whence by the exhaustive process it remains that it must be a state of mind. The form of the argument here is the same as that of Eth. 1. vii. 9—14, where it is demonstrated what is the proper function of man, and that of the argument in Republic 16. p. 426—433, where the nature and province of justice are determined. Aristotle does not here explain why he assumes that the modes of mind are only three; but the assumption no doubt rests upon his doctrine of Quality. Virtue is a quality (t. vi. 3: καὶ ἐν τῷ πολὺ αὐτῷ), and the category of Quality is subdivided into four divisions (Cat. vii. 3), (1) ἔννοια and ἀναφορά. (2) διά τι ψυχῆς φύσις ἃ δύναμιν λέγεται. (3) καθηκονικά ποιήματα. (4) σχῆμα καὶ μορφή. Of those the last is in the present case excluded by its own nature, and it is only necessary to eliminate two of the remaining three. Apart from the subdivision of the category, the threefold partition of the mind might be defended upon its own merits; for páthos may be in a sense identified with ἐνθυμία, and ἔννοια is a sort of determinate δύναμις, a δύναμις, so to speak, on the other side of ἐνθυμία. Granting to the human mind the power of development, and of self-determination by the law of habits, it follows that every mode in which such a mind exists, must either be its innate, undeveloped, and potential faculties, its moments of consciousness, or its acquired and formed tendencies and states.

The arguments to prove that virtue is not a páthos, are (1) an appeal to language. We are called ‘good’ or ‘bad’ on account of virtue or vice; not on account of isolated feelings. (2) A passion is by its nature involuntary; but virtue implies deliberate choice (προαίρεσις). (3) An appeal to language; we speak of being ‘moved’ in regard to the feelings; of being ‘disposed’ in regard to virtue or vice. Again, for the same reason, virtue is not a δύναμις. (1) Because we are not ‘called good’ for our faculties. (2) Because a faculty is something natural and innate (δυναμεὶς μὲν ἐσμέν φῶς), and virtue is not.

2 λέγω δὲ—οὖν I mean by emotions, desire, anger, fear, boldness, envy, joy, friendship, hatred, longing, emulation, pity; in short, everything that is accompanied by pain or pleasure. I call those faculties, by reason of which we are said to be capable of feeling emotions, as, for instance, capable of being angry, of suffering pain, of feeling pity; and I call those states by which we stand in a certain relation, good or bad, to the emotions; as, for instance, with regard to anger, we are in a bad condition if our anger is too violent, or too slack, in a
good one, if we hit the happy medium.' Aristotle contents himself with indicating what he means by these different terms, instead of giving anything like a scientific definition of them. Thus he gives specimen of the feelings in which there is no attempt at classification, 'desire' being a wider term than most of the others mentioned, 'envy' and ' emulation' being perhaps different modes of the same feeling, &c. The words used are throughout informal, τὰ ἐν τῷ ψυχῆ γινόμενα—οἴς ἑντεύχει ἡδονή—καὶ ἐν δυναμεῖ—καὶ ἐν παθητικῷ. It is easy to see that a deeper psychology might have stated all that is here said in a different and better way. In his account of ζέως there is a play on words which it is impossible to render, ζέως—καὶ ἐν ζευγμῷ. Cf. the use of πῶς ἐχοῦν in § 3 of the preceding chapter.

This is an extreme statement, in opposition to the Socratic doctrine that virtues were φρονήσεως, cf. Eth. vi. xiii. 3. Aristotle immediately qualifies it. There has been no proof of this position as yet.

διακειμένων ποι] This word is very common in Plato (as in other Greek). Cf. Rep. ἦν 331 π.: ἀκελαστον τῶν οὕτω διακειμένων, &c. In the treatise on the Categories, which bears Aristotle's name, it is made to imply a διάθεσις in contradistinction to ἐχων, which implies a ζέων. Ch. viii. 5: οὶ μὲν γὰρ ζέως ἐχοῦσε καὶ διάκεισθαι τέ ποι καὶ αὐτῶς, οἱ δὲ διακειμένων οὐ πάντως καὶ ἐξὶν ἔχομαι.

VI. Having stated the generic conception of virtue (τὶ ἐστὶ)—that it is a developed state of mind, Aristotle now proceeds to determine it more exactly (πολα τι). He lays the ground
for this more accurate determination, by giving a summary (borrowed from Plato) of the characteristics of ἀρετή. Every excellence is the perfection of an object, and of the functions of that object. Thus human excellence (or virtue) will be the perfection of man, and of the functions of man. This leads us to inquire more narrowly what are the characteristics of a perfect ἔργον (the word is ambiguous, denoting 'work of art,' or 'product of nature,' as well as 'function' or 'province'). From the conception of quantity, whether continuous (εὐκέχης) or discrete (διασχέτων), we get the conception of more, less, and equal, or excess, defect, and the mean, which in the case of human action must not be arithmetical but proportional (§§ 4—7). Now a glance at the arts shows us that the art of an artist and the perfection of a work consist in the attainment and exhibition of the relative mean, so that nothing can be added or taken away without spoiling the effect (§§ 8—9). According to this analogy, virtue, which, like nature, is finer than the finest art, aims at the mean, avoiding excess and deficiency in feeling and action (§§ 10—13). To this account of the essence of virtue witness is borne by the Pythagorean doctrine, that right is one, and wrong manifold (§ 14).

We need only qualify our theory and our definition of virtue, by adding that it is from an abstract point of view alone we can call virtue 'a mean state.' From a moral point of view it is an extreme that is utterly removed from its opposite, vice (§§ 15—17), and we must not apply the notion of the mean and the extremes to every act. Some acts are in themselves extremes, as, for instance, acts of crime, and it will be impossible to find a mean in such as these (§§ 18—20).

2 ὑπέρ οὖν ὡς — πολέμοιον | 'We must commence then by asserting that every excellence both exhibits that thing of which it is an excellence in a good state, and also causes the perfect performance of that thing's proper function, as, for instance, the excellence of an eye makes the eye good, and also the performance of its function, for we see well from the excellence of the eye. So, too, the excellence of a horse makes him both a good horse, and good in his paces, in bearing his rider, and in standing a charge.' This is taken almost verbatim from Plato, Repub. r. p. 353 B: 'Ἀρ' ἐν ποτε ἄρετα τοῦ ἄνθρωπον ἐργον καλῶς ἀπεργάσασθε μη ἐχωμα τὴν ἄνθρωπον οἰκεῖαν ἄρεταν, κ.τ.λ. An illustration had been drawn from the horse and its excellence before in the same book, p. 335 B.

3 εἰ δὲ τοῦτ' ἐστὶ πᾶντων ὀντων ἔχει,
VI.] 

HOKWN NIKOMAEION II. 

ται καὶ ἀφεὶς εὔ το ἑαυτοῦ ἔργον ἀποδώσει. πῶς ὅσ τοι ἰσται, ἢ γὰρ μὲν εἰρήκαμεν, ἢ ἐμὲ καὶ ὃδε ἐσται φανερών, ἡν ἡθαρτήσωςειν τοῖς τις ἐστὶν ἡ φύσις αὐτῆς. ἐν παντὶ ὡς συνεχεί καὶ διαρετεύσει ἐστὶν λαβεῖν τὸ μὲν πλεῖον τὸ δὲ ἐλαττὸν τὸ δὲ ἱσον, καὶ ταῦτα ἢ κατ᾿ αὐτὸ τὸ πράγμα ταῦτα ἢ πρὸς ἡμᾶς τὸ δὲ ἱσον μὲσον τὰ ὑπερβολικὰ καὶ ἐλλείψεως. λέγων δὲ τοῦ μὲν πράγματος μέσου τὸ ἱσον 5 ἀπέχουν ἀφ’ ἐκκέτου τῶν ἄκρων. ὅπερ ἐστὶν ἐν καὶ ταύτων πάσιν, πρὸς ἡμᾶς δὲ ὁ μήτε πλεῖον οὐκ ἔλλειπε, τούτῳ δὲ οὐχ ἐν, οὐδὲ ταύτων πάσιν, ὡς εἰ ταῦτα πολλὰ 6 τὰ δὲ δύο ὁλίγα, τὰ δὲ μέσα λαμβάνοντι κατὰ τὸ πράγμα ἱσον γὰρ ὑπερέχει τε καὶ ὑπερέχεται, τούτῳ δὲ μέσον ἐστίν 7 κατὰ τὴν ἀριθμητικὴν ἀναλογίαν. τὸ δὲ πρὸς ἡμᾶς οὐκ ὀντως λυπτέον· ὃ γὰρ εἰ τῷ ὑδάτι μυκὴν φαγεῖν πολὺ δύο δὲ ἱσον, ο ἀλέητης ἢ καὶ μὴς προστάξει· ἔστι γὰρ ἱσος

καὶ ἡ τοῦ ἀθρόου ἄρετὴ κ.τ.λ.] 

Aristotle treats of human virtue as part of a general law by which all natural objects fulfill their several functions, and each in accordance with its own proper excellence. He next passes to the analogy of the arts, though he regards virtue as higher than them, and more akin to nature. (ἡ δ’ ἀρετὴ πάσης τίχους ἀνθρωπετρά καὶ ἀμείων ἐστίν, ἀριθμὸν καὶ ἡ φύσις.) In the present passage we have again to do with the conception of the ἔργον of man; see above Eth. i. vii. 14.

4. τῶς δὲ τούτων ἐσται, ἢ γὰρ μὲν εἰρήκαμεν] If any special passage is referred to, it must be ii. iv. 3. 

ἐν παντὶ δὲ συνεχεί καὶ διαρετεύσει] ‘Now in all quantity both continuous and discrete.’ The terms here are not meant to go together, as if it were, ‘In all that is continuous, and at the same time capable of division;’ but the two forms of quantity are referred to, about which we read Categories vi. 1: τοῦ δὲ πάτον τὸ μὲν ἔστι διαρετέων, τὸ δὲ συνεχείς.—Ἐστί δὲ διαρετεύσεως μὲν οὖν ἀριθμὸς καὶ λόγος (a

word), συνεχείς δὲ οὖν γραμμῆς, ἐκπούσας, σώμα, ἢ γὰρ παρὰ τῶν ἀριθμῶν καὶ τῶν τόπων: Cf. Politics i. v. 3: ἔστε γὰρ ἐκ πλείων συνέστηκεν.—ἔστε ἐκ συνεχῶν εἰς ἐκ διαρετεύσεως. De Caelo, i. i. 2.

5. λέγω δὲ τοῦ μὲν πράγματος—ἐλλείπει] ‘By an objective mean, I understand that which is equidistant from the two given terms, and which is one and the same to all, and by a mean relatively to the person (ἤτος ἡμᾶς), I understand that which is neither too much nor too little.’ In this, as in many other places of Aristotle, we desiderate a formula expressive of the opposition between the objective and subjective. Not that there is a want of clearness here, but if he had possessed the formula, he would have applied it here, and would by it have solved many an ambiguity elsewhere existing.

ἐν κατὰ τὴν διαρετεύσειν ἀναλογίαν i.e. ‘Arithmetical progression,’ opposed to ‘geometrical proportion,’ which consists of four terms, cf. Eth. v. iv. 3.
καὶ τὸ τοῦτο πολὺ τῷ ἀρχαῖῳ ἡ ὀλίγῳ. Μίλων μὲν γὰρ ὀλίγῳ, τῷ δὲ ἀρχαῖῳ τῶν γυμνασίων πολὺ. ὁμοίως ἐπὶ ὄρωμα καὶ πάλιν. οὕτω οὐ πάντες ἐπιστήμοναι τὴν ὑπερβολὴν μὲν καὶ τὴν ἐλειαὶν φεύγει, τὸ δὲ μέσου ζητεῖ καὶ τοῦθεν αἵρεται, μέσον δὲ οὗ τοῦ πράγματος ἀλλὰ τὸ 9 πρὸς ἡμᾶς. εἰ δὴ πᾶσα ἐπιστήμη οὕτω τὸ ἔργον εἰ ἐπι-
τελεῖ, πρὸς τὸ μέσον βλέπουσα καὶ ἐκ τοῦτο ἄγουσα τὰ ἔργα (ὁδὲν εἰσέχωσιν ἐπιλέγειν. τοὺς εὐ ἐχουσιν ἔργοις ἀπὶ ὕπτελετον ἐστὶν ὡς προσθέσθαι, ὡς τῆς μὲν ὑπερβολῆς καὶ τῆς ἐλειαίης ἐφικτότης τὸ εὖ, τῆς δὲ μεσοτήτος σω-
ξοῦσης), οὐ δὲ ἀγαθὸν τεχνύται, ὡς λέγομεν, πρὸς τοῦτο βλέπουσες ἐργάζονται, οὐ δὲ ἀρετὴ πάσης τέχνης ἀκριβε-
στερὰ καὶ ἀμέλειαν ἐστὶν, ὡς περὶ καὶ ἡ φύσις, τοῦ μέσου ἀν
10 εἰς στοχαστικὴ. λέγοι δὲ τὴν ἡθίκην: οὕτω γὰρ ἐστὶ
t/ περὶ πάθη καὶ πράξεις, ἐν δὲ τούτοις ἐστὶν ὑπερβολὴ καὶ ἐλειαίης καὶ τὸ μέσον. οὐν καὶ φοβηθήσατε καὶ βαροῦσαι καὶ ἐπιθυμήσατε καὶ ὅργισθήμεναι καὶ ἐλεγθήμεναι καὶ ἀλος ἡσυχ-
καὶ λυπηθήμενοι ἐστὶν καὶ μάλλον καὶ ἦττον, καὶ ἀμφο-
11 τερα οὐκ εὖ τὸ ὑπὸ τε δεῖ καὶ ἐφὶ ὡς καὶ πρὸς οὐκ καὶ οὐ ἐνεκα καὶ ὡς δεῖ, μέσον τε καὶ ἀμήστον, ὡς ἐστὶ τῆς ἀρετῆς. ὁμοίως δὲ καὶ περὶ τῶν πράξεων ἐστὶν υπερβολὴ

Μίλων μὲν γὰρ ὀλίγον] This illustration may remind us of the humon-
rous turn in Plato’s Republic, p. 338 c, where, on Thrasymachus defining jus-
tice to be τοῦ κρατίστου εὐμφάνοι, Socrates answers, ὡς ἡμοίους, τί ποτε λέγεις; οὐ γὰρ τινὸ τὰ ταὐτὰ φήμε; εἰ δὲν ἄρα καὶ διαφόροι, τῶν ἄλλων καὶ ἄλλων καὶ ἃ τῶν ἄλλων ἐνεκα καὶ μάλλον καὶ ἦττον ἐνεκα καὶ ἀμηστοῦν εὐμφάνοι ἡμαὶ καὶ ἠμαίνον. Cf. Eukleia, p. 134. quoted above on II. 6.

9 εἰ δὴ—ἐργα 11 ἄριστον καὶ ἀμήστον ἐπ' ὅλους τῶν ἄλλων τεχνῶν καὶ ἐπιστημῶν, οὕτω γὰρ γραφεῖν εἰρετεῖν ἐκ τῶν υπερβαλλόντων τότε τῆς παθητικῆς ἐσχον τῷ χρόνῳ. ὡς εἰ διαφέρον τὸ κάλλος. And on the general doctrine of ἀρετῆς, its history, and its applications, see Essay IV.

10 λέγον ὑπὸ τὴν ἡθικήν] The intellectual ἀρετai are not μεσότηται, for this simple reason—that they are λεγόν; the ‘laws’ or ‘standards’ of the balance which is to be introduced into the passions.

11 τὸ δ’ ὑπὸ τε—ἀρετῶν] ‘But to have these feelings at the right time, and on occasion of the right things, and towards the right persons, and with the right object, and in the right manner, this is the golden mean and the highest excellence, names which are proper to virtue.’ From the men-
tion of all these qualifications it is
easy to see that Aristotle means by his μέσον to establish something more than a merely quantitative difference between vice and virtue.

14 ἦτα τὸ μὲν ἀμαρτάνει—μοναξίας] 'Again it is possible to err in many ways (for evil belongs to the infinite, as the Pythagoreans figured, and good to the finite), but to do right is possible only in one way.' See Essays II. and IV. The authorship of the verse ἔσθολοι μὲν γὰρ κ.τ.λ. is unknown.

15 ἦσσιν ἄρα—ἀρετεῖα] 'Virtue, therefore, is a developed state of the moral purpose in relative balance, which is determined by a standard, according as the thoughtful man would determine.' Spengel regards ἀρετεῖα as a mere misprint in Bekker's editions for ἀρετεία, which all former editions had. It is the με-

σοτής, and not the ἕτε, which is determined by λόγος. In two places already, Eth. ii. iv. 3, and ii. v. 4, we have met with the tacit assumption that virtue implies προαίρεσις. This is justified by the account of προαιρεσις, and its relation to action, in the next book. The other terms of the definition have been sufficiently established in the progress of this book. The reference to the φύσιμος as an impersonation of the 'law' or 'standard' of reason is a necessary modification of what would else be an entirely relative, individual, and arbitrary, theory of virtue. The 'thoughtful man' stands as the representative of the absolute reason of man manifested in the individual consciousness.

17 Διὸ κατὰ μὲν τὴν οὐσίαν—ἀκρότητι]
Virtue, therefore, if viewed in the light of its essence and its constitutive conception, is a mean state, but with respect to supreme excellence, and rightness, it is an extreme. This passage implies that the term *meióntas* is an abstract and metaphysical expression for the law of virtue, estimated by the understanding (though doubtless the deepest view attainable); but that viewed in relation to the good, or (as we should say) from a moral point of view,—virtue is no mean state lying between vices (as if virtue were a little less vice, and vice a little more virtue), but an extreme, that is, utterly removed from, and opposed to, vice. It is a profound remark, showing the balance in Aristotle between an abstract and a concrete view of morals. With regard to the terminology here employed, the word ὀνείρα is, as Aristotle himself tells us, to a certain extent ambiguous (cf. *Metaph. vi. iii. 1* : λέγεται ἄν ἡ ὀνείρα, εἰ δὲ πλεονασθῇ, ἄλλα ἐν τῇ προσώπῳ γε μᾶλλον τῷ γάρ τῷ τί ἢν ἐλώει καὶ τῷ καθέδρῳ καὶ τῷ τέμνει ὀνείρα δοκεῖ ἔσται ὄκτων καὶ τῇ προσώπῳ τούτῳ τῷ ὄκτων καὶ τῷ καθέδρῳ). It is made definite however in the present place by the addition of the phrase καὶ τῷ λόγῳ τῶν τί ἢν ἐλώει λέγοντα, which may be regarded here as an explanation of ὀνείρα. On λόγος—λέγοντα, cf. De Motu Animalium, x. i : κατὰ μὲν οὖν τῶν λόγων τῶν λέγοντα τοῖς αὐτῶν τῷ κινήσει. The formula τί ἢν ἐλώει, like other leading parts of Aristotle’s philosophy, appears in his works as already established. Though no trace of it is to be found in Plato, familiarity with its use is presupposed by Aristotle, and no account of its genesis is given. Its metaphysical import is discussed in *Metaph. vi. iv.—xi*, from which we gather (1) that τί ἢν ἐλώει implies the essential nature of a thing (ἐκανθάντω καὶ λέγεται καθ’ αὐτῷ) to the exclusion of all that is accidental; (2) that it is the definition of a thing, but not of all things, for it excludes all material associations, hence that to a conception like ἑρμόκησις you cannot assign a τί ἢν ἐλώει; (3) that it is no mere abstraction, but closely connected with individual existence, and implying what the Germans call Daseyn; hence it is separable from the καθέδρῳ or universal element in a thing,—it implies this, but also something more. From the concreteness of its nature, it also differs from the Platonic idea, with which it has much in common, being the immaterial, primal, and archetypal law of the being of things; (4) ‘The knowledge of a thing,’ says Aristotle, ‘consists in knowing its τί ἢν ἐλώει’ (Metaph. vi. vi. 6). With this important conception in his theory of knowledge and of existence we may compare to some extent the ‘Forms’ of Bacon, which were no doubt borrowed from it. But fully to comprehend the τί ἢν ἐλώει implies mastering the metaphysical system of Aristotle. With regard to the grammar of the formula we are left to conjecture, and accordingly at least two erroneous explanations have been given. (1) That of Alexander (Aphrodit. Top. 1. (Brandis, Scholia, p. 256 a. 43), that ἢν is simply used for ἐστὶ, whereas we find a frequent contrast between the formula τί ἢν and τί ἐστι. (2) The whole phrase has been translated ‘substantia quae est, etiam praeterita,’ as though τί ἢν could be used for ἄτομο ἢν. Τί ἢν is of course a question, and has been
represented by the term Quidditas in the Scholastic Latin. The preterite δὲ appears used to express the prior, i.e. the deeper and more essential nature of a thing. 'What was the essence of the thing?' (i.e. before its present individual manifestation). Cf. Metaph. vii. 6: 'ὅτε καὶ ὑπέρβολη καὶ ἐλλειψις μεσότης καὶ ὑπέρβολης ὑπέρβολη καὶ ἐλλειψις ἐλλειψις.' δὲ περὶ δὲ 20 συνειδήσεως καὶ ὑπέρβολης ὑπέρβολη καὶ ἐλλειψις διὰ τὸ τὸ μέσον εἶναι παρὰ ἄκρον, ὑπέρβολης ὑπέρβολη καὶ ἐλλειψις μεσότης τοῦ ὑπέρβολης καὶ ἐλλειψις, ἀλλὰ ὡς ἰὸν πράττεται ἡ ὑπέρβολη ὑπέρβολη καὶ ἐλλειψις μεσότης εἶναι, ὡμέν δὲ τούτῳ μὴ μονον καθόλου λέγεσθαι, ἀλλὰ καὶ 7

VII. Aristotle now passes on to the exemplification of his general law of virtue in the various separate virtues. He gives accordingly a list of virtues, and shows that they are severally mean states between various extremes. This list forms a table of contents for Books III. and IV., which treat of the virtues here mentioned, and in the order here given. The question arises—upon what principle is this list formed? We find at once that Aristotle has resorted to experience. He has not contented himself with applying his law to the previously recognised divisions of virtue. He has abandoned the old enumeration of four cardinal virtues, given in Plato's Republic, p. 428 (and on which most of the reasoning in
that book depends), namely, courage, temperance, justice, wisdom; but these all reappear in his list, only not on the same level with each other. Wisdom is divided into φρόνησις and σοφία, of which the first is made the standard of moral virtue, and the other stands apart as a perfection of the pure intellect. Justice is separated from other practical virtues, as being something externally determined (cf. Eth. v. v. 17). Plato gives, in the Protagoras, p. 349 b, another list of five virtues, holiness (δικαιοσύνη) being added to the other four; this answers to εὐσεβία, which is frequently mentioned as a virtue by the Socrates of Xenophon. Aristotle omits it altogether, probably on account of the separation he made between ethics and religion. With this exception, Aristotle’s list of virtues implies the same view of life as Plato’s, only it goes more into detail and aims at more completeness. In the present chapter ten virtues are enumerated, to which are added modesty and indignation, two mean states in the feelings; and justice is mentioned as something to be treated of separately. In departing from the unity of a law to enumerate its exemplifications, there must always be something arbitrary. Why so many and no more? It would seem as if Aristotle applied his principle to the virtues ready at hand, and then afterwards believed in his own list as complete. (Cf. Eth. ii. vii. 9, γῆν δὲ περὶ τῶν λατρευτ. ii. vii. 11, βασίλειον ὄν ἐν κ.τ.λ.; iii. v. 23, ἡμι τῇ ὀρθῇ δῆλη καὶ πάντα εἰπώ.)

In the Rhetoric i. ix. 5—13, we find a list of virtues (or, as they are called, Μέρη ἀρετῆς) given, which is identical with the present (not containing, however, φιλοσοφία, εὐσεβία, ἀλήθεια, φίλα), μέρη δὲ ἀρετῆς δικαίωσιν, ἀληθεία, σοφία, μεγαλοφυΐα, μεγαλαφωγία, ἐκευδαφότης, πράσινη, φρόνησις, σοφία. Of those omitted, the first may be said to be included in μεγαλοφυΐα, while the other three possess only a minor degree of moral importance. Even here Aristotle seems to set them on a somewhat lower footing than the rest.

1 κενότεροι] The MSS. vary here between κενότεροι and κοινότεροι. A similar variation is found Eth. i. viii. 6, where the readings are πολλά κατα and πολλά κατα. Bekker has decided against the majority of MSS. in favour of κενότεροι. The Paraphrast however supports the other reading. He renders the passage, τῶν γὰρ περὶ τὰς πράξεις λόγον οἱ μὲν καθολικοί κοινότεροι καὶ πλείον ψάρμαζονον; οἱ δὲ μερικὸν ἀληθειώτεροι. Dr. Cardwell accordingly reads κοινότεροι, which seems most natural, and is supported by the best MSS. Kṣ and L of Bekker. Whichever reading we take, the general meaning is not affected. κενότεροι, which would be a term of disparation, is well illustrated by Eth. Eth. i. vi. 4: πολλάκις λαϊκώνοι λέγοντες ἀλληλον οὐν τῆς πραγματείας καὶ κοινός. Κοινότεροι means 'more general,' 'of wider application.' Cf. Eth. ii. ii. 2: οὐ μὲν οὖν κατὰ τὸν ὀρθὸν λόγον κατὰ πράξεις καὶ πράσινη. According with this reading we may translate the passage Διϊδα—διαγράφησις as follows: 'This principle however must not only be stated universally, but also we must apply it to particular cases; for in theories about moral actions universal statements are it is true of wider application, but particular ones are more real. For actions
are concerned with particulars, and it is necessary that our theories should be borne out when applied to these. Let us take our instances then from the table of the virtues.

ἄληθινωτέρως, 'more real,' as being more concrete and more definite. Plato would have said the universal is more real; here, and in Categories v. 8, it is said that the particular is more real than the universal. In the Politics, i. xiii. 10, Gorgias is praised for enumerating the separate virtues, while others contented themselves with general definitions. Ἐκ τῆς διαγραφῆς] Ὡς ἐν τῷ ἐν τῇ Ἑθικῇ Ἔθελος Ἐκ τῆς Ἑθικῆς Ἐκ τῆς Ἑθικῆς. 2 ἢ μὲν τῇ ἄρμης κτλ.] It is a sign that Aristotle is here only working his way to his theory of the mean, that he at first speaks as if there were excess and defect of both the two opposite principles, by the balance of which virtue is constituted. This would make four vices round each virtue. But it is obviously more simple to speak of each virtue as a balance of a positive and a negative tendency: which view he afterwards adopts, though he retains the present...
ὁ ἀνέλειψις ἐν μὲν λαγὼς ὑπερβάλλει ἐν δὲ προσεί 5 ἐλείσις, γινὸν μὲν οὖν τούτῳ καὶ ἐπὶ κεφαλαίῳ λέγομεν, ἀρκοῦμεν αὐτοῦ τούτῳ· ὦστενον δὲ ἀκριβέστερον περὶ 6 αὐτῶν διαφωνήσεται. περὶ δὲ τὰ χρήματα καὶ ἄλλα δια-
θέσεις εἰσί, μεσότης μὲν μεγαλοπρέπεια (ὅ γὰρ μεγα-
λοπρέπης διαφέρει ἐλευθερίαν· ὁ μὲν γὰρ περὶ μεγάλα, ὁ 7 δὲ περὶ μικρά), ὑπερβολὴ δὲ ἀπειροκαλία καὶ βαθύσια, ἐλλειψις δὲ μικροπρέπεια· διαφέρουσι ὁ αὐται τῶν περὶ 8 τὴν ἐλευθερίατηα, τῇ δὲ διαφέρουσι, ὦστενον ῥηθῆσται.

refinement with regard to courage in the fuller account of this virtue in Book III.
5 ὦστενον δὲ ἀκριβέστερον] All details with regard to the several virtues may be accordingly reserved for consideration under Books III. and IV.
6 ἄλλα διαθέσεις] 'other dispositions.' The word is used here as a synonym for ἔχειν, though in Categories viii. 1. ἔχει is distinguished from διάθεσις. Ἠν μὲν οὖν εἰδὸς ποιήσεως ἐχει καὶ διάθεσις λεγόμενοι διαφέρει δὲ ἔχει διάθεσις τὸ πολὺ χρονίστερον εἶναι καὶ μοναχότερον. In the same way, διακεισθαι is there opposed to ἔχειν, whereas, Eth. ii. v. 4, it is used as equivalent to it.
9 κατὰ τὸν ὑγιήσιν τὸν τρόπον] According to the method which has hitherto guided us, τὸν κ.π.α. (cf. § 5). The same phrase occurs Politics i. i. 3: Δήλον δὲ ἦσται τὸ λεγόμενον ἐπισκοπούσι κατὰ τὴν ὑγιήσιν μέθο-
σχεδόν δὲ ἀνοιχτῶν ὄντων αὐτῶν τὸν μέσον πράγμα τέλος τῆς μεσοτήτας πρατήτης καλέστωμεν· τῶν οἱ ἄκραι, οἱ μὲν ὑπερβάλλον ἔγχυεσιν· ή δὲ κακία ἐγκατάθεται, οὗ οἱ ἐλλειποίοις ἀκρατοίς, οὗ οἱ ἐλλειπεῖσιν ἀγριότατοι τις· εἰ δὲ τοῦτο ἐπιτίθεμε· ή μὲν ἐπὶ περὶ τάλαμοι τὸ ἐν αὐτῶις, αἱ δὲ περὶ τὸ θύμιο τοῦτον δὲ τὸ μὲν ἐν παιδία οὗτος τὸ ἐν πάσι τοῖς κατὰ τὸν βίον. ἐγιγνεν δὲν καὶ περὶ τούτων, ἵνα μᾶλλον κατίδομεν· οὐ δὲν παίδων· οἱ μὲν ἐπὶ παινειῶν, τὰ δὲ ἀκρας οὔτ' ὀρθά όντ' ἐπανεῖκα ἀλλὰ ἔστεκα. ἔστι μὲν οὖν καὶ περὶ τούτων τὰ πλεία ἀνόμωμα, πειρατέον δ', ἀνάπηρον καί ἐπὶ τῶν ἀλλων, αὐτῶν ὑμνιστοποιεῖν σαφήνειας ἐνεχεῖ καί τῷ εὐπαρακληθεῖτο. περὶ μὲν οὖν τὸ ἀληθὴς οἱ μὲν μέσος ἀληθὴς τις καί οἱ μέσοτος ἀληθείας αδικίας, ή δὲ προσποιεῖσθαι οἱ μὲν ἐπὶ τὸ μεῖζον ἀληθείας καί οἱ ἔχων αὐτὴν ἀληθείαν, οὗ ἐπὶ τὸ ἐπάνω εἴραμεν καί εἴραν. περὶ δὲ τὸ θύμιο τὸ μὲν ἐν 13 παιδία ποὺ μὲν μέσος εὐπαρακληθεῖσθαι καί οἱ διὰ τῆς ἐυτράπελίας. ή δ' ὑπερβαλλεῖ βαρυμολογία καί οἱ ἔχων αὐτὴν βαρυμολογίαν, οὗ ἐλλείποιοι ἀγριούκος τις καί οὗ ἐξίσος ἀγριοίκητα. περὶ δὲ τὸ λοιπὸν θύμιο τὸ ἐν τῷ βίῳ οἱ μὲν καί διὰ τῶν ἔναν χλώς καί οὗ μεσοτῆς φύλας. δ' ὑπερβαλλούσας, εἰ μὲν ὀδύναμος ἐνεχεῖ, ἀρετοκρος, εἰ δ' ὀφελείας τῆς αὐτοῦ, κόλαξ, οὗ ἐλλείποιοι καί
It is far greater than has ever been exercised by any one man beside.

14—15 Aristotle winds up his list by adding Άληθεία and Νέμεσις, which he does not consider virtues, because they are not developed states of mind, but he mentions them, because he discovers the law of the balance (μεσότητα), existing even in these natural instincts. There is something peculiarly Greek in the conjunction of these two names. In Greek mythology they are personified and seem to represent the natural and almost indestructible ideas of justice in the human mind. Hesiod speaks of these two goddesses as being the last to clothe themselves in white raiment and to leave the earth. (Works and Days, 198.) In the fable which Plato puts into the mouth of Protagoras these qualities are said to have been sent down to man as an amelioration of his previously wretched condition, without society or the political art (Plato, Protagoras, p. 322 c. where

by Eudemus (π. iii. 4), who, in his list, writes φθονός, ἀνδρόμεν, νέμεσις. Of course the opposite to φθονός must be ἀναισθησία τις. Socrates in Xen.

Memor. iii. ix. 8 defines φθονός as it is here defined. Μιὼν ἐφ’ ἄρον 

τούτον ἔτι ταῖς τῶν ἐφ’ ἐνεργίας ἀναισθησιν. Plato does not separate

envy and malice, cf. Philebus, p. 48 B:

'Ο φθονόν γε ἐπὶ κακίας τοῖς τῶν καλοῖς ἡγομένος ἀναισθησίαν. Socrates is there arguing that φθονός being granted to be a painful feeling, it yet constitutes the chief element in comedy, so that in comedy there is a mixture of pain with pleasure.

16 ἀλλὰ περὶ μὲν τοῦτων — εἰσιν']

'But about these points in the first place we shall have another opportunity of speaking; in the second place, about justice, since the term is used in more senses than one, we will separately (μετὰ ταύτα) define it and show how the two species of it are severely mean stated.' This passage gives accurately enough beforehand the order of subjects for Books III. and IV.; the word ἀλλοθι seems to show that he has in view the interruption of the argument by the discussion upon will, at the beginning of the Third Book. The separate treatment of justice is also announced. But it can hardly be said that the promise περὶ ἐκατέρας ἐρόμεν κ.τ.λ. is exactly fulfilled in Book V. The two kinds of justice, here referred to, are

(1) Justice, in the Platonic sense,—all virtue. (2) Justice, in a narrower sense,—fair dealing with regard to property. Cf. Eth. v. i.

† ὁμιλοῦσ εὐθεῖα πρὸς τῶν λογικῶν ἁρετῶν] This passage is obliterated, because of the term λογικός, which never occurs elsewhere in Aristotle or Eudemus, as applied to the δια- 

νοστικοῖ δημοταi—secondly, because of the sense, since Aristotle could not possibly say that he meant to show how the intellectual excellences were

μεσοτητικοί—thirdly, because of the extreme likelihood of an interpolation here.

VIII. A new conception is now developed of the relation between a virtue and the extremes lying on each side of it, and that is, the conception of 'contrariety,' or mutual repulsion and exclusiveness between the several terms. The extremes are opposed each to the other, and both to the mean. This addition tends yet further to raise the moral distinctions from being mere distinctions of quantity, into being distinctions of kind. With logical inconsistency, though with thorough truth, Aristotle proceeds to point out that one extreme is generally 'more contrary' to the mean than the other, either because of a greater dissimilarity to virtue in
the tendency itself, or from our following a natural bent and pushing out the tendency to extravagance.

2 ὁ γὰρ ἀνδρεῖος—διώλεις.] 'For the brave man appears rash in comparison with the coward, but a coward in comparison with the rash man.' Of course oppositions of this kind are relative and depend upon the point of view. If the cowards had to settle the question, all bravery would be deemed rashness. Hence we see that Aristotle's system depends on faith in a certain standard inherent in the general reason of mankind. The ἐμφάνισις is φθορίων λόγος. And this law or standard of the absolute reason finds its exponent in the thoughtful man, ὡς ἀν ὁ φθορίων ὁ χρησίμων.

5 ἐτὶ πρὸς μὲν—ἀπέχων.] 'Again while some extremes appear to have a sort of similarity to the mean, as, for instance, rashness to bravery, and prodigality to liberality;—the extremes have the greatest dissimilarity to each other. But things most removed from each other people define to be 'contraries,' therefore things more removed are more contrary to each other.' In the present passage it is easy to see a logical inconsistency. If contraries be τὰ πλεῖστον ἀπέχουσα, how can we speak of them as πλεῖστον ἀπέχουσα? Aristotle commences with an idea of absolute contrariety, and afterwards takes up one of relative contrariety, admitting of degrees. But repugnance admits of degrees, if contrariety does not, so the inaccuracy is merely verbal.
ινανισχθησαι ὑπερβολὴ ὀσά, ἀλλ’ ἡ δειλία ἐξελευθεροῦσα, τῇ δὲ σωφροσύνῃ ὄσχε ἡ ἀναισθησία ἑκείνη ὀσά, ἀλλ’ ἡ ἀκολογία ὑπερβολὴ ὀσά. διὰ δύο δ’ αἰτίας, τοῦτο συμβαίνει, μιὰν μὲν τὴν εἴς αὐτοῦ τοῦ πράγματος, τῷ γὰρ ἐγγύτερον εἶναι καὶ ὁμοιότερον τὸ ἐκεῖνον ἄξριον τῷ μέσῳ, οὐ τοῦτο ἀλλὰ τούπαντι ἀντιτίθεμεν μᾶλλον, οἷον ἐπεὶ ὁμοιότερον εἶναι δοξεῖ τῇ ἀνδρείᾳ ἡ δειλία καὶ ἐγγύτερον, ἀνομοιότερον δ’ ἡ δειλία, ταῦτά μᾶλλον ἀντιτίθεμεν. τὰ γὰρ ἀπέχουσα πλείου τοῦ μέσου ἐναντιώτερα δοξεῖ εἶναι, μία μὲν οὖν αἰτία αὐτή, εἴς αὐτοῦ τοῦ πράγματος, ἀπέχει δὲ εἴς ἡμῶν αὐτῶν. πρὸς ἅ γὰρ αὐτοῦ μᾶλλον πεφύκαμεν πως, ταῦτα μᾶλλον ἐναντία τῷ μέσῳ φαίνεται. οἷον αὐτοὶ μᾶλλον πεφύκαμεν πρὸς τὰς ἡδονὰς, διὸ ἡ συγκατάφορος ἐσμὲν μᾶλλον πρὸς ἀκολογίαν ἡ πρὸς κοσμίωτητα. ταῦτ’ οὖν μᾶλλον ἐναντία λέγομεν, πρὸς ἃ ἔπιστος μᾶλλον γίνεται. καὶ διὰ τούτῳ ἡ ἀκολογία ὑπερβολὴ ὀσά ἐναντιώτερα ἐστὶ τῇ σωφροσύνῃ.

7 διὰ δύο δ’ αἰτία—μᾶλλον]  
Now this takes place from two causes, one (external to us) depending on the nature of the thing itself; for that extreme which is nearer to and more like the mean, we do not oppose so much to the mean, as its contrary. The first thing, says Aristotle, which makes one extreme more repugnant to the mean than the other extreme, is a difference of kind. Some faults are errors ‘on virtue’s side,’ and while rashness, for instance, is the same tendency as courage, only carried too far, cowardice differs from it in kind. This difference then is one with which the agent has nothing to do.

ἐπεὶ δὲ—σωφροσύνῃ]  
A second cause depends on ourselves; for those things to which we are in a way more disposed by nature appear more repugnant to the mean. As, for instance, we are in ourselves more disposed towards pleasures, hence we are more carried away in the direction of intemperance, than in that of (excessive) orderliness. Therefore we call those things more contrary to the mean in which we run to greater lengths; and thus intemperance, which is the excess, seems more contrary to temperance (than the other extreme).’ Passing over the false explanation of this passage, which pretends to find in it the doctrine of human corruption—as if Aristotle said that we are by nature prone to what is worst, whereas he says that ‘what we are most prone to appears to be the worst,’ there are two modes of explanation left; one is that of the Paraphrast, who renders it, ἐπεὶ γὰρ ὁ πάλαις τῷ συνοδευῃ πρὸς τὰ ἄκρα γίνεται, τὴν μεσότητα ζητοῦσι, πρὸς δὲ τῶν ἄκρων μείζον ὡς μάχη, ἐκεῖνο ἐναντιώτερον τῷ μέσῳ δοκεῖ κ.τ.λ., namely, that there is the greatest struggle in avoiding that extreme to which we are prone, and therefore it appears most opposed to the mean. This interpretation is
slightly favoured by § 4 of the next chapter, skotein de dé k. k. t. α.; but on the other hand, not a word is here said of avoiding either extreme; the question is rather of following one’s bent. (2) The other explanation is that which the author of the *Magna Moralia* espouses, *Mag. Mor. l. ix. 5*: ἡ ὀνόματι ἐπιθέμενα γίνεται μᾶλλον πρὸς ἄπεροκατεγείραμα πρὸς ἄπε μᾶλλον ἐπιθέμενα, ταῦτα καὶ μᾶλλον ἐναίσθησις. ἐπιθέμενα δὲ πρὸς ἀκολουθίαν μᾶλλον ἡ πρὸς κοσμὁσις. This is surely what Aristotle means, and his general sense may be given as follows: ‘One difference is in the act itself, a difference of kind; the other difference proceeds from ourselves, a difference of degree, for whereas we have an inclination towards one side, we run into extravagance on that side, and so aggravate that form of error, and make it seem worse than its opposite. In order to make the words suit a preconceived meaning, people have translated ἐπιθέμενα ‘inclination,’ whereas it can only mean ‘advance,’ ‘progression,’ ‘development,’ &c. As the *Magna Moralia* give it, πρὸς ἄπεροκατεγείραμα is the ‘inclination,’ and ἐπιθέμενα is the result of this. The addition of γίνεται might have been sufficient to prevent the above misinterpretation. It is observable that σωφροσύνη is here first contrasted with κοσμόσις, as if that meant ‘asceticism,’ and afterwards the corresponding term is omitted. Aristotle seems unwilling to employ the term ἀκαθάρθητα, being too strong a word, cf. *Eth. ii. ii. 7*: ὁ δὲ πάντας φυτέων—ἀλατόθεντα τις π. viii. 3: ἐλλείποντες δὲ πεῖρας ἡδονὰς πάντα γινομένην ἰδὴ τοιὸν οὖν τοιὸν οὖν ἰδὴ τοιὸν τοιὸν ἰδὴ ἰδὴ σωφροσύνης.

IX. The book is concluded with certain practical rules for attaining the mean. (1) Avoid the worst extreme; (2) Find out your bent and go even farther than is necessary in the direction opposite to it; (3) Beware of the delusions of pleasure; (4) After all, the appeal must be in the last resort to the intuitive judgment.

2 διὸ—εἴδορος.] ‘On this account it is a hard task to be good: for it is always hard to ascertain the mean; as, for instance, not every man, but only the mathematician, can find the centre of a circle.' The words of Simouides (quoted by Plato, *Protag.* p. 339, and referred to above, *Eth. i. x. 11. *), ἀνὴρ ἄγαθον μὲν ἀλαθός γενεσθαι χαλεπὸν κ. k. t. α., may have been in the mind of Aristotle, who here gives a rationale of them, and indeed shows that it is hard not only
to become, but to be, good. συνειδητον είναι, not only γενόμενον. See Essay II. p. 95.

3 καθάπερ καὶ Ἡ Καλυψία παραει[There is a mistake here in which Aristotle is followed by the Paraphrast. It was Circe (not Calypso) who advised Ulysses (Od. xii. 108—109), when sailing between Scylla and Charybdis, to keep nearest to the former, as being less dangerous. Two of the MSS., with a view of setting Aristotle right, substitute Κίρκη for the authentic reading. The verse here given Homer puts not into the mouth of Circe, but of Ulysses ordering his pilot, according to the directions he had received (Od. xii. 219, 220).

A common Greek proverb, which is variously explained. It is sometimes said to mean 'on the voyage home, if not on the voyage out'; but it seems very much better to take the words as meaning 'with oars, if not with sails,' an explanation which is twice given by Eustathius; p. 661, δ τῶν καυχητικῶν πλοίων περιτρικτος λέγεται: πλούς, ἀλο πρῶτον δύνατον τοῦ πλούς πρὸς ἄλλον. Also in page 1453. Other instances of the proverb are Politics, iii. xiii. 23; Plato, Philebus, p. 19 α; Phaedo, 99 δ.

5 εἰς τοῦτον—ποιοσ;] 'But we must drag ourselves away in the opposite direction; for by bending ourselves a long way back from the erroneous extreme, like those who straighten crooked pieces of timber, we shall at length arrive at the mean.' The metaphor is borrowed from Plato Protag. p. 325 ν, where it is applied to education, not, however, in precisely the same sense as here. Καὶ ἔνδυμαν έκαθαριζομεν καὶ καμπτόμενον εὖ τύπου ηπειλει καὶ πληγαις.

6 εἰς παντὶ δὲ—ἀμαρτησόμεθα;] 'But in everything we must especially be on our guard against the pleasant and pleasure. For we are not uncorrupted judges in her cause. Therefore, just as the old counsellors felt towards Helen, so ought we to feel towards
pleasure, and in everything apply their saying; for by sending her out of our sight we shall err the less.'

The reference is to Homer, Iliad m. 156—160:

Oū nūmēs Tōrōs kai dēskēmōda

'Ακρων τῷ δέ αὐτῷ γενομένη πολύν χρόνον ἔλγα σύναχων.

Aīnai γὰρ πρόορον βιοῦ ἐς ἄλλον

ἀλλὰ καὶ ἔκεισα πέρ ἐσσ’ ἐν γνῶι

μὴ ήμιν τεκίσει τ’ ὁπλοσὺ πήμα λόποτα.

ἀδέλταιον ] ‘Un bribed,’ ‘uncorrupt-
ed.’ δεκαίος, the origin of which is obscure, finds a parallel in the Latin ‘decuriae,’ which meant to bribe the tribes at elections. See Cicero, pro Flancio, c. xviii. 44.

8 ὃ δὲ μέχρι τίνος καὶ ἐπὶ τῶν ψευδών ἐκείνων] a condensed phrase meaning ‘to what point and how far a man (may go before he) is blameworthy.

ἐν τῇ αἰσθήσει ἡ κρίσις] ‘The decision of them is a matter of perception.’ Aristotle meant that general rules are often inapplicable to particular cases, which must then be decided by a kind of ‘intuition’ or ‘tact,’ not derived from philosophy, but natural.

Compare m. iii. 13: ἐκεῖδι τῇ τελευταῖα πρὸς τούτοις δίδα τοῖς αἰσθητοῖς καὶ κυρία τῶν πραξεῶν. — diē τὸ μὴ καθόλου μὴ δέχοντος όρόσω τῇ καθόλου τὸν ἐκακασῶν ὄρος.

END OF THE FIRST VOLUME.
